The Assistant Attorney General, Office of Justice Programs, coordinates the activities of the following program Offices and Bureaus: National Institute of Justice, Bureau of Justice Statistics, Bureau of Justice Assistance, Office of Juvenile Justice and Delinquency Prevention, and Office for Victims of Crime.

U.S. Department of Justice  
Office of Justice Programs  
*Bureau of Justice Assistance*

Office of the Director

*Washington, D.C. 20531*

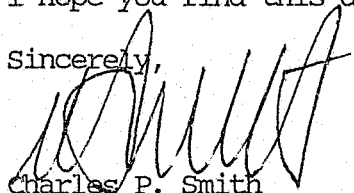

Recent years have been marked by a widespread and growing interest in automation. Criminal Justice agencies in general, and prosecutors in particular, have turned to operational information systems to assess, prioritize and manage growing caseloads. The Bureau of Justice Assistance (BJA) has responded to this interest through grant funding under the Justice Assistance Act, through support of the joint development by SEARCH Group, Inc. and prosecutor-advisors of the "D.A.'s Assistant" management information system package, and through the continued support of training and technical assistance. This directory is part of that assistance effort.

The 1988 Prosecution Management Support Systems Directory contains descriptions of automated prosecutor management support systems in use throughout the United States. The directory was designed to serve as a practical reference for prosecutorial offices now in the process of designing, developing, and implementing their own automated management support systems. The information contained herein is not available from any other single source. By sharing information from prosecutors who have developed or selected an automated system, we hope to provide prosecutors facing these decisions with the tools to make better choices.

Encouraging prosecutors to share their knowledge of and experience with automated support systems, reflects BJA's continuing commitment to improved information and workload management in prosecutors' offices and to the concrete application of proven and promising technology.

I hope you find this directory useful.

Sincerely,

  
Charles P. Smith  
Director

## ACKNOWLEDGEMENTS

SEARCH is pleased to present the 1988 *Directory of Prosecution Management Support Systems* to the criminal justice community, and to prosecutors in particular. This *Directory* was made possible through the voluntary participation of prosecutors who provided information on automated information systems in their jurisdictions. SEARCH sincerely thanks these practitioners for their efforts. We are grateful for the support and cooperation of the National Association of Prosecutor Coordinators and the National Association of District Attorneys. Special thanks to the Bureau of Justice Assistance for continuing to provide the impetus and support for information management technology for criminal justice.

## **Introduction**

## Introduction

### Purpose

The goal of the *Directory of Prosecution Management Support Systems* is to assist prosecutors and their data processing support personnel in developing, enhancing, evaluating or acquiring automated prosecution support systems. This *Directory* is also intended to foster communication among developers and users and to facilitate the transfer and adaptation of existing systems, thus reducing duplication of effort by prosecutorial agencies.

SEARCH Group, Inc., with the support of the Bureau of Justice Assistance, compiled and published this *Directory of Prosecution Management Support Systems*. To collect the information contained herein, SEARCH conducted a survey of prosecutorial agencies across the nation. The *Directory* reflects up-to-date information on 140 operational prosecution management systems.

### Organization

The *Directory of Prosecution Management Support Systems* contains introductory remarks, the automated prosecution systems located through the survey, indices and appendices. Part One, Introduction, outlines the purpose of the *Directory* and a brief description of the information contained in the systems, indices and appendices. Part Two, the automated prosecution systems, displays summary information about the systems. Part Three contains four extensive indices which enable the reader to locate systems quickly, and two appendices.

### System Records

Information about each system is contained in a record. Each record gives a brief overview of the system, including the prosecutorial agency using the system and the name of the person to contact for more information. Basic hardware and software characteristics, such as the type of computer and operating system, are indicated. The functions the system can perform, such as restitution, are listed, and a narrative summary gives pertinent information not included in other parts of the record.

To illustrate and explain the parts of each record in more detail, the first record in the *Directory*, describing the Montgomery County (Alabama) District Attorney Information System, is presented in the following discussion.

|          |  |                     |
|----------|--|---------------------|
|          |  | Alabama, Montgomery |
| Agency:  | Montgomery County District Attorney<br>142 Washington Avenue, P.O. Box 1667<br>Montgomery, AL 36192-2501 |                     |
|          | Jurisdiction:  | General Trial       |
|          | Case Types:  | Felonies to Trial   |
|          | Annual Cases:  | 3,000               |
| Contact: | James H. Evans,<br>District Attorney   | (205) 832-2550      |

