ACKNOWLEDGEMENTS

Although the Estimates and Statistical Analysis

Section is responsible for the semiannual publication

of the Population Projections, others in the

Department of Corrections made significant contributions which are greatly appreciated. Among those

involved in the projections were, in alphabetical

order, the:

- Budget Section
- Data Processing Services Branch
- Institutions Division
- Parole and Community Services Division
- Planning and Construction Division

INTRODUCTION

This document contains the California Department of Corrections' (CDC) projections of the institution, parole, and outpatient populations for fiscal years 1986-87 through 1990-91. The projections are based upon the most current available data and existing law.

Factors Affecting Population Increases

Over the last two years, the population in CDC institutions has increased considerably. On December 31, 1986 the population was 59,484 compared to 43,314 on December 31, 1984, an increase of 37.3 percent. The increase over the December 31, 1985 population of 50,111 is 18.7 percent. a/

The increases in population are directly due to two factors:

- · A continuing increase in new admissions to prison.
- A steady increase in the number of parole violators returning to prison, including substantial increases in the number of parolees being returned to prison pending investigation by parole authorities and/or Board of Prison Terms revocation decision (PENDREV's).

The increase in new admissions is due primarily to the impact of legislative and judicial changes. The increase in parole violator returns results from a combination of factors, including severe crowding in local jails and recent court orders against such crowding, a larger parole population, and a high rate of parole violation.

During recent years the California State Legislature and the Governor have enacted laws which increase penalties for offenders and/or reduce the options of the judicial system. Two of the laws passed during the 1982 legislative session, for example, have contributed and continue to contribute substantially to the prison population: one continued a mandatory prison sentence for felony residential burglary, while the other required a more severe penalty for that offense.

The population numbers include individuals under supervision in community-based facilities as well as those actually in prison, and inmates housed in State hospitals.

The Victims' Bill of Rights (Proposition 8), a 1982 voters' initiative, has also impacted the institution population through both additional admissions and longer sentences. The major impact was experienced in FY 1985-86, and additional admissions are already in the long-term trend.

Comparison of Spring 1987 with Fall 1986 Projections

In summary, the Spring 1987 projection is that after June 1987 the institution population will rise at a higher rate than projected in Fall 1986. This is due primarily to higher admission rates and an increased number of parole violator returns anticipated throughout the projection period.

The Fall 1986 projections covered the five-year period after June 30, 1986, at which time there was a total of 55,238 individuals in the institution population. $\underline{a}/$ In those projections the total population was estimated to be 65,135 by June 30, 1987 and to increase to 94,950 by June 30, 1991. The Spring 1987 projections estimate that the June 30, 1987 population will be 64,515 (620 less than projected in Fall 1986), increasing to 97,710 by June 30, 1991 (2,760 more than projected in Fall 1986).

The parole population supervised in California is anticipated to increase at a slightly slower rate than in the Fall 1986 projections. The Spring 1987 parole population projection of 37,820 for June 30, 1987 is 375 higher than that projected in Fall 1986. By June 30, 1989 the number of parolees and outpatients supervised in California is projected to be 49,440, increasing to 60,805 by June 30, 1991. These projections are 1,395 and 1,895 lower, respectively, than those made in Fall 1986.

The decrease in the civil narcotic addict institution populations since the mid-1970's has reversed due to a steady increase in admissions beginning in early 1983. The total (male and female) addict institution population, which was 1,394 on December 31, 1986, is expected to increase to 2,000 by June 30, 1991. Similarly, the total number of outpatients supervised in California is expected to increase from 1,226 on December 31, 1986 to 2,275 on June 30, 1991.

a/ The population of the institutions consists of felons, civil narcotic addicts, county diagnostic cases, Youth Authority wards, persons from other states, federal prisoners, and county prisoners held for safekeeping. Felons include individuals under supervision in community-based facilities (in contract and non-contract beds) and State hospitals as well as those actually in prison.

