PREFACE

The Juvenile Court Statistics series is, and has been since 1929, the primary source of information on the activities of the nation's juvenile courts. In 1923 a committee of the National Probation Association outlined the goals for the series as follows:

To furnish an index of the nature and extent of the problems brought before courts with juvenile jurisdiction;

To show the nature and extent of the services given by these courts in such a way that significant trends could be identified; and

To show the extent to which service given by courts has been effective in correcting social problems.

The first Juvenile Court Statistics report was published in 1929 and described cases handled during 1927 by 42 courts from across the nation. In this era very few courts kept statistics or statistical records on the cases they handled. At the request of the project, courts volunteered to complete a statistical reporting card on each delinquency, status offense and dependency case handled, along with a card on each youth discharged from probation. The completed cards were sent for tabulation to the Children's Bureau within the U.S. Department of Labor. The statistical reporting cards captured information on the age, sex, and race of the youth referred to court, the living arrangement of the child at the time of referral, the reason for referral, the source of referral, the place the child was held pending a disposition, the manner of dealing with the case, and the disposition of the case. These individual case records were summarized into tables presenting a profile of the cases handled by reporting courts.

It was emphasized in the early reports that the data collection forms were designed to obtain detailed information on many aspects of a case while requiring as little time as possible to complete. However, case-level reporting designed primarily to meet federal needs could not be maintained. As early as 1932 the reports alluded to the disproportionately high cost of continuing direct contact with a large number of courts. By 1937 case-level reporting of dependency cases was abandoned. By the mid-1940's delinquency and status offense case-level reporting, the founding concept of this reporting series, was determined to be impractical. In 1946 the primary focus of the reporting system became aggregate counts of the number of delinquency/status offense, dependency and special proceedings cases handled by courts with juvenile jurisdiction. Courts were asked annually to complete a single form which recorded the number of various case types they had processed in the previous year. Specific case characteristics (e.g., age of youth at referral, reason for referral, and disposition) were no longer collected, but were abstracted, where possible, from the annual reports of state agencies that compiled information on juvenile court or probation activities. Case-level data, and the analysis capabilities they supported, had been lost at the federal level.

In 1957 the Children's Bureau, which had moved to the Department of Health, Education and Welfare, initiated a new data collection program which, for the first time in the history of the series, enabled the production of national estimates of juvenile court activity. A stratified probability sample of more than 500 courts was constructed and each asked to provide annual aggregate counts of the number of delinquency/status offense and dependency cases they handled. While efforts continued to abstract case characteristics from existing annual reports, the sole concern of the sample was the generation of national juvenile court caseload estimates. The integrity of the sample proved difficult to maintain over the years, while a growing number of courts outside the designated sample became able to report the necessary aggregate statistics. After a decade the project adopted a policy

of collecting annual case counts from any court that could provide them and generated national estimates from this nonprobability sample. At about this time the project stopped abstracting case characteristics from annual reports and the resulting *Juvenile Court Statistics* reports contained only global counts of the volume of court activity.

Therefore, the contents of *Juvenile Court Statistics* reports in the early 1970's were very different from the original conceptualization of the work. The reporting series which was implemented to describe the nature and extent of the problems faced and the services delivered by juvenile courts contained only total caseload statistics. The data necessary to achieve the original goals of the project were no longer collected. The focus had turned from the collection of detailed case-level data to the secondary analysis of available court-level statistics.

It was during this period that the National Center for Juvenile Justice (NCJJ) assumed responsibility for producing the *Juvenile Court Statistics* series. Following the passage of the Juvenile Justice and Delinquency Prevention Act of 1974, the Office of Juvenile Justice and Delinquency Prevention (OJJDP) within the U.S. Department of Justice was delegated primary responsibility for juvenile delinquency activities at the federal level. Since the *Juvenile Court Statistics* series was the only source of nationwide information on the judicial processing of juvenile delinquents, the Department of Justice assumed responsibility for the reporting series. In 1975 NCJJ was awarded a grant by OJJDP to continue the *Juvenile Court Statistics* series. It was agreed that NCJJ would continue the data collection and reporting procedures established by the Children's Bureau to insure reporting continuity, while also investigating procedures for improving the quality of nationwide reporting.

As the Children's Bureau had done, NCJJ wrote to the state agencies across the country asking them to complete the annual juvenile court statistics form. Most states completed the form, but some also wrote back and offered to send copies of the automated case-level data that they had begun to collect to meet their own information needs. The nature of available data had changed. During the mid-1970's the nation saw a large growth in automated recordkeeping and statistical reporting systems in state and local juvenile courts. Even though courts were not completing a common statistical card, the information they were collecting on each case was similar. Through careful processing these automated records could be combined to produce the detailed national portrait of juvenile court activity which had been one of the original goals of the project.