**Figure 1: Agency Identification Information**

### *Identifying the Agency*

The records contained in Part Two appear in alphabetical order by state and city. The first part of the record identifies the agency in which the prosecution system is operational (Figure 1). The agency name, street address, city, state and zip code are displayed. Following this information, the agency's legal jurisdiction, the types of cases processed and the total number of cases processed annually are indicated. The name, phone number and title of the person to contact at the agency for more information about the system are also displayed.

|         |   |             |
|---------|---|-------------|
| System: | Montgomery County District Attorney Info System<br>MCDAIS |             |
|         | Manufacturer:   | IBM         |
|         | Model:  | System 36   |
|         | Computer Type:  | Mini        |
|         | Operating System:   | SSP 5.1     |
|         | Language:   | BASIC/COBOL |
|         | Documentation:  | Partial     |
|         | System Status:  | Operational |

**Figure 2: System Identification Information**

### *Identifying the System*

The next block of text displays information about the automated prosecution support system (Figure 2). The full name of the system is given, along with the abbreviated name or acronym that may also identify the system. The hardware on which the system runs is indicated by the manufacturer, model and type of the computer. The name of the operating system and language used to program the system describe the software. The availability of documentation and the status of the system, for example, whether the system is operational or still in the testing, design or planning phases, is also indicated.

| Functions                      |                          |
|--------------------------------|--------------------------|
| Alphabetic Index               | Assignment-Attorneys     |
| Calendaring/Scheduling         | Case Disposition Reports |
| Communications-On Line Inquiry | Computer Instruction     |
| Crime Trend Analysis           | Criminal History         |
| Jury Management                | Parole Control           |
| Prosecution Management         | Research/Statistics      |
| Restitution                    | White Collar Crime       |
| Witness Control                | Word Processing          |

**Figure 3: Functions Performed by the System**

### ***System Functions***

After identifying the operating agency and the basic system information, the *Directory* record lists the functions that are performed by the system (Figure 3). See Appendix A for a complete list of possible system functions.

#### **System Summary:**

The Montgomery County District Attorney Information System (MCDAIS) is a menu-driven system that integrates vendor software, application programs, and word processing in support of the following prosecutor related functional areas: 1) District Attorney Data Inquiry (DAIN); 2) Jury Venire--Management and Reports (JVMR); 3) Grand Jury Management and Reports (GJMR); 4) Records Management and Arraignment Processing (RMAP); 5) Victim Services/Restitution Management (VSRM); and 6) Worthless Check Unit Management (WCUM).

**Figure 4: Narrative Summary of the System**

### ***Narrative Summary***

This section of the system record gives a brief narrative description of the system, describing its features and functions. The agency may also include pertinent information and general commentary about the system that was not covered in other sections of the record.

## Indices and Appendices

Four indices have been compiled, enabling the reader to locate systems quickly according to certain criteria, such as AT&T hardware or MS-DOS operating systems.

Appendix A contains a list of system functions and Appendix B supplies an Update Notification Card.

- State Index

The State Index lists the states and the names of the automated prosecution management support systems located in each state.

- Function Index

This index contains the functions in Appendix A and displays the names of the systems that perform each function, such as jury management or restitution.

- Operating System Index

The Operating System Index lists the operating systems, for example, MS-DOS, and the prosecution systems that run under each operating system.

- Hardware Index

This index lists computer manufacturer and model, for example, Hewlett-Packard 3000, and the names of the systems that operate on each computer.

- Appendix A: System Functions

This Appendix is a list of system functions which agencies used in completing the survey to describe their system.

- Appendix B: Update Notification Card

This Appendix provides an Update Notification Card which an agency can use to update a system record or add a new system to the *Directory*.

## Limitations

This *Directory* represents the responses returned to SEARCH from its nationwide survey of prosecutorial offices. The list of systems is not inclusive of all prosecution management support systems in the United States.

The information in the records is printed as it was reported and was not verified by project staff. Before taking action based upon information contained in a record, the reader should contact the agency operating the system in which the reader is interested to verify information about the system.

## **Errors/Omissions Notification**

The information in the *Directory of Prosecution Management Support Systems* is part of a large database of automated criminal justice systems maintained by SEARCH Group, Inc. We would appreciate your assistance in keeping the prosecutorial information current. To update records or add information to the database, complete and return the Update Notification Card located in Appendix B.

#### System Summary:

LEJIS is primarily an on-line system serving the Maricopa County Sheriff's Office, the Maricopa County Attorney's Office, the criminal section of the Maricopa County Court Administrator's Office, and the Maricopa County Adult Probation Department. There are presently 185 terminals and 82 printers connected directly to the system, with an additional 327 terminals located throughout Arizona which have inquiry capability to the system via a state switch located at the Arizona Department of Public Safety. LEJIS is old, having been developed in 1971 and is presently being considered for redesign/rewrite, using a state-of-the-art technology.