A summary comparison of the Spring 1987 projections with those published in Fall 1986 is provided below.

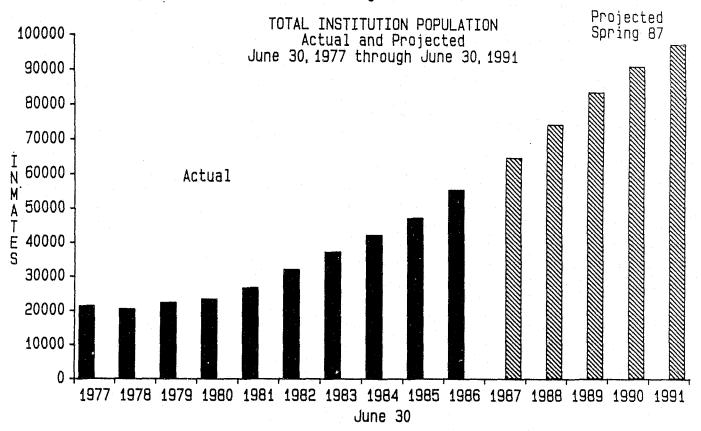

Comparison of Spring 1987 with Fall 1986 Projections June 30, 1987 through June 30, 1991

Year End	Spring 1987	Fall 1986	
(June 30)	Projections	Projections	Difference
Institution			
Population			
1987	64,515	65,135	(620)
1988	74,045	73,010	1,035
1989	83,390	80,555	2,835
1990	91,095	88,140	2,955
1991	97,710	94,950	2,760
Parole & Outpatie	ent		
Population			
(California Super	vised)		
1987	37,820	37,445	375
1000	44,345	43,390	955
1988		70 AA7	(1 205)
1988 1989	49,440	50,835	(1,395)
	49,440 55,750	50,835 56,905	(1,395)

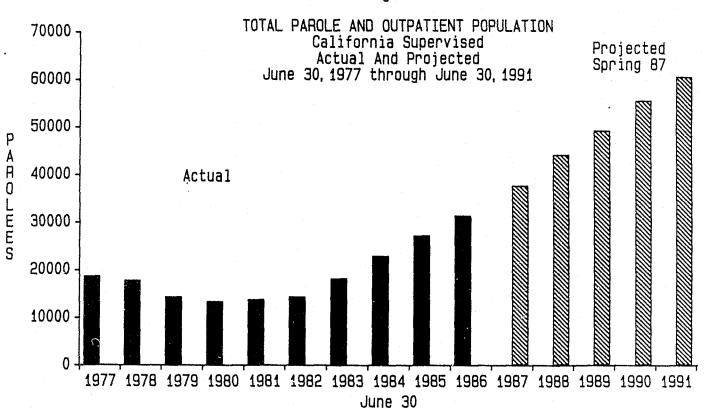

Figures 1 and 2 on page 4 graphically display the Spring 1987 projections for total institution population and total parole and outpatient population. Figure 1 displays the actual and projected institution population, while Figure 2 displays the actual and projected California supervised parole and outpatient population, both for the period June 30, 1977 through June 30, 1991.

The Spring 1987 projections are summarized in Tables 1, 2 and 3 and are presented in greater detail in Tables 4 through 18. Tables 4 and 5 present the quarterly institution population projections, while Tables 6 and 7 detail projections by inmate placement needs. Tables 8 through 11 project the movement

Figure 1

of the institution (including civil narcotic addict) population, Table 12 presents detail on other institution populations, and Tables 13 through 18 present detailed projections of the parole and outpatient populations.

