#### I. INTRODUCTION AND BACKGROUND

During the late 1960's and early 1970's police agencies across the nation were faced with a great number of problems ranging from basic service delivery to internal management issues. As a result, considerable effort has been put forth at trying to understand some of these problems and developing programs that will help address them. One such program that came from these efforts allows police officers to take their patrol vehicles home. This program was first initiated in Indianapolis, Indiana in the late sixties. The primary purpose of the program at that time was to increase the level of police visibility in response to rising crime rates. Since that time the concept has been implemented in police agencies across the nation including six large cities and counties in the State of Virginia. In addition to increasing the presence of the police, the programs have contributed a number of positive benefits to police agencies and their communities. It is these beliefs that have motivated the department to propose a similar program for the City of Newport News. The Newport News Police Department recognizes it's responsibility to make every effort to improve the methods through which police service is provided. It is very clear over the past couple of years the department is willing and able to develop and implement programs aimed at fulfilling that responsibility. It is believed a changeover from a predominately fleet pool vehicle program to a predominately take home patrol fleet will further enhance the ability of the department to provide

Ŧ.,

efficient and effective service.

The department is calling this effort a Community Oriented Police Patrol (COPP) Program because of the focus on providing marked police vehicles to officers residing within the city limits. By the end of the five year implementation of the plan the visibility of the department will be greatly enhanced and result in a higher sense of security.

#### A. Visibility

The Community Oriented Police Patrol fleet places the majority of marked police vehicles in the residential neighborhoods of the city rather than at two locations at opposite ends of the city. In those neighborhoods where officers live and the routes to and from their residence it is hoped the presence of these additional marked police vehicles will act as a deterrent to both the desire and opportunity of those intent on committing crimes. In a recent police study by the County of Arlington, Virginia it was determined that in the areas where an assigned marked police unit was parked at the officer's home, a close correlation between the presence of the unit and the reported burglaries within the proximity of where the vehicle was parked was established. It was hypothesized that other crimes would be similarly deterred.

A Community Oriented Police Patrol Program mobilizes off duty

vehicles and personnel primarily in residential neighborhoods whenever they are used. In addition, merchants similarly benefit from the program by off duty personnel conducting business in marked police vehicles in and around the establishments at which they are conducting business.

Much has been written about the impact of a marked police patrol unit on reported crime and citizen satisfaction. Until a study was conducted by the Kansas City Missouri Police Department in the early 1970's there was no empirical evidence establishing any type of relationship. While this well known study essentially concluded in routine patrol operations the marked unit in random patrol during non-committed time had no significant impact on reported crime, it continues to be the most misunderstood study of police operations. Needless to say, at the time a police unit is present it has an impact on both the general citizenry and those about to commit a crime. The COPP program will increase that impact because of the increased number of units while fully recognizing the inability of the police to attain that level of sustained saturation necessary to prevent that element of society which possesses a great desire to live a life of crime.

#### B. Enhanced Service

Increased mobile visibility places a responsibility upon off

duty personnel, operating Community Oriented Police Patrol vehicles, to react positively to certain matters requiring police intervention. This intervention would come in the form of taking action when these types of incidents are observed, responding to emergency calls for service when in the immediate vicinity, and in providing backup assistance to units when needed. The extent of involvement obviously is determined by the nature of the incident and the availability and timely response of on duty units to provide the needed assistance. Programs implemented in other cities has shown the off duty unit has reduced the need to use on duty personnel as backup and/or primary responding unit. Some examples are:

į.

The City of Jacksonville, Florida determined in 1977 that a total of 53,150 calls (or 11%) were handled by off duty officers. This approximated the number of calls that jurisdiction handled in one month. Of those calls, 14,381 concerned citizens who required traffic related assistance from off duty officers. A total of 259 drunk drivers were processed and 525 accidents with injury were responded to.

Prince George County, Maryland indicates that in 1979 of a total of 283,547 calls for police service 33,116 (or 11%) were handled by off duty officers. In that year the departmental average for sworn officers was 555.

Both jurisdictions indicate that many of the calls handled were of a life saving nature and the success of their

endeavors was directly related to the off duty officers proximity to the call.

As part of the quid pro quo for the program in other cities officer's did not receive compensation for handling many of these activities. Each jurisdiction receiving attention for the study provided no compensation until the off duty officer's involvement exceeded two hours. In the City of Jacksonville, Florida work was performed that would have cost \$104,838.38. This was based on the conservative estimate that each off duty officer spent only fifteen minutes on each activity. In another example Portsmouth, Virginia, with a total of 205 sworn officers (1982), estimated a savings of \$53,000 in salaries with no fringe benefits attached.

In addition to the enhanced service capabilities described above there are times when rapid mobilization of personnel is necessary. Depending on the circumstances, the range of mobilization may vary from calling out a single officer for a specialized task to the mass gathering of personnel for policing a large scale situation. Experience in Henrico County has shown that when personnel have the availability of a Community Oriented Police Patrol vehicle, response times are much lower. Moreover, they are much more effective because radio equipment provides responding officers with an ongoing

update of the status of the call out and the response could be better controlled.

#### C. Reduced Maintenance Costs

A Community Oriented Police Patrol Program should impact favorably upon "down" time for both officers and vehicles. Current practices require most vehicle maintenance to be performed while personnel are on duty. This includes servicing of vehicles with gas and oil, equipment changeovers, minor repairs, and cleaning. Associated with performing these functions is the necessity to leave assigned areas within a duty tour. Moreover, when a vehicle is removed from service for such matters as routine preventive maintenance and/or major repair work, that vehicle is lost for road service until its return. The impact of this places strain on those vehicles remaining in service by requiring more than normal use within each 24 hour period that a vehicle under repair is out of service. The Community Oriented Police Patrol Program drastically reduces the negative impact of these practices because each is handled when the officer is off duty. Once the Community Oriented Police Patrol Program is fully implemented officers with personally assigned vehicles would use fleet vehicles when their own vehicle requires extended maintenance. Also, pool vehicles and Community Oriented Police Patrol vehicles needing emergency repairs would

necessitate taking an officer off the street for vehicle repairs. The obvious benefit is more road availability for on duty personnel by freeing them from maintenance requirements and by leaving them in their assigned areas for longer periods of time. Also, the strain on the pooled fleet is reduced; hence a more efficient operation is attained. The City of Portsmouth, for example, estimated an 18.2% increase in availability by virtue of the personal vehicle program.

#### D. Improved Care

The general appearance and mechanical condition of individually assigned vehicles is expected to improve.

Officers taking personal pride in their vehicles has been the basis for lost reductions in other locations.

Heretofore, less than responsible attitudes toward vehicle condition was the rule rather than the exception and those abusing them were difficult to identify. Under a Community Oriented Police Patrol Program irresponsible persons will be readily identified and training efforts can be directed to correct their deficiencies. Most officers, upon realization that a Community Oriented Police Patrol vehicle is their "personal office" and with the understanding that the condition of their vehicle is a personification of their own sense of pride, will put forth the extra effort that does not now exist. Close scrutiny by supervisory personnel will

help reinforce the need for proper vehicle care.