### System Summary:

This Felony Case Tracking system is a replacement for a heavily modified version of INSLAW PROMIS. The system uses APR's database with the application written in "IDEAL." The system is designed primarily for the day-to-day operations of the prosecutor. The system is of modular design and easily modified. It was designed to maximize the "useful" information available while minimizing data entry.

#### System Summary:

D.A.'s Assistant is a public domain system and is written in DataFlex. The system maintains case-related information from point of referral to a prosecutor's office through expiration of sentence. It has 10 main data files: 1) Case Header; 2) Defendants; 3) Charges; 4) Sentences; 5) Related Persons; 6) Court Events; 7) Actions; 8) Personal Information; 9) Aliases; and 10) Related Persons. The system utilizes 23 translation tables for coded data elements including: offense code, attorney, judge, bond agent, case status, event type and sentence type. It also includes an ad hoc report generator.

| Restitution              | Word Processing         |

---

### System Summary:

The Restitution Program helps the prosecutor manage court-ordered restitutions. It will automatically disburse money received to the victims, and print receipts, checks to the victims, receipt journals, disbursement journals, victim payout schedules, monthly collection ledgers, and reports of defendants who are late with their payments.

The Automated Hot Check System (also developed in DataFlex) manages the collection and disbursement of hot check funds. It automatically prints a warning letter to the defendant advising him to pay the amount of the bad check, plus merchant and prosecutor fees, within 10 days. If the defendant does not pay within 10 days, the system will generate an arrest warrant. If the defendant does pay, the system prints a receipt. The system aggregates disbursements made to the merchants and to the prosecutor. Reports include subsidiary restitution ledgers, receipts, journals, check registers, and a monthly recap ledger.

#### System Summary:

This Honeywell-Bull, Inc. CRIMES is currently in operation in three of California's large counties (Los Angeles, San Diego and San Bernardino). Solano County and two other smaller counties are now coming on-line. The system promises to do all the case tracking and case management (statistics generation) as well as document processing (complaints, information). There is an extensive uniform crime charging database, a brief bank, jury instructions and a juvenile justice component.

#### System Summary:

The District Attorney's Legal Information System (DALITE) was designed at Office of the District Attorney of Alameda County. It is a system for managing information on felony prosecutions. The computer system supports the people who evaluate and file charges, calendar and prosecute felonies, take charge of property and look after victims and witnesses, and who are called upon to manage our offices and advise on and evaluate the whole prosecution process.

---

#### System Summary:

The District Attorney Computerized Information System (DACIS) provides the San Mateo County District Attorney's Office with the following: name index of defendants; case tracking in superior court only from beginning to disposition (currently no tracking in municipal or juvenile court); generates statistical reports on a number of misdemeanor and felony filings; drunk driving and petty theft; generates subpoenas; and has a juror index.

This system is integrated with the Sheriff's Office, Jury Commissioner and Clerk's Office. Although there is no case tracking or integration with the municipal courts (they are not automated at this time), there is access to CLETS for CII, DMV, etc., requests; Sheriff's booking records, county rap sheet; Clerk's Office calendars, courtrooms (superior court only); and Jury instructions.

A major feature of DACIS is the indexing of municipal and superior court cases filed, rejected and closed by the District Attorney's Office. In superior court, there is also the ability to track each appearance by defendant. Such tracking is not done in the municipal branches.

#### System Summary:

The Automated Case Information System (ACIS) is the California Attorney General's automated legal case docketing system. It contains information (case title, attorney, court number, client, dates, etc.) on cases that involve the Attorney General's office. There are four Legal Division offices within the Department of Justice that perform the "docketing" functions for the Attorney General. ACIS uses TIP/1100, DMS/1100, and DPS/1100 to access the data base and send responses to the four field offices. The user, depending on password level, may create, inquire, or modify records. Additionally, ad-hoc reports may be requested on-line. Approximately 45 reports are produced routinely.

---

#### System Summary:

The Automated Brief Bank System (ABBS) was designed to automate the manual process performed by state attorneys. ABBS aids the attorneys in their research of current cases by locating cases in the database that pertain to the same subject. They are able to access this data through terminals located in their offices in Sacramento, Los Angeles, San Diego, and San Francisco.

The ABBS System features an Argument/Category Index for browsing or locating arguments, a Death Penalty Digest which lists Death Penalty Cases and a synopsis of the case, and the ability to get hard copies of all arguments and Death Penalty Synopses.

#### System Summary:

The Felony Case Index System is an on-line interactive system that allows for entry of felony criminal cases upon initial receipt. It allows on-line updating, including the decision to charge or reject, and updating of court event and case dispositions. The system tracks a case by its key number which is the same for all defendants on the same case and unique for each defendant by inclusion of defendant number. Historical data is maintained on-line. The system is fully operational.