Figure 3

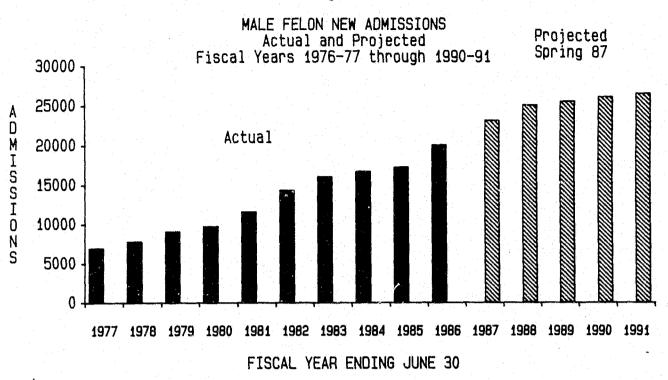

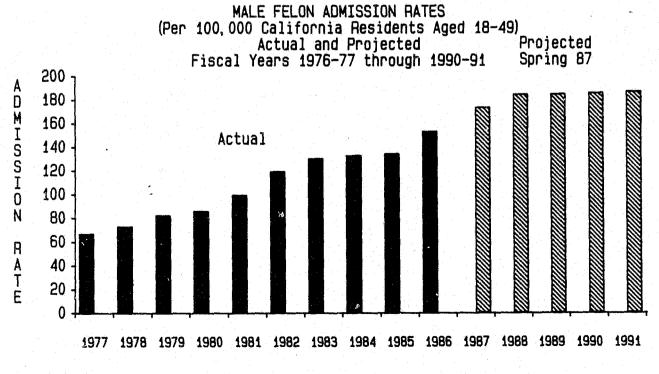

Figure 4

PREMISES

The major factors and assumptions upon which the final projections are based are as follows:

I. Male Felon Admission Rate

The male felon admission rate (inmate admissions to prison from court per 100,000 California residents aged 18-49) is expected to increase throughout the projection period, although the rate of increase is anticipated to slow down in the later years. The actual and projected male felon new admissions to prison for FY 1976-77 through 1990-91 are displayed in Figure 3. Figure 4 displays the actual and projected male felon admission rates for this same period.

Actual admissions during the first six months of FY 1986-87 were 35 higher than those projected in the Fall. Because of the slightly higher baseline from which the admission projection begins and because of additional adjustments due to recent felony filing trends in Los Angeles, the Spring 1987 projected admission rates are somewhat higher than those projected in the Fall. The projected rates gradually increase through FY 1990-91, although the growth increases at a progressively slower rate after FY 1987-88 partially due to the gradual shrinking of the prison-prone population age group (males aged 20-29) in California.

Admissions are projected based on two major factors: (1) long-term trends and (2) the estimated impact of legislation, voter initiatives, court decisions and administrative policy.

The Spring 1987 admission projections for the second half of FY 1986-87 and for FY 1987-88 are based on three multiple regression analyses (one for each age group defined below), using the prior ten years' admissions by month. The three age groups are: (1) males aged 20-29 (the prison-prone group); (2) males aged 18-49 excluding ages 20-29; and (3) males aged 15-17 and over 49. For the third through fifth years of projected admissions, the admission rates for each age group were increased by the lowest percent change in admission rates within each age group during the past ten years. The projected admissions were computed from these rates using the Department of Finance state population estimates, and the results added to produce the total projected admissions.

As in the Fall 1986 projections, recent felony filing data—a leading indicator for admissions to state prison—were analyzed to improve the short-term projection of new admissions. Based on multiple regression

analyses of felony filing data from Los Angeles County (which currently accounts for 42 percent of total statewide male felon admissions), the January through June 1987 admission projection derived from the statewide admission regression was increased. The admission rates for FY 1987-88 through FY 1990-91 were adjusted by the same proportion.

Recent discussions with administrators in Los Angeles, Orange and San Francisco County District Attorney offices about the increasing felony filings which ultimately impact CDC new admissions provided opinions that this increasing trend will continue. The administrators suggest that the major reason for increasing felony filings is the significant increase in the number of drug and drug-related arrests resulting from drug sweeps and the current emphasis on drug control. It was suggested that recent judicial appointments tend to reflect the continuing public and official attitudes toward tough criminal sentencing policies. Also, crime reporting techniques are becoming increasingly automated and complete, giving judges quicker access to defendants' prior criminal histories resulting in more enhancements and stiffer sentences.