By using the same rationale, traffic crashes involving police vehicles are also expected to decrease. Prince George County, Maryland realized a 23% reduction in crashes and Portsmouth, Virginia realized a similar percentage of reduction in costs associated with police crashes. The Hampton Police Department reports they have not "totaled" any vehicles since adopting the program. Prior to the take home program it was not unusual to have several vehicles a year that were involved in accidents and damaged beyond repair. These departments studies show similar reductions on a nationwide basis in cities with the program.

#### E. Officer Satisfaction

There are other aspects of the Community Oriented Police
Patrol Program that are mutually beneficial to both the police
department and the individual officer. In the area of
recruitment, the promise of a personally assigned vehicle
(upon completion of the minimum time requirement) can become a
valuable selling point since other agencies in the area
already have the program. With all other things being equal,
the success of recruitment efforts would be significantly
enhanced by a Community Oriented Police Patrol vehicle. More
available on duty time and additional service by off duty

personnel have already been projected. This fact, coupled with the recruitment enhancing philosophy inherent in a Community Oriented Police Patrol Program will allow the police department to be more selective in the hiring of prospective applicants, in that the career minded officer would be attracted to the City of Newport News.

Individual appreciation for the Community Oriented Police
Patrol vehicle program is expected to serve as a positive
factor toward improving job satisfaction within the police
department. The perception of the Community Oriented Police
Patrol Program as an individual benefit should result in a
higher quality and quantity of work performed.

A basic requirement for participating in the program is the officer must live within the city limits. It is recognized that excluding those living outside of the city may have a negative effect on job satisfaction among those not issued vehicles. Current projections indicate about 25% of the officers eligible for the program over the next three years will not live in the city limits for various reasons (see Appendix A). Some of this is a conscious decision to exclude themselves from the program for reasons that are apparently more important than the program. For others, the decision not to live in Newport News was made several years ago and

relocation costs make a move impractical. The combination of these groups is still much smaller than those eligible for the program and it is believed the positive aspects of the program greatly out weigh any negative impacts on those not eligible because of the residence requirement. An inquiry with the City Attorney has indicated that he believes it is a valid policy to restrict vehicle assignments to those officers living within the city. Moreover, the program may be a positive incentive to encourage officers in the future to locate their permanent residence within the limits of Newport News thereby reducing the percentage of officers outside of the City over time.

The Newport News Police Department believes the implementation of the COPP program will further contribute to the overall goal of providing efficient and effective police service to the community. The following sections of this proposal will address the COPP plan in greater detail to include costs associated with both plans, policies and procedures, and questions one would expect to arise in considering the program.

#### II. AN EXAMINATION OF THE TWO TYPES OF PROGRAMS

#### A. Current Fleet Operations

In order to draw conclusions on the feasibility of going to a take home vehicle program it was necessary to examine the current practice of using a vehicle pool to meet the transportation needs of the patrol function. The Patrol Division vehicle pool consists of 55 units, excluding special purpose equipment such as the tactical unit van and motorcycles. These vehicles are generally used by more than one person and replaced at intervals of two to three years depending on mileage, operational costs and overall condition. They usually have accumulated around 100,000 miles by the time they are replaced.

The cost of the pool patrol fleet is estimated at \$.34 per mile based on driving 1.6 million miles a year. This figure was calculated by using purchase price, depreciation, maintenance, and operational costs. This averages out to be about \$9,760.00 per vehicle a year. Using these basic figures, increasing the pool fleet to 60 vehicles, and using a 7% rate of inflation over the next five years, by 1989 a fleet vehicle will cost \$.45 for each mile of operation, or \$12,800.00 per vehicle, per year.

In order to maintain the current pool program over the next

five years, the costs have been estimated to be \$4,760,000.00, which includes the purchase of 115 vehicles over that period of time.

#### B. Fleet vs. Take Home

The following comparison is based on the present operating fleet of pool vehicles and the proposed Community Oriented Police Patrol Program. A cost analysis has been done on the current fleet program and the proposed Community Oriented Police Patrol Program. Costs related to fuel, repair and maintenance, vehicle depreciation, and equipment replacement and acquisition have been determined for both programs.

During FY84/85 it was determined that the present fleet of 57 vehicles would accumulate a total of 1,600,000 miles at a cost of \$.34 per mile. Annual total cost for the fleet would be \$804,526.00. Per vehicle, operational costs are \$9,666.67 yearly. In contrast, it was determined that the proposed Community Oriented Police Patrol Program fleet of 74 vehicles would accumulate 1,644,000 miles at a projected per mile cost of \$.33. Annual total cost for the Community Oriented Police Patrol Program fleet would be \$853,888.00 with an increase in fleet size of 30 percent, an increase in mileage of 4 percent, and an increase in cost of only 7 percent, or \$49,362.00. Per vehicle operational costs for the Community Oriented Police

Patrol Program are projected at \$7,375.68 annually, which is 31 percent lower in cost per vehicle per year. (See Figure 2.1 and 2.2).

During FY 84/85 it was determined that a pool fleet of 60 vehicles would accumulate a total of 1,699,000 miles at a projected cost of \$.36 per mile. 1 Annual total costs were computed \$885,418. Operational costs per vehicle would be \$10,327.17 annually. The Community Oriented Police Patrol Program fleet of 90 vehicles is expected to accumulate 1,956,500 miles during FY85/86 at a projected per mile cost \$.34. The annual total cost for the Community Oriented Police Patrol Program would be \$952,553. Vehicle operational costs for the COPP would be \$7,330.00 annually. This is a decrease of \$2,997.11 per vehicle which represents 41 percent decrease in cost per vehicle per year. (See Figures 2.3 and 2.4).

During FY86/87 it was determined the pool fleet of 60 vehicles would accumulate a total of 1,699,000 miles at a cost of \$.39 per mile. Annual total cost for the fleet is projected to be \$953,495. Operations costs per vehicle are \$11,151.67 yearly. In contrast, it was determined that the proposed COPP fleet of

<sup>1.</sup> Fleet increased to 60 vehicles for projected department expansion

97 vehicles would accumulate 1,990,000 miles at the projected per mile cost of \$.36. Annual total cost for the COPP fleet would be \$1,030,669 with an increase in fleet size of 62 percent, an increase in mileage of 17 percent and an increase in cost of only 8 percent or \$77,174. Single unit operational costs for COPP are projected at \$7,318.68 annually or a decrease of \$3,833.11 per vehicle, a 52 percent decrease in cost per vehicle. (See Figures 2.5 and 2.6).

In the FY87/88 it was determined that the pool fleet of 60 vehicles would accumulate a total of 1,699,000 miles at a cost of \$0.42 per mile. Annual total cost for the fleet would be \$1,022,883. Per vehicle operational costs are \$11,976.17 yearly. In contrast, it was determined the COPP fleet of 105 vehicles would accumulate 2,023,500 miles at a projected cost of \$0.37 per mile. Annual total cost for the COPP fleet would be \$1,085,455 with an increase in fleet size of 75 percent, an increase in mileage of 19 percent and an increase in cost of only 6 percent or \$62,572. Single unit operational costs for COPP are projected at \$7,212.43 annually or a decrease of \$4,763.00 per vehicle, a 66 percent decrease in per vehicle cost. (See Figures 2.7 and 2.8).