#### System Summary:

The San Francisco Court Management System was established on-line in 1974 and serves the District Attorney, Public Defender, Municipal & Superior Courts, County Clerk, Adult Probation, Sheriff and Police in the City and County of San Francisco. This is a large on-line system serving 275 terminals and processing over 1,000,000 transactions per month. The system tracks the offender from arrest to disposition, produces court calendars, on-line case status, and management reports. It has criminal histories stored permanently on-line. It also has CAD, ALI, and communications interface to CLETS, NCIC and the Bay Area Wants-Warrants Network.

#### System Summary:

The PROFILE system is a case management and tracking system developed for the District Attorney's Office in 1984-85. The day-to-day operational needs of the District Attorney's Office are supported by the system as they relate to the intake and filing of cases, tracking case progress through court events, disposition and sentencing. The PROFILE system also maintains defendant and case history information and witness subpoena data.

#### System Summary:

The Weld County District Attorney's Automated System is part of an integrated criminal justice network. The system is designed to store essential case information (i.e., defendant, witness, case status, charges, offenses, events and sentencing) and track case activity from beginning to end. The automated system accepts data from all areas of the District Attorney's Office (District Court, County Court, DUI's, Juvenile, Juvenile Diversion, Consumer Fraud, Bad Checks, Victim/Witness) and provides access to the case information through various methods. These access methods include: defendant name, victim name, witness name, police report number, case number, docket number, reporting officer, involved attorneys and judge. The system also runs on an IBM Token Ring PC network to facilitate accessing the application system and to provide word processing.

#### System Summary:

The Delaware Department of Justice has installed a Banyan Network with IBM Token Ring. The network provides print sharing and print spooling; file transfer and file sharing; electronic mail; calendaring for the Wilmington, Dover, Georgetown and AG Witness Room. The network also allows communications to host computers and other computer systems throughout the state; i.e., criminal history information, court processing, LEXIS and communications to the Division of Accounting.

There are approximately 90 users on the Banyan Network. The Department is focusing attention on the development of applications during this fiscal year. Currently operating are an Automated Payroll and Personnel System, Opinion Bank, an Inventory System, Medicaid Fraud Case Track, Special Investigation Case Track, Automated Delaware Code and Opinion Retrieval, and Key Word Search. An application has been developed on the mainframe which provides the downloading of information to a PC for automated disbursement of witness victim letters.

#### System Summary:

PRISMS was partially developed through a State Granted Project. The PRISMS Project was to develop a uniform system of information gathering and an "in-house" method of case tracking and administrative management for workload development for all State Attorney's Offices in Florida.

The main functions of this system are case management, critical forms issuance and report generation. PRISMS operates in an on-line update mode. The PRISMS system currently consists of two main databases: 1) Felony/Misdemeanor, and 2) Juvenile.

#### System Summary:

"The Saint" is a Case Management Information System based on a fourth-generation database system (LINC) featuring on-line inquiries by searching on defendant, witness, victim, attorney, judge and any agency file number. The inquiries give access to court dockets, calendars, subpoena and warrant status; subpoena history, case and charge records; and on-line report generation. Batch reports include attorney monthly reports, state-required workload reports, tickler reports for approaching deadlines and comprehensive case status sheets.

#### System Summary:

The host STATUTES system in Pensacola, Florida, supports data communications from over 60 terminals which reside in one local and five remote offices. Seven printers are also on-line to produce subpoenas when requested via the terminals. The main function of the host is to accept all new case data which is updated until final disposition, and to produce reports and statistical analyses of that data. The system tracks the prosecutorial status of the case from time of arrest until disposition, as it pertains to the Office of the State Attorney.

#### System Summary:

The Clayton County Criminal Justice System is a broad-based system designed to assist the various criminal justice agencies within the county with recordkeeping and case management. It consists not only of a centralized criminal history module accessible to all users, but also a wide variety of user-specific modules which are designed to collect and maintain the data needed by the agencies. This information includes police case data, sheriff, jail and warrant activity, and court calendars and subpoenas. Case disposition and probation data are also maintained.

#### System Summary:

The Prosecutor Management System (PMS) runs on a WANG VS-65 minicomputer located in Hilo. This program was written using the Speed II software by TOM (Total Office Management). The system tracks defendants/charges and also collects data on events, notes, victims/witnesses, and investigators. A report package is part of the Speed II, and there are standard reports which can be run in the background. The system is operational. The program was written as a demonstration project to show that information could be shared among various criminal justice agencies.