Although certain new pieces of legislation which could result in new prison admissions have been chaptered since the Fall 1986 projections, their specific impact cannot be quantified. However, their impact may have been incorporated in the increased admission rates resulting from the above discussion on admission projections. The effects of previous legislation are assumed to be reflected in the long-term trend.

The actual and projected admission rates are listed below. The projected rates for the Spring 1987 projections include the impact of the long-term trend and the estimated impact of statewide felony filings.

Admission Rates

Fiscal Year	Actual Ra	tes
1981-82	119.8	
1982-83	130.7	
1983-84	133.2	
1984-85	134.8	
1985-86	153.5

II. Significant Chaptered Legislation and Initiatives

Legislation discussed in Item A was included in the Fall 1986 projections. New substantive legislation not included in the Fall 1986 projections is discussed in Item B.

- A. Legislation included in prior projections where impact of penalty change begins after June 30, 1986:
 - 1. Chapter 1423, Statutes of 1984 (SB 1899, Watson), an urgency measure, increased the punishment for causing or permitting child abuse. The estimated impact is 50 felons per year serving an additional 6 to 12 months in prison beginning in FY 1986-87.
 - 2. Chapter 191, Statutes of 1985 (AB 912, Leonard), effective January 1, 1986, increased the punishment for kidnapping from 3, 5 or 7 years to 3, 5 or 8 years. An estimated 85 felons per year will serve an additional six months in prison beginning in FY 1993-94 as a result of this legislation.
 - 3. Chapter 915, Statutes of 1985 (SB 610, Royce), effective January 1, 1986, imposed a full, separate and consecutive term for anyone convicted of escape from jail with force or violence. The estimated impact from this bill is ten felons per year serving an additional 18 to 20 months in prison beginning in FY 1990-91.
 - 4. Chapter 1086, Statutes of 1985 (SB 241, Boatwright, et al.), effective January 1, 1986, provided for a two-year enhancement for anyone with a prior conviction of robbery, kidnapping, rape by force, sodomy by force, oral copulation by force or mayhem committed against certain defenseless victims. It also provides for a two-year enhancement for anyone with a prior conviction of rape with a foreign object who is convicted of rape with a foreign object against certain defenseless victims. An estimated 130 felons per year will serve an additional 15 to 24 months in prison beginning in FY 1988-89 as a result of this legislation.
 - 5. Chapter 1398, Statutes of 1985 (AB 2320, Condit), effective January 1, 1986, provided for a three-year enhancement for each prior conviction of specified drug offenses for anyone convicted of certain drug offenses. It also provides for a 3, 5 or 10-year enhancement for anyone convicted of certain drug offenses where the weight of the drugs exceeds specified amounts. The estimated impact from this bill is a minimum of 450 felons per year serving an additional 22 to 54 months in prison beginning in FY 1987-88.