During FY88/89 it was determined that the pool fleet of 60 vehicles would accumulate a total of 1,699,000 miles at a cost

of \$0.45 per mile. Annual total cost for the fleet would be \$1,093,651. Per vehicle operational costs are \$12,800.67 yearly. In contrast, the COPP fleet of 114 vehicles would accumulate 2,070,000 miles at the projected per mile cost of \$0.39. Annual total cost for a COPP fleet would be \$1,154,832 with an increase in fleet size of 90 percent, an increase in mileage of 22 percent and an increase in cost of only 6 percent or \$61,181. Single unit operations costs for COPP are projected at \$7,081.58 annually, an 81 percent decrease in cost per vehicle per year.

Percentage of Decrease Per Vehicle	81%

As shown in Figure 2.11 the total projected cost of the COPP plan is expected to be \$5,077,397 as compared to the pool plan at \$4,759,973 over the five year period of implementation. This is a difference of \$317,424 over the five years or a budgetary impact of approximately \$65,000 a year over current expenditures for patrol transportation costs. This is obviously not a significant budgetary impact when one considers the potential benefits of the program previously discussed and the potential opportunity to increase productivity both on and off duty.

An examination of the following graphs will more clearly show the comparisons between continuation of the predominately pool operation as opposed to the COPP program. Figure 2.12, for example, clearly indicates the COPP program is more costly on an annual basis than the pool operation. The key question here is whether or not the additional costs are worth the expected benefits. It is believed they are by those in policing. Figure 2.13 also indicates higher operational costs. The primary reason for the higher operational costs comes from a greater number of miles being driven annually as indicated in Figure 2.14. However, the cost operating each vehicle declines significantly as indicated in Figure 2.15.

The comparison of the two programs suggests the benefits of

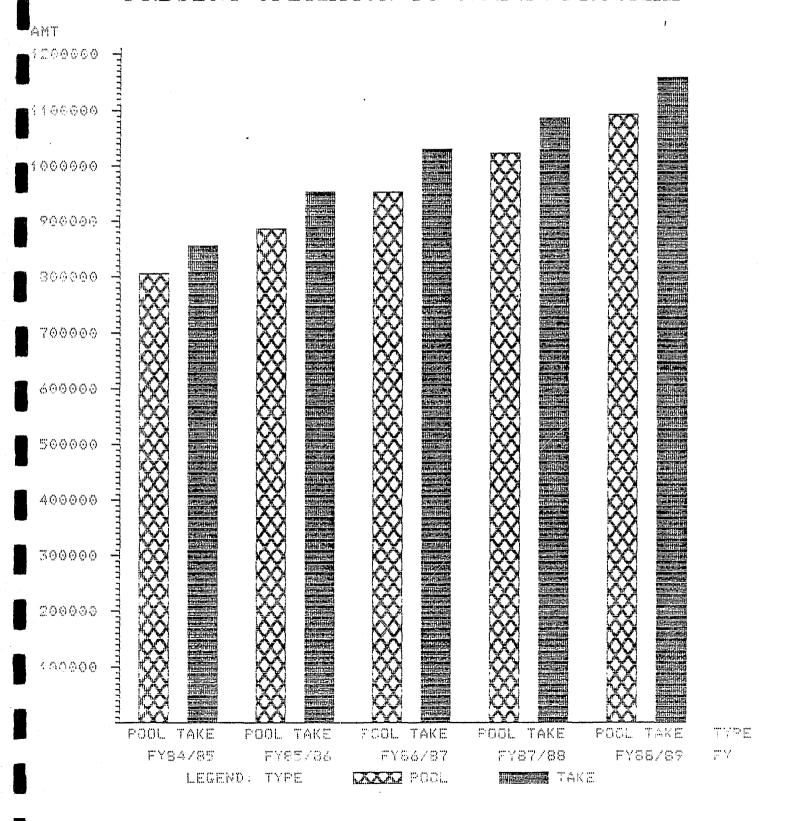

the additional cost of COPP are worth the investment. The actual description of the proposed program follows in Section III.

#### III. THE COPP PROGRAM IMPLEMENTATION

#### A. Program Overview

After examining the advantages and disadvantages of the pool fleet system as opposed to the take home concept and the corresponding costs, the department believes the take home plan offers some significant advantages. Actually the program being proposed is a combination of a pool and take home plan. Because of some of the self imposed restrictions for eligibility for participation it will be necessary to operate a pool of 28 vehicles when the plan is fully implemented in fiscal year 1988/89. For an officer to be eligible to participate in the program the following conditions must be met:

- 1. Be assigned to the Patrol Division.
- Reside within the jursidictional boundaries of the City of Newport News.
- 3. Have completed two continuous years of employment with the department.
- 4. Have a good performance and driving record.

These restrictions will exclude a number of officers and make

it necessary to maintain the vehicle pool.

In order to minimize the immediate fund outlay and to provide for a smooth transition with implementation the COPP plan has been phased over the next five fiscal years. Figure 3.1 shows the conversion to full implementation over this period. The first year of the program requires that a fleet of 40 pool vehicles be maintained. In addition to eleven vehicles currently being taken home eight vehicles from the present fleet would be converted to COPP use, augmented by 33 newly purchased vehicles. With the replacement of only four vehicles and the addition of two vehicles (an additional Deputy Chief and an additional K-9 unit) a total of 34 COPP vehicles would be phased in during the first year. First year operational costs for a fleet of 74 vehicles if projected to be \$545,000 or \$.33 per mile based on 1,664,000 miles of operation. Per vehicle operational costs are projected to be \$7,375.00 per year. Total first year costs including operation, vehicles and equipment are projected to be \$853,888.00.

During the second year, the needs for a motor pool would be reduced to 33 vehicles. An additional 21 vehicles would be purchased thus providing 23 more COPP vehicles including six converted pool vehicles and four replacement vehicles for a total of 57 COPP vehicles. Second year operational costs for

a fleet of 90 vehicles is projected to be \$659,705 or \$.34 per mile based on 1,956,500 miles of operation. Per vehicle operational costs are projected to be \$7,330.06 per year. Total second year costs including operation, vehicles and equipment are \$952,553.

In the third year, the needs for a motor pool would be reduced to 32 vehicles. An additional 22 vehicles would be purchased thus providing 8 additional COPP vehicles including three converted pool vehicles and 14 replacement vehicles bringing the total of COPP vehicles to 65. Third year operational costs for a fleet of 97 vehicles are projected to be \$709,900 or \$.36 per mile based on annual mileage of 1,990,000. Per vehicle cost are \$7,318.56 per year. Total cost including operation, vehicles and equipment are \$1,030,669.00. It is significant to note that by the third year, 62 percent more cars would be available at an increase in cost of only 6 percent.