#### System Summary:

The FACTS System was developed on a Wang VS-65 using the Speed II software by TOM (Total Office Management). The main screen is a defendant case screen which contains information relating to the case. Attached to the defendant case are screens covering charges, events, victims and notes. In addition, there are modules related to investigator functions and victim services. There are plans to develop a defendant module including the defendants' characteristics, and FBI and State ID numbers. Standard reports were developed using Speed II with the capability for running the report in the background.

---

#### System Summary:

PROMIS is a case tracking system used to monitor felony cases only. The system was installed in 1982. Initial development began in 1971 with LEAA funding. The system is difficult to generate and manage. The strongest feature is a batch ad hoc report generator. Most operational statistics still need to be compiled manually.

#### System Summary:

The Rapid Automated Prosecution System is an automated menu-driven microcomputer data processing system designed and developed by the Illinois Criminal Justice Information Authority (ICJIA). It was designed to reflect the needs of prosecutors' office functions. The system provides information about defendant's charges; produces letters of notification for cases; produces call sheets and docket information; produces reports to be used by management; provides free-form word processing and provides information about victims and witnesses in cases.

#### System Summary:

The Prosecutor's Information Management System is a system originally designed to be coordinated with caseload management for the general trial court and the prosecutor's office in Scott County. It has, for the most part, managed to meet the management needs of both groups within that system since 1978. However, due to the recent assumption of state control over the local courts and all of their personnel and finances, the system will, within the next two years, be replaced by either a new coordinated system or by a judicial system which will require the redevelopment of a prosecutor's system.

#### System Summary:

This Prosecution Management Support System runs on an IBM PC-XT, uses dBase III software, and is designed for a small prosecutor's office with one or two attorneys handling the caseload. The majority of the system is driven by information provided about each case and defendant. From that information, the case, defense attorneys, statistics regarding crime trends, bond information, and case age can be tracked. One important aspect of the system is information provided regarding OMVUI cases. A detailed report provides statistics about geographical location and time of arrests, characteristics of the defendants and arresting officers. This provides support for vigorous prosecution and assists law enforcement officials. This system also has a docket program which assists in organizing court days. Future plans for the system include tracking criminal histories and witness notification.

#### System Summary:

The District Attorney Record Keeping System consists of Tandy 3000 HD in a multi-user environment with four users and the main console. It contains a criminal program designed to generate reports of individuals, trials, dockets, statistics, type of case, arrest dates, agencies, warrants, etc.; a worthless check program; a juvenile program, a juvenile traffic program and word processing. There are telecommunications capabilities which enable communications with other district attorney offices, state offices or any other persons who might have a compatible system.

#### System Summary:

The Baltimore County State's Attorney's Office uses PROMIS to track trial dates, sentences, related cases and information of that nature. Most data is entered through the courts, but the State's Attorney's Office enters names and addresses of state's witnesses. Also received are regular case filing and handling reports produced in batch mode. JAILTRAC, which keeps data on people who have been arrested, is used on a limited basis.

#### System Summary:

Suffolk County PROMIS is designed to assist in accomplishing the organizational goals of the District Attorney's Office: county-wide prosecution of criminal cases. Case prosecution in an automated environment eliminates the need to maintain redundant files and improves the accessibility of often-used information. By reducing the amount of time required to locate information, and by integrating and showing comparisons between previously disjointed pieces of information, PROMIS enables the office to improve the efficiency of its services.

#### System Summary:

This version of PROMIS maintains records of active cases while producing documents such as subpoenas, calendars, warrant forms, etc. It functions as an information system with an on-line inquiry function and it maintains statistics. A database management system called "TEAMUP" is being used to develop a program for the victim-witness unit. It will produce correspondence as well as serve as information storage for query and statistics purposes.

#### System Summary:

JURIS is the only one of the three separate systems in the law and the courts section of Ingham County that has been developed in-house by data processing staff. The JURIS system builds the database of prospective jurors from a file from the Secretary of State's Office, randomly selects jurors, and tracks the progress of selected jurors through the system. The system monitors post office returns, postponements, excusals, and compliance. Additionally, the system prints summonses, excusal and show-cause letters, and re-issues summonses for postponements.

#### System Summary:

The primary function of this system from the Prosecutor's view is to print warrants and subpoenas and to track dispositions. From the Circuit Court's view, the function of this system is to track trial activity by recording documents filed on the case. The system additionally initiates cases in the Circuit Court, randomly assigning judges and case numbers. Recently, a scheduling module has been added for scheduling trials, mediations, etc., and for monitoring case deadlines.