- 6. Chapter 80, Statutes of 1986 (AB 2362, Condit), effective January 1, 1987, provided (a) a 3-year additional term to be imposed for each prior conviction of specified drug offenses, (b) additional penalties for conviction of specific offenses involving methamphetamine, amphetamine or phencyclidine (PCP) and its analogs, where the substances exceed a specific amount, and (c) additional penalties for manufacturing methamphetamine or amphetamine where the weight or volume of the substance exceeds a specific amount. This bill is estimated to affect 100 felons (90 felons serving an average of 33 to 35 additional months and 10 felons serving an average of 18 to 24 additional months) beginning in FY 1988-89.
- 7. Chapter 85, Statutes of 1986 (AB 2049, Katz, et al.), an urgency measure, effective May 6, 1986, prohibited the judge from striking any prior conviction of a "serious felony" for purpose of five-year sentence enhancement when the defendant is being sentenced for a present conviction of a "serious felony." An estimated 105 felons per year (maximum) will serve an additional 31 months in prison beginning in FY 1988-89 as a result of this legislation.
- B. New substantive legislation not included in the Fall 1986 projections:
 - 1. Chapter 249, Statutes of 1986 (AB 606, Davis), an urgency measure, effective July 3, 1986, provides for an additional term of 9 years for any person convicted of kidnapping a person under the age of 14 years for the purpose of committing specified sex acts. The estimated impact from this legislation is 35 felons per year serving an additional 17 to 36 months in prison beginning in FY 1991-92.
 - 2. Chapter 1035, Statutes of 1986 (AB 2823, Hughes), effective January 1, 1987, increases the punishment for any person 18 years of age or older convicted of certain drug offenses involving a minor under 14 years of age from 3, 4 or 5 years to 3, 5 or 7 years. An estimated 5 felons per year will serve an additional 12 to 24 months in prison beginning in FY 1988-89 as a result of this legislation.
 - 3. Chapter 1106, Statutes of 1986 (AB 2558, Duffy), effective January 1, 1987, redefines one type of vehicular manslaughter as "gross vehicular manslaughter while intoxicated" and increases the punishment from 4, 6 or 8 years to 4, 6 or 10 years. The estimated impact from this legislation is 25 felons per year serving an additional 12 months in prison beginning in FY 1991-92.

- 4. Chapter 1424, Statutes of 1986 (AB 2889, Costa), effective January 1, 1987, increases the punishment for any person convicted of mayhem from 2, 4 or 6 years to 2, 4 or 8 years. An estimated 5 felons per year will serve an additional 12 months in prison beginning in FY 1991-92 as a result of this legislation.
- January 1, 1987, provides that when 2 or more specified enhancements may be imposed for committing attempted murder, or specified sex crimes (or attempts of these crimes), the court may impose both an enhancement for weapons and an enhancement for great bodily injury. The estimated impact from this legislation is a minimum of 10 felons per year serving an additional 11 months in prison beginning in FY 1993-94.
- 6. Chapter 1431, Statutes of 1986 (AB 2295, Killea), effective January 1, 1987, requires a court, in determining whether specified sex crimes against a single victim occurred on separate occasions, to consider whether the defendant had opportunity to reflect upon his or her actions and nevertheless resumed sexual activity. If the defendant had opportunity to reflect, he/she is subject to receiving full, separate, and consecutive terms, as specified. An estimated 50 felons per year will serve an additional 70 months in prison beginning in FY 1991-92 as a result of this legislation.
- 7. Chapter 1433, Statutes of 1986 (AB 3445, Hughes), effective January 1, 1987, increases the punishment from 2, 3 or 4 years to 3, 5 or 7 years for discharging a firearm at an inhabited dwelling house, occupied building or motor vehicle, or inhabited housecar or camper. An estimated 45 felons per year will serve an additional 6 to 18 months in prison beginning in FY 1988-89 as a result of this legislation.
- 8. Chapter 519, Statutes of 1986 (SB 1668, Presley), effective January 1, 1987, increases the punishment for attempted willful, deliberate, and premeditated murder from 5, 7 or 9 years to life imprisonment with possibility of parole. The estimated impact from this legislation is a minimum of 65 felons per year serving an additional 90 to 114 months in prison beginning in FY 1990-91.
- 9. Chapter 1044, Statutes of 1986 (SB 1960, Seymour), effective January 1, 1987, increases the punishment for possession for sale or for purchasing for purposes of sale certain forms of cocaine, adds 2 new drugs to the drug schedules subject to corresponding penalties, increases the middle and upper base term punishment for specified drug offenses involving minors, prohibits probation for specified acts involving analogs of, or

precursors to, phencyclidine, prohibits probation for persons who violate specified controlled substance laws involving a minor, as defined, and prohibits probation for specified acts involving certain forms of cocaine. An estimated 100 felons per year will serve an additional 6 months in prison beginning in FY 1988-89 as a result of this legislation.