During the fourth year, the motor pool will be reduced to 31 vehicles. An additional 22 vehicles will be purchased providing 12 replacement vehicles and the addition of 9 COPP vehicles for a total of 74 COPP vehicles. Fourth year operational costs for a fleet of 105 vehicles are projected to be \$757,305 or \$.37 per mile based on 2,023,500 total miles

per year. Per vehicle operational costs are \$7,212.43 per year. Total costs including operation, vehicles, and equipment are \$1,085,455.

In the fifth and final year of implementation, the motor pool will require 28 vehicles. An additional 22 vehicles will be purchased providing 12 replacement vehicles and an additional 12 COPP vehicles for a total of 86 COPP vehicles. Fifth year operational costs for a fleet of 114 vehicles are projected at \$807,300 or \$.39 per mile based on 2,070,000 miles per year. Per vehicle operational costs are \$7,081.58 per year. Total cost during the fifth year including operation, vehicles, and equipment are projected at \$1,154,832.

Total cost for the COPP program including operational costs of \$3,476,410.00 total vehicle costs of \$1,365,642.00, and total equipment costs of \$235,345.00 is \$5,077,397.00. Figure 3.2 is a graphic display of the total patrol fleet size as well as COPP and pool.

In order to maintain the number of pool vehicles necessary for patrol operations and to build a COPP fleet, about the same number of new vehicles must be purchased each year as our current plan. The cost of implementing a COPP program could be reduced through the reconditioning of vehicles normally

sold at auction. However, reconditioned vehicles, beyond those already in use have not been considered at this stage because of the uncertainty of the viability of the program on the long run. Additionally, vehicle replacement projections are based on industry standard mileage for work vehicles and although this standard is used during initial implementation of the program some vehicles may be replaced below industry standard mileage due to poor condition or excessive operational costs.<sup>2</sup> It is projected that with full implementation of the COPP program a fleet of 114 vehicles will be available with a life expectancy of six years for each vehicle.

#### B. Personnel Projections

While gathering data to determine how many of the 145 personnel currently assigned to the Patrol Division would be eligible for participation in a COPP program a survey of the officers was conducted.<sup>3</sup>

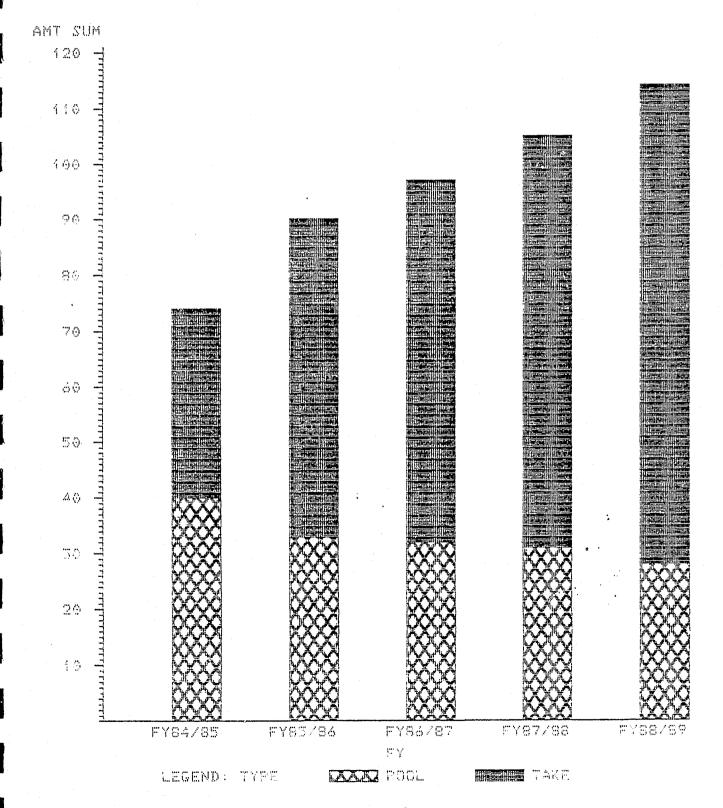

Based on this survey, it was determined that during the first year of implementation 36 officers or 25 percent of the

<sup>2.</sup> Industry standards is 100,000 miles.

<sup>3.</sup> The survey was done on 08/01/84 using the survey form shown in Figure 3.3.

# FIVE YEAR CONVERSION

# POOL TO TAKE HOME VEHICLES

personnel assigned to the Patrol Division would not be eligible to participate because they have less than two years of continuous employment with the police department. In addition to the 36 officers above, 31 officers or 21 percent would be ineligible because they live outside of the City of Newport News and are unwilling to relocate to participate. Of those remaining, 3 percent live in the City of Newport News and are eligible but do not wish to participate and 51 percent are eligible and do wish to participate in the COPP program.

During the second year of implementation of the COPP program 32 officers or 21 percent of the personnel assigned to the Patrol Division are not eligible to participate as they have less than two years of continuous employment with the police department. Additionally, 34 officers or 22 percent would not be eligible because they live outside the City of Newport News and are not willing to relocate. Five officers, or 3 percent, living within the city do not wish to participate. During the second year 84 officers, or 54 percent are eligible and interested in participating in the COPP program while 71 officers, or 46 percent are not eligible or do not wish to participate.

<sup>4.</sup> Estimated the Patrol Division would be expanded to 155 officers.

During third year implementation of the COPP program 34 officers or 22 percent of the 155 officers assigned to the Patrol Division would not be eligible to participate in the program as they have under two years continuous employment with the police department.<sup>5</sup> It is estimated that we would continue to have 24 percent of the officers living out of the city and unwilling to relocate and 5 officers, or 3 percent would not be interested in participating in the program. During the third year 79 officers or 51 percent are eligible and interested in participating in the COPP program. Fourth and fifth year personnel projections were not attempted during this study. As a result of resignations, retirements, transfers and other departmental processes it was felt that any further attempt at projecting personnel eligibility would not be meaningful. Given the consistency of the first three years of projections it was felt an average for the final two years would be appropriate. This average is charted in Figure 3.4 which summarizes personnel projections for the five year period.

#### C. Neighborhood Parking Location

A lay aspect of the COPP program is the impact on the community from the standpoint of enhancing the visible presence of the police. Based on current data the residences where the vehicles would be located each year through the implementation of the program has been plotted on Figures 3.6 through 3.10. As one can see the vehicles are fairly well distributed throughout the city with the majority falling in between Mercury Boulevard and Denbigh Boulevard.