System Summary:

The Saginaw County's Prosecutor's System is primarily an informational, case tracking system. It allows for all data on a case to be recorded and retrieval is done by defendant name, case number, witness name or complaint number. The system is cross-referenced with the court and jail systems. All scheduling and production of subpoenas are done on-line by court and/or prosecutor personnel. Dispositions are produced by the system and the system is capable of management reports, although programming is incomplete in this area. The system features the capability of holding a screen and allowing the user to check the jail system, for instance, and return to the screen in the prosecutor's system without returning to the menu. The system is used by the prosecutor to produce all warrants and the courts add all dispositional information. Users of the system are allowed access to designated information based on the authorization level of their passwords.

### System Summary:

This systems is designed to follow each individual from the point of admission to pre-trial detention, through court processing in the "upper" court (felony-level cases only) to final disposition.

The system is shared by all criminal justice agencies except law enforcement. It includes the Adult Detention Center, the District Court, the County Attorney, the Public Defender, Court Services (probation), and the Adult Corrections Facility. The system is used for both daily operations (e.g., facility housing assignments, court calendars) and management information (e.g., quarterly caseload reports and annual processing statistics).

### System Summary:

MOPICS is designed to collect and maintain pertinent data about a prosecutor's cases and keep complete docket and calendar information. MOPICS also maintains all victim restitution information and makes it available along with daily operational reports. MOPICS is the essential part of a total effort to provide prosecutors' offices in Missouri with an integrated computer-based solution to office systems processing, network processing, and data processing. The IBM System 36 system was selected to provide the computer facilities because of its unique capabilities in all three of the above areas of use. Currently, four prosecutors' offices have installed the MOPICS System on the System 36 computers and are utilizing the office system's facilities. The networking facilities will be installed at a later date.

#### System Summary:

The Case Docket/Docket Management System tracks caseloads and collects information for all the cases currently being processed by the Missouri Attorney General's Office. The case information includes name of case, number, court, office, attorneys, case type, date entered, assignment date, filing date, agencies represented, status, citation, difficulty, date closed, archive numbers, comments, etc. Related tracking includes all parties involved in a case and their relationship to the case; all events in the case, including motions, hearings; all important legal dates; all awards and expenses in the case; and the final disposition of the case.

#### System Summary:

This PROMIS System has been used as an automated case record-tracking system for issued felony and misdemeanor cases. As a link between the police and courts, PROMIS is a viable tool for immediately creating, updating or accessing case-file records. Various elements of a case record include descriptive information pertaining to the defendant, charge(s), litigation, witness/victim, court disposition, and sentencing.

System Summary:

This Dissolution/Uniform Support Law/Parent Locator Accounting System provides on-line entry, modification, and deletion of agency, case, and monetary information for dissolution, uniform support law, and parent locator cases. Various features include on-line inquiry by case, name and similar name; check printing; delinquency notification; bank account reconciliation; production of state reports; and production of management reports. Security and audit features are provided in addition to those usually provided by IMS. The system was designed, and is running, for multiple users. User information is kept in a database and maintained on-line rather than being hard-coded into programs, so new users can be added easily.

#### System Summary:

There are six different sections to the Criminal Justice System:

- 1) Booking Prisoners--On-line booking into jail after arrest. Daily jail roster, a stat report and monthly agency billing reports;
- 2) Justice of the Peace--Upon arraignment in Justice Court, the record is entered along with Citation Records. Automated on-line receipt of these records along with a monthly distribution report;
- 3) Warrants--Generated on citations and criminal records;
- 4) Civil Service--If any of the records processed in Justice Court or District Court need to have a summons served, the records are normally entered into the Civil Process for billing;
- 5) Attorneys--Victim/witness notification letters are generated from records entered; and
- 6) Case Assignment--Randomly assigns a judge to cases depending on the type of case.

#### System Summary:

This system is based on INSLAW's PROMIS 82 software. It is a "shared" system for the District Attorney, Justice Court (lower) and Trial Court. Cases received by the District Attorney are entered into the system by that office. The Justice's Court updates calendars, court events and dispositions. The District Attorney's Offices use documents prepared by the Trial Court clerk to update calendars, court events and dispositions.

#### System Summary:

This system currently consists of one CPU, seven terminals (one for each attorney and support staff), a laser printer and a dot matrix printer. Using an off-the-shelf database manager (Informix), forms have been created listing significant case, disposition, and hearing information. Information on any case can be called to the screen by searching on any field or combination of fields and a wide variety of variables. Using the report functions, witness letters are automatically generated on a routine basis. Reports are also routinely generated for scheduling, discovery and motion deadlines, and are listed by attorney. Pre-trials and jury selection listings are also generated on a routine basis. Word processing is included.