- 10. Chapter 1439, Statutes of 1986 (SB 2276, Campbell), effective January 1, 1987, increases the punishment for arson that causes an inhabited structure or inhabited property to burn from 3, 5 or 7 years to 3, 5 or 8 years. An estimated 10 felons per year will serve an additional 6 months in prison beginning in FY 1991-92 as a result of this legislation.
- 11. Chapter 1446, Statutes of 1986 (SB 1246, Presley), effective January 1, 1987, increases the maximum number of days of credit that may be lost for specified acts of misconduct from 180 days to 360 days, provides that up to 180 days of lost credit shall not be restored for a forfeiture of credits resulting from commission of any of these specified acts of misconduct, and up to 90 days of lost credit shall not be restored for conspiring or attempting to commit any of these specified acts. The estimated impact from this legislation is 325 felons per year serving an additional 1 to 4 months in prison beginning in FY 1989-90.

III. The Inmate Work/Training Incentive Program (IWTIP)

This program allows eligible inmates to earn up to a six month reduction per year in sentence length. As in the Fall 1986 projections, it is estimated that as of January 1, 1987, 80 percent of the eligible inmate population had full-time assignments and thus were earning one-half sentence reduction. The IWTIP applies to felons in prison on January 1, 1983 who chose to opt into the IWTIP and to all felons who committed their offenses on or after January 1, 1983.

IV. <u>California Youth Authority Supervision of "M" Cases on Work Furlough</u> and Parole

Section 1731.5(c) of the Welfare and Institutions Code authorizes the court to sentence defendants under the age of 21 to the CDC, but specifies that they be housed in California Youth Authority (CYA) institutions where they are designated "M" cases. After completing their sentences, these "M" cases are currently released to work furlough and parole under CDC supervision. Under a proposed agreement between CDC and CYA, CYA will assume supervision of all new "M" cases transferred to work furlough and parole beginning July 1, 1987. The Spring 1987 projections assume that the proposed procedure will go into effect July 1, 1987 and that CDC will continue to be responsible for housing parole violators who were former "M" cases. The Spring 1987 projections also

incorporate the "M" case intake transferred from CYA to CDC institutions as program failures (i.e., refusing to participate in an educational, work or vocational training program) or for disciplinary problems. Based on recent experience with the "M" cases, it is estimated that approximately 700 CYA "M" cases will be released to parole or work furlough per year and 300 CYA "M" cases per year will be transferred to CDC as program failures or disciplinary problems.

V. Mean Sentences and Preconfinement Credits

As shown below, the mean sentence length has decreased for both male and female felons who received determinate sentences of 15 years or less. (The analysis was restricted to those who received determinate sentences of 15 years or less in order to provide information relevant to the 5-year projection period.) Mean preconfinement credits have also decreased slightly for both male and female felons. The net result should be a slight decrease in time served in prison for both male and female felons.

MEAN SENTENCES AND PRECONFINEMENT CREDITS (In Months)

Felons Admitted With Determinate Sentences of Fifteen Years or Less

	<u>Male F</u>	elons	Female Felons			
	January 1986- December 1986	June 1985- May 1986	January 1986- December 1986	June 1985- May 1986		
Mean Sentence	40.31	41.23	30.64	31.55		
Mean Preconfine- ment Credits	7.06	7.20	6.42	6.58		
Mean Sentence Min Mean Preconfine ment Credits		34.03	24.22	24.97		

VI. Placement Need Projections

Projections by inmate placement need are included in this publication (Tables 6 and 7). Table 6 displays placement needs for male felons only while Table 7 presents placement needs for the male institution population, including civil narcotic addicts and others. The projections are based on the proposed Option 1 in the departmental Inmate Classification System Study. It is assumed that implementation of the revised system will begin October 1, 1987 and be completed by September 30, 1988.