#### D. Evaluation

The primary goal of the COPP program in the City of Newport
News is to provide more efficient and effective police service
to the citizens of Newport News. The major objectives of the
COPP program are:

- To enhance the overall visible presence of the police by virtue of more police.
- 2. To decrease the overall response time to emergency calls for service through the use of off duty units providing an initial response when in the vicinity of the call.
- 3. To decrease the "down" time for patrol vehicles through improved maintenance, vehicle care, and servicing of

Figure 3.6

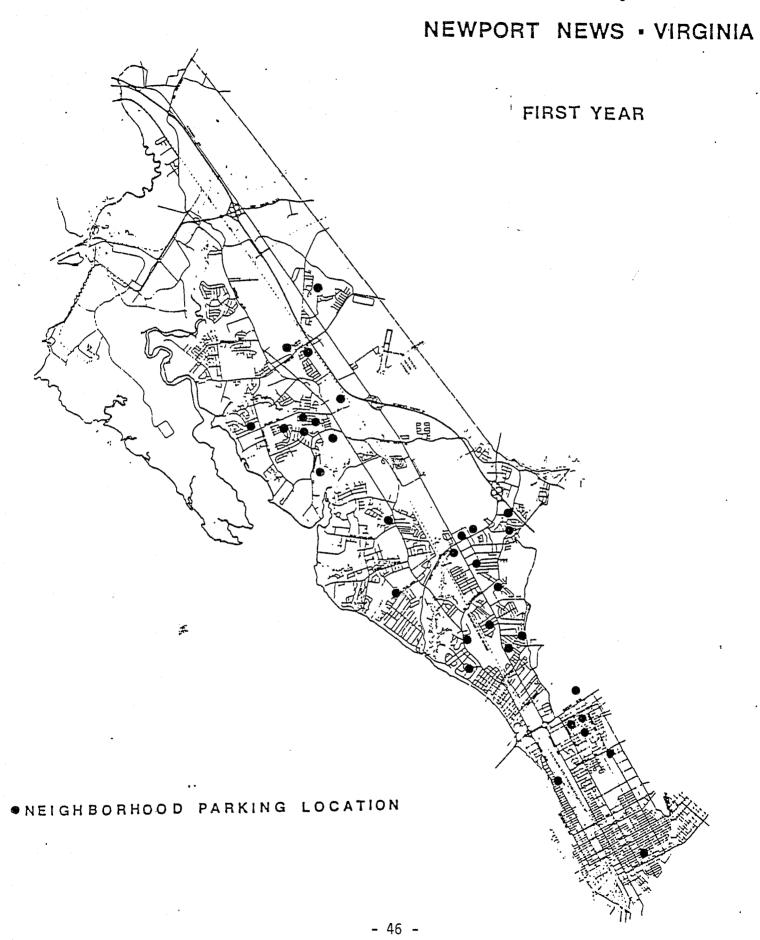

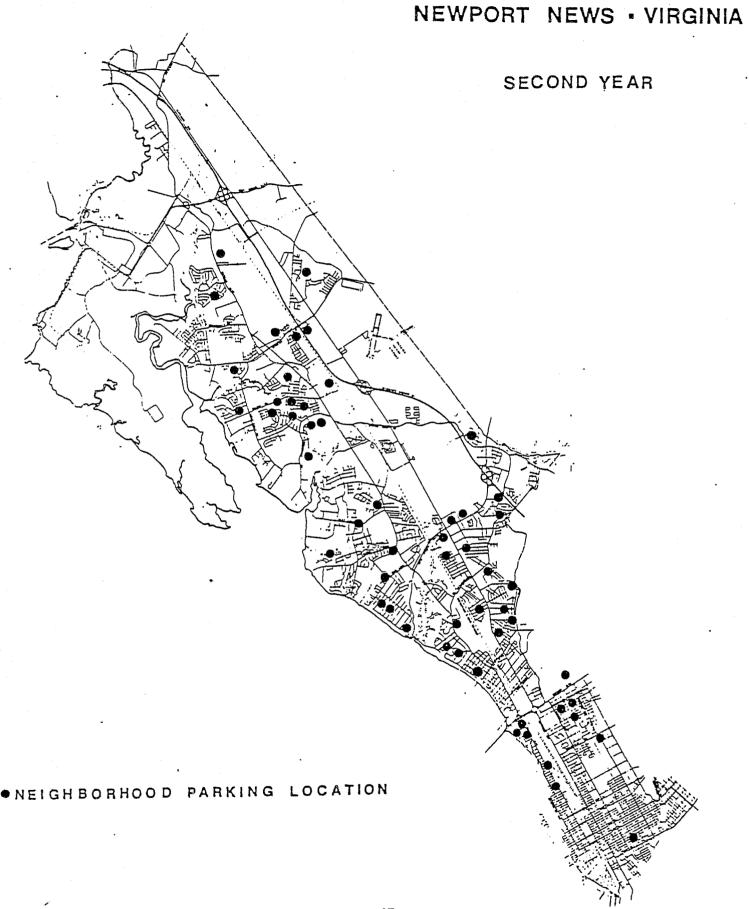

Figure 3.7

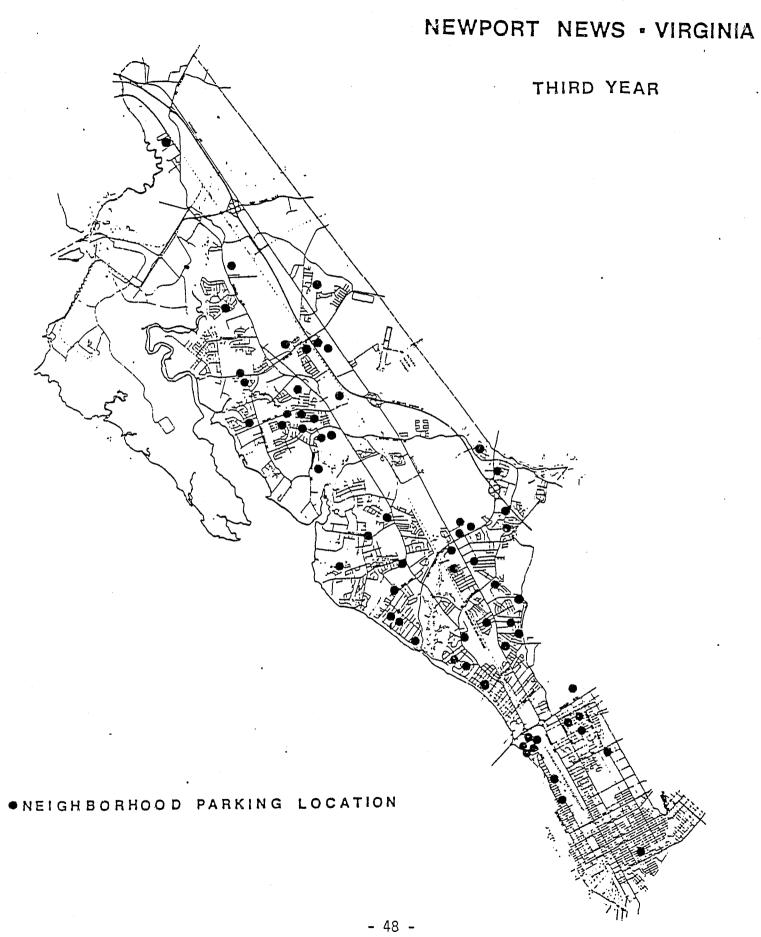

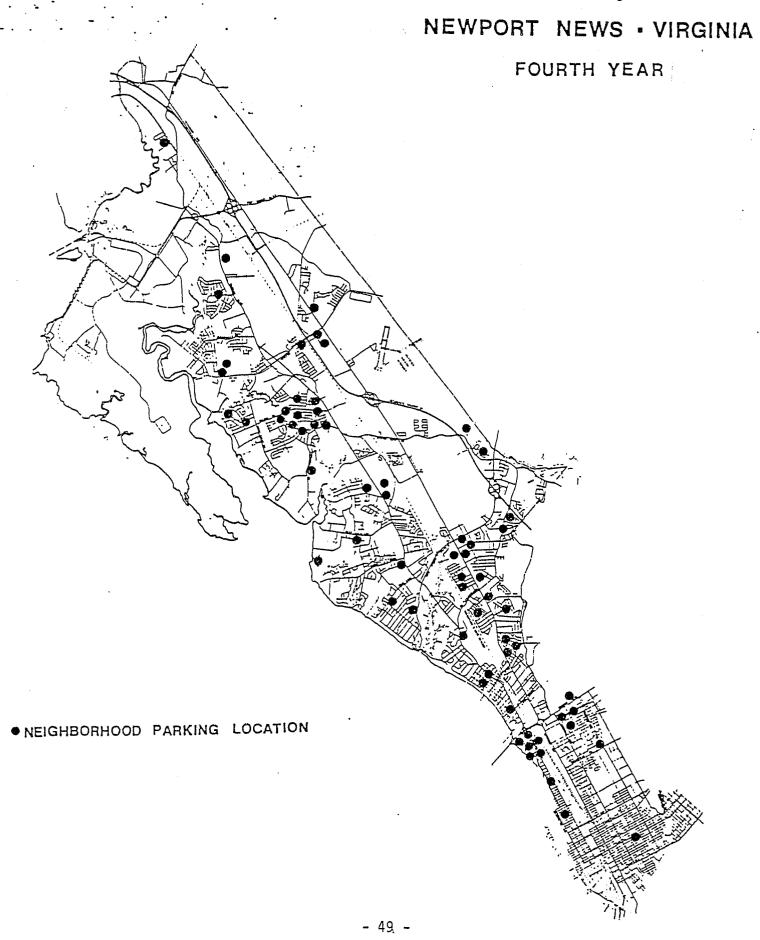

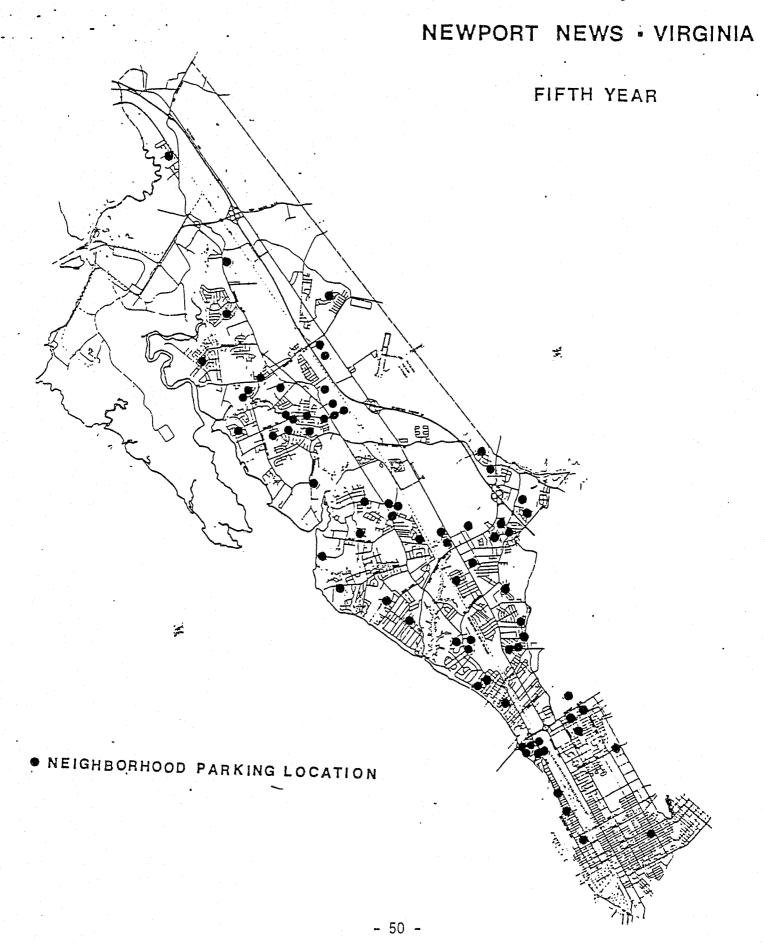

Figure 3.9

during officer off duty time, thereby increasing on duty patrol time.

- 4. To increase patrol time by decreasing time devoted to vehicle maintenance activity while on duty.
- 5. To reduce the operational cost of each vehicle and extend the vehicle's life span.

In an effort to judge the ability of the COPP Program to meet the objectives it has been necessary to develop a series of forms to collect some of the needed data. (See Appendix D). It has also been necessary to develop a detailed policy and procedure to outline the conditions under which the vehicles may be used. (See Appendix C). These methods will help ensure the program is accomplishing the purpose for which it was designed.

#### IV. SUMMARY AND CONCLUSION

After examining the relative merits of continuing the department's current vehicle pool transportation and the alternative COPP program the department is proposing a five year phased implementation of the latter. As has been shown the cost of the COPP program was estimated at being about \$350,000 more to bring the patrol fleet to 114 vehicles necessary to implement the plan. Although the overall cost is greater it is believed the advantages clearly outweigh the additional cost. These advantages include:

- \* Visibility When fully implemented, the advantage of the visible patrol unit will be significantly enhanced.