#### System Summary:

The State of New Jersey has implemented the PRDMIS/GAVEL computer system in every Prosecutor's Office/Superior Court in New Jersey. Seventy-five percent of the counties in New Jersey are on-line and currently using this system. The computer system tracks all information as the cases come into the Prosecutor's Office and all needed information is entered. The Prosecutor's Office also tracks all systems up to the indictment stage and is responsible for dispositions of downgrade or remanded case dismissals and no bills. The Court system is responsible for entering and tracking information on each case including indictment, pre-sentence, trial and sentencing. It is also responsible for entering and tracking all fugitives on the system. The system is capable of "kicking out" weekly/monthly reports.

#### System Summary:

PROMIS/GAVEL is a case management system that was developed by the Institute for Law and Social Research (INSLAW). It was tailored to be used by both the prosecutorial and judicial agencies of New Jersey to track criminal cases from the complaint stage through final disposition. A generalized inquiry package for the purpose of generating ad hoc reports was made available with the original software. As an extension to this software, New Jersey developed many in-house batch programs in order to produce grand jury and court calendars, subpoenas, notices, exception reports and various disposition reports. Out of 21 counties, this PROMIS/GAVEL system is now installed in 18 counties.

#### System Summary:

The PROMIS/GAVEL system that is currently in place is one that had its beginning in 1978. At that time, a committee consisting of Data Processing Personnel, County Prosecutors and representatives of the Administrative Office of the Courts (AOC) was formed to develop the current system. The system was designated as the "Prosecutors' Office Management Information System" with the acronym of PROMIS/GAVEL. The purpose of the system was to provide an automated recordkeeping system that could track cases from inception to adjudication and provide the ability to produce various system-generated reports.

#### System Summary:

PROMIS/GAVEL was designed at the state level to track all indictable offenses occurring in each individual county. In each county, the system is shared with the courts. Responsibility for entering information lies at the county level.

In Hudson County, the Prosecutor's side is responsible for entering information up to and including any indictment or Grand Jury action on each defendant. It is the responsibility of the courts to enter any action after the indictment.

PROMIS was also designed to alleviate some of the paperwork done manually. Presently, in Hudson County, Grand Jury calendars and subpoenas are generated by PROMIS.

#### System Summary:

The FACTS system tracks a case from the arrest to Supreme Court Disposition. It includes production of various legal documents such as the complaint, indictment and superior court information, and "Notices of Re-Arrest" (a memo to the Assistant District Attorney handling the pending case apprising the ADA of the defendant's re-arrest on other charges).

FACTS is used in the absence of the case file. It tracks all court dates, assigned ADA, judge bureau and bail conditions. In addition, it tracks New York City police officers' future availability schedules. An assistant DA is able to choose a court date based on police availability schedules without the police officer being present.

#### System Summary:

This 1980 Version of INSLAW PROMIS was brought on-line in 1982 in Superior Courts Bureau only. The Inquiry Package, Management Report Package and Formpac have been generalized. The B1900 processor is unable to accommodate the more than 30,000 lower court cases. The Burroughs version of PROMIS has not been enhanced or supported by INSLAW for several years. Plans are to upgrade the system with a new processor and software in near future.

#### System Summary:

AJIS is a case tracking and management information system designed for two major purposes: To provide assistant district attorneys and support staff with up-to-date information on cases pending in New York City criminal and New York State Supreme Courts; and to provide office managers with case history, statistical and other management information.

The system maintains information for each case in which an arrest has been made. This information includes the crimes the defendant is charged with; police officers and complainants; crime location; judges; assistant district attorneys and defense attorneys handling the case; past and future court dates and the actions taken on those dates; and case dispositions and sentences.

Agency: NYC Office of Prosecution, Special Narcotics Cts

---

#### System Summary:

The Special Narcotics Case Information System uses IBM System 36 utilities, IDDU, DFU Query 36. The Case Information System tracks all Special Narcotics felony cases from arrest through criminal court proceedings, indictment and supreme court adjudication. Grand Jury and bureau activity reports, special project reports and ad hoc reports are generated from the system.

#### System Summary:

DAIS is an on-line prosecutorial case tracking system designed to collect information pertaining to each felony case brought into the office at the earliest possible point and to track the progress of the case through final disposition and sentencing. The system operates on a Burroughs B6900 mainframe which is shared with other criminal justice agencies. Interagency data sharing is common practice. All data entry is performed on-line via remote terminals located near the information source. In addition to miscellaneous on-line inquiries available via terminals, DAIS provides a variety of management and statistical reports. Documents produced by DAIS include Witness Subpoenas and Case Cover Sheets (Case Jackets).

#### System Summary:

The PROMIS System is a case tracking/management information system. It provides the tracking of cases from the time of arrest through sentencing. It generates over 400 different types of management reports. The system generates the daily court calendars along with reports showing ages of defendants, types of crimes, dispositions and sentencing trends. Caseloads of ADA's and the status of cases are available at any time. The system provides a multitude of information regarding DWI arrests.