As in the Fall 1986 projections, the Spring 1987 projections assume that the male felon reception center population will increase proportionately with the increase in male felon intake. In addition, the reception center projections include the increased need to process and house parole violators. Separate medical/psychiatric and special housing projections are included, assuming a constant proportion of the number of inmates of each classification level in each of these categories over the projection period.

VII. Parole Violators

The number of parole violators returning to prison has continued to increase in the past six months—from 10,372 for January—June 1986 to 11,960 for July-December 1986, an increase of 15 percent. A 27 percent increase occurred in FY 1985-86—from 8,199 for July-December 1985 to 10,372 for January—June 1986.

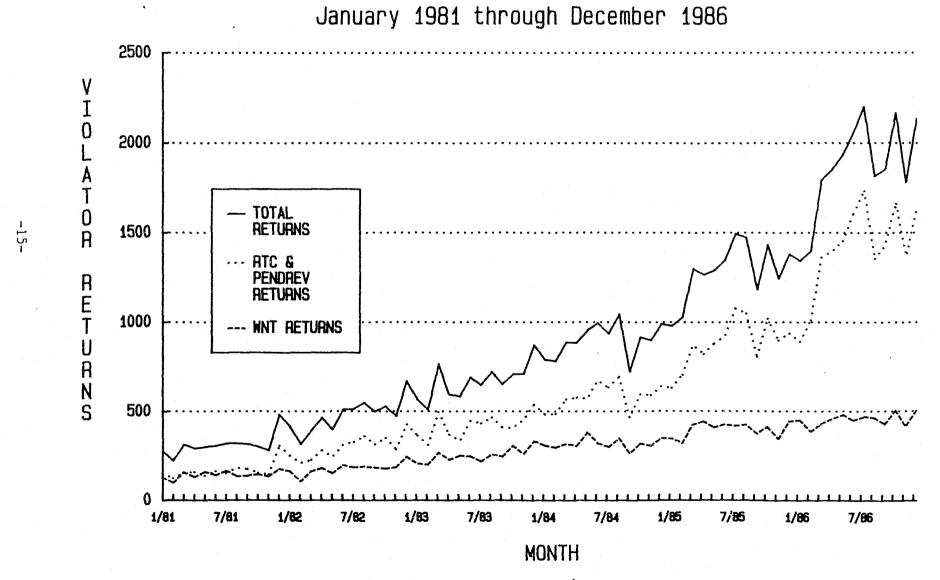

Figure 5 displays the increase in the number of male felon parole violators since January 1981. Male felon parolees returning to prison without new commitments have increased at a greater rate than parole violator returns with new commitments (WNT's). This is partially due to the increasing number of parolees being returned to prison pending investigation by parole authorities and/or Board of Prison Terms (BPT) revocation decision (PENDREV's), as well as an increase in the number of those returned to custody after revocation of their parole (RTC's). During July-December 1986, RTC's and PENDREV's were 77 percent of all PV returns, compared to 73 and 67 percent for FY 1985-86 and FY 1984-85, respectively. The continued growth in parole violators in the past six months is due to a variety of factors, each of which is discussed below along with the assumptions for the Spring 1987 projections.

A continued growth in the number of parolees held pursuant to arrest by local enforcement or the Department's Parole and Community Services Division (P&CSD) for parole revocation.

As a result of the growth in parole holds (OHO's) and BPT referrals, the <u>number</u> and <u>rate</u> of parole revocations by the BPT have risen substantially, even though the <u>proportion</u> of cases actually revoked by the Board has not changed significantly in the recent past. The Spring 1987 projections assume that the revocation proportion will remain stable but the rising trends in P&CSD parole holds in the past five years will continue through CY 1987 and then flatten out for the remainder of the projection period. The rate of male felon parole violator returns (RTC's, PENDREV's and WNT's) is currently approximately 88 per 100 parolee ADP. The rate of returns is expected to continue to increase for the next 12 months and then flatten out for the remainder of the projection period.

Figure 5

MALE FELON PAROLE VIOLATOR RETURNS

2. Continued efforts by the BPT and the P&CSD to expedite the processing of parole violators returned to institutions after revocation by the BPT (non-PENDREV's).