- \* Enhanced Service The department will be able to reduce on-duty time cost to vehicle maintenance and should increase the ability to respond to emergency calls for service.

  Officers will also be expected to handle routine matters coming to their attention when using the vehicle off-duty.
- \* Reduced Maintenance Cost It is expected that officers will take greater care of a vehicle for which they are totally responsible which

will aid in reducing maintenance costs
associated with lack of care. The program will
also significantly extend the life of the
vehicles. Moreover, maintenance would be
conducted on an appointment basis by officers
when they are not on duty.

\* Enhanced Officer Satisfaction - It is expected the program will have a positive effect on officer satisfaction with employment conditions. COPP will allow the Newport News Police Department to join other agencies of similar size in the area that already have the program. It is also the type of program that can be viewed as a benefit to both the employee and the department.

Cities with the program currently in operation have already demonstrated one can expect these types of advantages.

While every effort has been made to cover all aspects of the program in the plan one obviously cannot predict the future with total certainty. However, it is believed the projections are as realistic as they can be with current knowledge. The only factor that could change which would have a major impact on the program

would be in the numbers of officers eligible and this is considered to be unlikely. Even with this uncertainty it is believed the program is well worth the additional investment required because of the high potential for improving the quality of service provided to the citizens of the City of Newport News.

APPENDIX C

POLICY AND PROCEDURE

# Policy & Procedure

Subject:

Community Oriented Police Patrol Program

No.	1	of	7	pgs
Effective Date;				`.
Issued By: DWS	Dist	ribut	ion: $Al$	:1
Amends/ Supercedes:		-1		

#### I. PURPOSE

To establish guidelines for the conduct and administration of the Community Oriented Police Patrol Program (COPP).