System Summary:

This Court Information System provides support to the entire court system statewide, particularly concentrating on operational support to trial courts, prosecutors, and public defenders. The criminal case processing components are built around clerk office work functions and extend to district attorney support to assist in their calendar preparation responsibility. The CIS is developed and operated by the AOC, which also provides computer service center support to the State Highway Patrol by operating a Computer-Aided Dispatch System for the Patrol on an around-the-clock basis.

#### System Summary:

D.A.'s Assistant is a public domain system and is written in DataFlex. The system maintains case-related information from point of referral to a prosecutor's office through expiration of sentence. It has ten main data files: Case Header, Defendants, Charges, Sentences, Related Persons, Court Events, Actions, Personal Information, Aliases and Related Persons. The system utilizes 23 translation tables for coded data elements including: offense code, attorney, judge, bond agent, case status, event type and sentence type. It also includes an ad hoc report generator.

#### System Summary:

The Lane County District Attorney's Office uses microcomputers that are "networked" by distributing data disks (fastback). The database programs used are dBase III+ and Foxplus. Wordstar 4.0 is used for very limited word processing. A series of PRG files has been written that does specific tasks--docketing, statistics, legal research and case management. These are customized for each workstation and special user menus are created for each task.

### System Summary:

This Criminal Justice System records information about a criminal case starting at the district justice level (the entry point) and continues through the disposition, sentencing, and monitoring of the collection of fines, costs and restitution. The system includes information about parties involved (a party is entered into the system once and can then be assigned to additional cases), incidents (can also be assigned to multiple cases), charges (a statute retrieval/reference system exists), filings, hearings/trial scheduling, bail transactions, date monitoring and adjustments.

System Summary:

The application for the Solicitor's Management System was written using Filepro 16+ (a product of the Small Computer Company) database package. It is very portable to many systems from MS-DOS to UNIX. By using a database management system to create the program, any changes or additions to Reports or screens can be performed quickly and economically.

#### System Summary:

This system can generate a daily report listing the actions that need to be taken on all current cases. Cases cannot slip through because of a missed filing date or court appearance. The system will also keep a history on all cases tried or handled and can print out all information necessary for the Texas Judicial Reports. The Hot Check System allows cross referencing of hot check writers by name, address, and driver's license number. It keeps track of the total number of hot checks written by an individual, the payee, date of check, fee charges, etc.

System Summary:

The Newport News CJIS is a set of automated subsystems which provides support to the City of Newport News criminal justice agencies. This system attempts to provide automated support to all agencies with minimum data redundancy and high-speed access. Data is shared among agencies to the maximum extent possible. The Newport News CJIS is supported by a medium-sized mainframe computer, remote and local terminals, lap computers, and personal computers with emulation boards. The Newport News CJIS is constantly being increased in function with the goal of achieving a state-of-the-art CJIS which supports each Criminal Justice Function.

| Offender Based Transaction Stats | Work Load Analysis |

---

#### System Summary:

Fraud Case Tracking was developed for the King County Prosecutor's Fraud Division to assist in tracking cases at different stages. There was a great deal of storage space reserved for paperwork from old cases. This space was a big overhead item to the department with very little payback. A lot of this storage will be made available as past cases are entered into the system. The system creates a case number internally. This number is unique to one specific case. The case can be inquired upon with this number or by any name associated with the case. Cause numbers and crime codes are tracked by defendant within case. All names are kept and can be used to inquire on within a specific case. Multiple matches of a name trigger a multiple match screen for "point and shoot" selection. Probation information, sentence information, confinement information, fines, etc. are tracked by defendant. There are numerous dates in the system for scheduling, statistical reporting, DPA allocation, scheduling, etc. All names retrieved are processed through a phonic name search routine. There are many other case fields such as storage file area, nature of the case information, type of case, etc.

---

#### System Summary:

PROMIS can be a defendant or case-based tracking system. King County Prosecutor chose a defendant-based system. The system tracks a defendant from the time a police charge is received in the office until the defendant is released or sentenced. All data is entered on-line, using SCREENPAC (optional sub-package). All operational reporting (calendaring, filing logs, victim letters, etc.) are produced using another optional package called FORMPAC. The system allows inquiry by defendant ID, name, cause number, and prosecutor case or referral number. PROMIS security restricts data at the record level, and has very limited security at the field level. PROMIS has a management report package that, because of the way we defined the record hierarchy, does not count data properly. To meet the Prosecutor's need for statistical reporting, the Statistical Analysis System (SAS) is used.