During July through December 1986, the average processing time for parole violators was about 65 days. The goal of BPT and P&CSD for processing parole violators continues to be a 45-day maximum. It is expected that the processing time will decrease from the current 65-day average due to BPT's hiring of ten new hearing representatives, BPT conducting special screenings on a statewide basis, and the Solano County Superior Court's ruling against delays in holding parole revocation hearings.

In late February 1987, BPT began screening all cases for hearing waiver eligibility. Issuing hearing waivers eliminates the need for a revocation hearing for parolees who accept the revocation time specified in the waiver, thus reducing processing time. This statewide screening procedure is expected to result in an increase of RTC's returning to prison in late February and March 1987 and a reduction in the average processing time. Processing time is also expected to be reduced due to additional procedures (e.g., shortened reporting time frames, use of handwritten rather than typed reports) implemented by the P&CSD as well as the BPT in response to the Court's ruling.

No substantial backlog of parole violators waiting to be processed has occurred since the latter part of CY 1985. The accumulation of a large backlog of parole violators during the 1985 Christmas and New Year season did not occur in 1986. The Spring 1987 projections assume that no substantial hearing backlog will accumulate.

3. Restricted use of county jail beds due to overcrowding and related court injunctions.

San Diego is now the only large county which allows unrestricted booking of parole violators, although transportation of parole violators to state prison is often accelerated to relieve local overcrowding. Many counties, such as Orange County, no longer accept OHO's for temporary housing in their jails because of jail overcrowding and/or court injunctions; others, such as San Francisco, are now holding OHO's in their jails only for a very limited time. The number of parolees detained in the Los Angeles County Jail on parole violation holds has been reduced substantially (to about 500) by agreement between the Department of Corrections and Los Angeles County, resulting in a significant loss of jail beds for housing parolees in all stages of return. As a result of the increasing loss of jail beds for housing OHO's, more and more parole violators are being held in prison pending parole investigation and BPT revocation hearings. Previously, these cases would have been held in county jails.

Recent surveys of felon parolees in custody in county jails indicate that about 900 beds statewide have been lost to the Department since February 27, 1985. Table A shows the current bed restrictions and anticipated changes in major counties. The Spring 1987 projections assume that approximately 200 additional jail beds will be lost by June 30, 1987 through restrictions throughout the state. Furthermore, in view of the recent substantial increase in the number of PENDREV's, the Spring 1987 projections assume that the proportion of male felon parole violator returns to prison without new commitments (RTC's and PENDREV's) relative to the total number of all parole violator returns will continue to increase throughout the projection period.

4. Increase in parole violators returning to prison due to severely overcrowded courts, tougher judicial attitudes and the increasing number of drug offenders.

Information obtained from P&CSD regional administrators confirm that the number of parole violators returning to prison will continue to increase due to the severely overcrowded courts, the increasingly tougher judicial attitudes on crimes, the increasing number of drug offenders in prison as well as on parole, and the ever-increasing parole population itself.

During the last two years, judges and prosecuting and defense attorneys have increasingly conferred with P&CSD regional administrators when a parolee is arrested to find out the revocation time a parolee will likely receive. If the probable revocation time is acceptable to the court, the courts are dismissing local charges and having P&CSD process the case. This procedure helps the county financially and relieves court overcrowding.

Regional administrators also suggest that the increasing number of drug offenders ultimately results in a significant increase in parole violations. Drug offenders tend to violate parole at a higher rate due to the habituating nature of the offense. Better technology and the increased reliability of drug testing also make it easier to detect violation.

Table A

Current & Anticipated Jail Bed Availability by Major County

Type of CDC Parolee Housing Restrictions

County	Current	Effective Date	Comments
Kings	No restrictions		All four of these counties
San Diego	No restrictions		are experiencing severe
San Luis Obispo	No restrictions		shortages of bed space.