#### II. POLICY

It is the policy of the Newport News Police Department to implement and maintain a program through which officers who reside in the City have the opportunity to be assigned a vehicle to drive on and off duty. This program is in keeping with the departments overall goal, which is "To provide efficient and effective police service to the citizens of Newport News, Virginia". To meet this goal, the objectives of the COPP Program are:

- A. To increase the visibility and availability of marked police vehicles throughout the city, and
- B. To decrease average vehicle costs through increased vehicle life and decreased maintenance and repair costs.

#### III. PROCEDURES

#### A. Administration

- 1. The Patrol Division Commander will be responsible for administration of the COPP Program. He will ensure that the officers activities involving this program are monitored and that any indiscretions are investigated.
- 2. The Patrol Division Commander will be responsible for monitoring maintenance performed on COPP vehicles and for the correction of deviations from these guidelines.
- 3. Participants in the program will be required to sign an agreement between the participant and the department. This agreement will outline the equipment issued to the participant and will serve as notice that the participant understands that the assignment of a vehicle in this program is considered a privilege and not a requirement. It will also serve as acknowledgement that the participant is aware and is willing to observe all policy and procedure and any directive concerning the COPP Program.
- 4. Decisions of eligibility for the COPP Program will rest entirely with the Patrol Division Commander.
- 5. Any recommended probation, suspension, or termination from the COPP Program as a result of preventable accidents will

be made by the Accident Review Committee with the final decision resting with the Chief of Police.

#### B. Eligibility

- 1. Eligibility for participation in the COPP Program is limited to sworn police personnel who:
  - a. Are assigned to the Patrol Division.
  - b. Reside within the jurisdictional boundaries of the City of Newport News unless otherwise authorized by the Chief of Police.
  - c. Have completed two continuous years of employment with the Newport News Police Department.
- 2. An officer may be determined ineligible for participation in the COPP Program if his accident records reflect a history of preventable accidents attributable to negligence and/or a disregard for established policy and procedure.
- 3. Eligibility for the COPP Program in and of itself does not guarantee assignment of a vehicle nor are eligible officers required to participate in the program. Noncompliance with eligibility requirements will be grounds for immediate termination from the program.
- 4. If an officer assigned a COPP vehicle under this program moves outside of the city limits of Newport News, his participation in the program will terminate and the COPP vehicle will be assigned to the next eligibile officer.

#### C. Vehicle Assignment

- All police vehicles maintained in the COPP program will be marked police vehicles with the exception of the Deputy Chief, Major, and the Patrol Captains or any other vehicles authorized by the Chief of Police.
- 2. Five year phase in of the COPP program shall be accomplished by assigning first year vehicles to patrol officers based only on seniority. Second through fifth year phase in shall be accomplished by assigning vehicles based solely on senority without regard to rank. Radar units will be maintained as pool vehicles until additional radar units become available for COPP vehicle assignment.

#### D. Availability

1. Officers must be capable of responding to calls in an emergency. To this end, it is essential that officers be suitably

- attired when operating a COPP vehicle off duty, so that their appearance at the scene of an emergency will reflect favorably on the officer and the Newport News Police Department.
- 2. Officers assigned a COPP vehicle in this program will carry an official department identification or badge and their issued service revolver or authorized off duty weapon at all times while operating a COPP vehicle off duty.
- 3. Officers assigned a vehicle in this program and operating the vehicle off duty shall keep the police radio on at all times and shall remain alert to radio traffic.
- 4. If an off duty officer operating a COPP vehicle encounters an automobile crash he will notify Central and render any assistance necessary until his presence is no longer needed.
- 5. Officers assigned COPP vehicles will park their vehicle at the North Patrol Station or the South Patrol Station for safe keeping when the officer is to be off duty and away from the vehicle's normal parking location for a period exceeding four days.
- 6. Officers receiving workmans compensation benefits or who are performing authorized light duty functions when on duty shall relinquish the use of their COPP vehicle until they return to normal duty status. If workmans compensation or light duty status is to be of an extended nature a COPP vehicle may be reassigned in which case an officer returning to normal duty status after an extended absence or extended light duty status would receive the next available COPP vehicle.

#### E. Compensation

- 1. Officers assigned COPP vehicles in this program, who become involved in any off duty police activity will not begin to receive compensation until involvement in that activity exceeds two hours. By accepting a COPP vehicle the officer agrees to work the first two hours of any off duty police activity without compensation. It is the responsibility of the officer to have an on duty supervisor sign any overtime/compensatory time slip for any off duty activity which exceeds two hours. This provision, in no way denies full overtime compensation to personnel assigned COPP vehicles, for on duty assignments which extend beyond normal work schedules or to those who are requested to work additional hours beyond normal scheduling.
- 2. When an off duty officer, assigned a COPP vehicle, becomes involved in any official off duty police activity and is injured as

as the result of that activity, workmans compensation claims will follow the same procedure as if the officer was on duty when injured.

3. If, while operating a COPP vehicle off duty and while involved in no police activity an officer is involved in a vehicle crash, the officer is covered by normal insurance provided under the City's self insurance program. However, an officer will not be eligible for coverage under workmans compensation benefits.

#### F. Vehicle Operation

- 1. All policies and procedures of the Newport News Police Department shall remain in effect while assigned COPP vehicles are operated either on or off duty.
- 2. Normal radio procedures shall be followed by off duty officers opprating COPP vehicles except:
  - Officers operating COPP vehicles off duty will continue to use their normal on duty radio channel.
  - b. Off duty officers operating COPP vehicles will use their computer number proceeded by the number nine as their unit identifier (example computer number 269 would become unit 9269).
  - c. Off duty units shall limit radio traffic to a minimum.
    Contact with Central will be made only when a police activity is initiated.
  - d. When circumstances dictate, watch supervisors or Central personnel may request the location of off duty units.
  - e. COPP vehicles will only be operated by authorized police personnel.
  - f. Unattended police vehicles will be locked at all times.
- 3. Officers assigned COPP vehicles will exercise prudence in the use and operation of their vehicle to maximize vehicle life expectancy and operating efficiency. No special privileges are to be assumed such as exceeding posted speed limits or parking in restricted zones.
- 4. Any off duty officer discovering damage to his vehicle or who becomes involved in an automobile crash will immediately notify an on duty watch supervisor.
- 5. Officers assigned a COPP vehicle will not use that vehicle in conjunction with the purchase, transportation, or consumption of alcoholic beverages.

- 8. Officers operating COPP vehicles off duty are not expected to enforce all traffic laws; however, when an officer observes a flagrant violation he will be expected to take appropriate action.
- 9. Whenever an off duty officer operating a COPP vehicle becomes aware of a call for service to which his response may result in the prevention of a crime or the arrest of a perpetrator, the officer shall, after advising Central of his proximity to the incident, respond to the call provided he is not cancelled by a watch supervisor or Central personnel. When responding to calls for service while off duty and operating a COPP vehicle the officer shall respond as if he were on duty and all directives, policy and procedure shall be adhered to. Any off duty officer cancelled by a watch supervisor or Central shall not respond to the scene of a crime or other incident.
- 10. The transportation, while off duty, of family members and friends is permissible in COPP. However,
  - a. The officer is solely responsible for the conduct and safety of all passengers riding in a COPP vehicle.
  - b. Under no circumstances will an officer respond to an emergency situation with non-sworn personnel in his vehicle. Non-sworn personnel riding in a COPP vehicle will be off loaded in a safe and convenient location prior to responding to any call.
- 11. Off duty officers are permitted to use COPP vehicles for trips into surrounding jurisdictions and may use their vehicles for transportation to and from places of secondary employment provided the COPP vehicles are not used as a part of the secondary employment. The vehicle may be used for transportation of prisoners, if during the course of secondary employment duties an arrest is made.

#### G. Maintenance

- 1. Officers will be responsible for the maintenance of their COPP vehicle and will conduct all maintenance during off duty hours.
  - a. Assigned officers are responsible for the cleanliness of their COPP vehicle and will wash the vehicle regularly and wax the vehicle at least twice yearly.
  - b. Fueling and preventive maintenance and repairs will be conducted on COPP vheicles during assigned officer's off duty time. Preventive maintenance and repairs are to be accomplished by contacting the operations center by telephone for an appointment. This does not preclude the making of emergency repairs at any time.

3. Officers assigned COPP vehicles shall make no alterations to their vehicle that effects the appearance, structure, or the operation of installed police equipment. Factory equipment radios may be installed in police vehicles by authorized personnel.

#### H. Evaluation

Each officer participating in the COPP Program will maintain an accurate and up-to-date vehicle log book which will be supplied by the department. This log book is to be kept in the vehicle and is to be available for inspection at any time.

APPENDIX E

FORMULAS AND FIGURES

The following appendix is intended for reference only. In an attempt to anticipate questions as to how totals were arrived at, many of the formulas used throughout the Presentation of the Community Oriented Police Patrol Program are included herein.

#### FORMULAS

1.	TOTAL MILEAGE (BASED ON TEN MONTHS)	1,297,957
2.	AVERAGE MILEAGE PER VEHICLE	25,959
**	TOTAL COST FOR VEHICLE OPERATIONS (BASED ON TEN MONTHS)	\$ 337,682
3.	COST PER MILE(EXCLUDING DEPRECIATION)	\$.26
4.	COST PER MILE(INCLUDING DEPRECIATION)	\$.35

- 1. ACTUAL VEHICLE MILEAGE FOR MAY 83 THROUGH MAY 84 / BY 12 \* 10=1,297,957 TOTAL VEHICLE MILES FOR TEN MONTHS.
- 2. TOTAL VEHICLE MILES(BASED ON 12 MONTHS) MAY 1983 THROUGH MAY 1984= 1,557,549
  / BY 60 POLICE UNITS= 25,959
- 3. TOTAL COST FOR VEHICLE OPERATIONS(BASED ON TEN MONTHS) / TOTAL VEHICLE
  MILEAGE(BASED ON TEN MONTHS) = \$.26
- 4. COST OF NEW VEHICLE (10,800) SALVAGE VALUE AT AUCTION(800) / BY ESTIMATED VEHICLE LIFE(112,000 MILES) + .26= \$.35
- \*\* TOTAL COST FOR VEHICLE OPERATIONS BASED ON FINANCIAL ACCOUNTING SYSTEM REPORT, JUNE 30, 1984 FOR OPERATING EXPENSES (TEN MONTHS)

#### MILERGE AVERAGES

#### SOUTH PATROL STAFF VEHICLES AND WATCH SUPERVISORS

total mileage 114,689 / 6 Patrol vehicles = 19,115 average miles Pervehicle Per year.

#### SUPPORT UNIT VEHICLES

total mileage 39,516  $\neq$  7 Patrol vehicles = 5,645 average miles Pervehicle Per year.

#### SOUTH PATROL VEHICLES

total mileage 578,864 / 28 Patrol vehicles = 28,943 average miles Pervehicle Per year.

#### NORTH PATROL VEHICLES

total mileage 626,622 / 16 Patrol vehicles = 39,164 average miles Pervehicle Per year.

#### NORTH PATROL SUPERVISOR VEHICLES

total mileage 110,476 / 5 Patrol vehicles = 22,095 average miles Pervehicle Per year.

#### PATROL SUPPORT K-9

total mileage 87,382 / 5 Patrol vehicles = 17,476 average miles Pervehicle Per year.

#### TOTAL VEHICLE MILEAGE AVERAGES

total mileage 1,557,549 / 60 Patrol vehicles = 25,959 average miles Pervehicle Per year.

#### COST PER MILE TOTAL

total mileage 1,297,957(based on ten months) / \$337,682.44 operational costs = \$.26 + 9.2 cents Per mile depreciation = 35.2 cents Per mile.

NOTE: VEHICLES INCLUDED IN AVERAGE MILEAGE FIGURES ARE ALL VEHICLES WITH ACTUAL MILEAGE FIGURES AVAILABLE. VEHICLES PURCHASED DURING APRIL 1984 AND ANY VEHICLE WITH LESS THEM ONE MONTH REPORTED MILEAGE WAS NOT INCLUDED. MILEAGE FIGURES ARE BASED ON VEHICLE MILEAGE CALCULATED FROM

MAY 1983 THROUGH MAY 1984.

#### STARTING MILEAGE 84/85

Total Patrol miles=  $1,205,486 - (22 \text{ take home vehicles} \times 16000 \text{ miles on duty } 352,000 = 853,000 \text{ miles } / 33 \text{ Pool vehicles= } 25,863 \text{ rounded to } 26,000 \text{ miles Per Pool vehicle Per Year.}$ 

#### STARTING MILEAGE 85/86

Total Patrol miles = 1.205,486 + 99.000 for added Personnel = 1.304.486 + 99.000 for added Personnel = 1.304.486 + 99.000 for added Personnel = 1.304.486 + 99.000 for take home vehicles = 480.000 for Pool Patrol vehicle Per year rounded to 28.500.

#### STARTING MILEAGE 86/87

Total Patrol miles =  $1.304.486 - (38 \text{ take home vehicles} \times 16.000 \text{ miles}$  = 608.000) = 696.486 / 28 Pool Patrol vehicles = <math>24.874 miles Per Pool Patrol vehicle rounded to 25.000 miles.

#### STARTING MILEAGE 87/88

Total Patrol miles =  $1.304.486 - (47 \text{ take home vehicles} \times 16.000 \text{ miles}$  = 752.000) = 552.486 / 27 pool patrol vehicles = <math>20.462 miles Per Pool Patrol vehicle rounded to 20.500 miles.

#### STARTING MILEAGE 88/89

Total Patrol miles =  $1.304.486 - (59 \text{ take home vehicles} \times 16.000 \text{ miles}$  = 944.000) = 360.486 / 24 Pool Patrol vehicles = <math>15.020 miles Per Pool Patrol vehicle rounded to 15.000 miles.