Between 1975 and 1985 the project functioned along two converging paths. One path, which resulted in the production of the 1974 through the 1983 Juvenile Court Statistics reports, continued the data collection and reporting procedures utilized by the Children's Bureau. These reports continued to focus only on the volume of cases handled by juvenile courts. The second path first explored and then collected the automated case-level records generated by state and local juvenile court information systems. To disseminate these data a new reporting series was developed --Delinquency in the United States. The 1975 through 1983 Delinquency reports contained national estimates of the types of delinquency and status offense cases referred to juvenile courts, a description of the youth involved and the court's responses to these cases. The Delinquency reports contained the detail found in the Juvenile Court Statistics reports of the 1920's and 1930's. From the first edition of the Delinquency series, it was realized that the future of the Juvenile Court Statistics series lay in the use of these automated case records. However, to maintain the integrity of the Juvenile Court Statistics series it was decided to continue both series until a detailed working knowledge of the case-level data and their associated analysis problems was established. When this point had been reached, it was decided that the Juvenile Court Statistics series would begin to use the case-level data as its primary source of information and the Delinquency series would be discontinued. These paths converged with the 1984 edition of Juvenile Court Statistics. For the first time since the late 1930's, a Juvenile Court Statistics report contained a detailed description of the demographic, offense and processing characteristics of delinquency and status offense cases. The goals of the reporting series and the content of the report had returned to the original design of those who laid the foundation for this work over 60 years ago. Through the years the project has come to depend on the secondary analysis of available data, instead of attempting to mount an independent data collection system. In the past the secondary analysis of available data failed to provide the detailed information that was needed to support national information needs. However, the quality of available data has improved so dramatically in recent years, with the introduction of client tracking and management information systems, that policy makers and researchers can now find the detailed information on juvenile courts they require in the Juvenile Court Statistics series.

EXECUTIVE SUMMARY

This report, the 59th in the *Juvenile Court Statistics* series, describes the number and characteristics of delinquency and status offense cases disposed during 1985 by courts with juvenile jurisdiction. This report is designed as a reference document. Some important national characteristics, trends and issues are addressed along with findings that may raise questions and stimulate discussion. In the style of a reference document, the interpretations of this information are largely left to the reader.

In most juvenile justice systems delinquency and status offense cases are referred to a juvenile court intake unit for screening. This intake unit determines if the matter should be handled informally or formally through the filing of a petition which requests an adjudicatory or waiver hearing. This report presents information on both petitioned and nonpetitioned delinquency and status offense cases, but national estimates are presented only for petitioned cases.

PETITIONED DELINQUENCY CASES

In 1985 the nation's juvenile courts petitioned and formally disposed an estimated 534,000 delinquency offense cases. This represents a 7% increase over the workload of the courts in 1984. A youth was charged with a property offense (e.g., burglary, larceny-theft, trespassing, vandalism) in 55% of all formally handled delinquency cases in 1985. In 21% of the delinquency cases the charge was a person offense (e.g., robbery, aggravated and simple assault) and in 6% a drug law violation. Between 1984 and 1985 the number of person offense cases handled by the courts increased by 12%, while the number of property offense cases increased by 5% and the number of drug law violation cases increased by 20%.

Three of every four petitioned delinquency cases disposed by the courts in 1985 were referred by law enforcement agencies. The others were referred by parents, schools, victims, probation officers, and others. Youth in 34% of all formally processed delinquency cases were securely detained at some point between referral to court and disposition, with person offense cases the most likely to be detained. Two percent of all petitioned delinquency cases in 1985 were waived to criminal court where the youth was processed as an adult. In 64% of petitioned delinquency cases the youth was adjudicated delinquent. Of these youth 29% were placed out of the home in a residential facility and 57% were placed on formal probation.

PETITIONED STATUS OFFENSE CASES

In 1985 the nation's juvenile courts petitioned and formally disposed an estimated 88,000 status offense cases. This represents an 11% increase over the workload of the courts in 1984. The status offense caseloads were nearly equally divided among runaway, truancy, ungovernable and status liquor law violation cases.

While the vast majority of status liquor law violation cases were referred by law enforcement agencies in 1985, no more than one-quarter of runaway, truancy or ungovernable cases came from law enforcement sources. Youth in 18% of all formally processed status offense cases were securely detained at some point between referral to court and disposition. One-third of all runaway cases were detained, compared to one-fifth of all ungovernable cases and one-tenth of all truancy and status liquor law violation cases. In 60% of petitioned status offense cases the youth was adjudicated. One-quarter of adjudicated status offenders were placed out of the home in a residential facility and one-half were placed on formal probation.

ACKNOWLEDGMENTS

A work of this magnitude would have been impossible without the cooperation of each of the state and local agencies which took the time to honor our request for data and documentation. The following agencies contributed 1985 case-level data or court-level aggregate statistics to the National Juvenile Court Data Archive:

Alabama: Alabama Department of Youth Services

Alaska: Alaska Court System

Arizona: Supreme Court of Arizona and the Maricopa County Juvenile Court

Arkansas: Arkansas Judicial Department

California: Bureau of Criminal Justice Statistics and Special Services; Administrative Office of the Courts; the Superior Court of the County of Los Angeles; and the Los Angeles

Probation Department

Colorado: Colorado Judicial Department

Connecticut: Chief Court Administrator's Office

Delaware: Family Court of the State of Delaware

District of Columbia: District of Columbia Courts

Florida: Department of Health and Rehabilitative Services; Children, Youth and Families

Program Office

Georgia: Georgia Administrative Office of the Courts and the Fulton County Juvenile

Court

Hawaii: The Judiciary, Administrative Office of the Courts

Idaho: State Administrative Office of the Courts

Illinois: Administrative Office of the Illinois Courts and the Cook County Juvenile Court

Indiana: Division of State Court Administration

Iowa: Iowa Department of Human Services

Kansas: Kansas Bureau of Investigation, Statistical Analysis Center

Kentucky: Kentucky Administrative Office of the Courts

Louisiana: Judicial Council of the Supreme Court of Louisiana

Maine: Administrative Office of the Court

Maryland: Juvenile Services Agency

Massachusetts: Office of the Commissioner of Probation

Michigan: State Court Administrative Office

Minnesota: Minnesota Supreme Court Information System

Mississippi: Mississippi Department of Youth Services

Missouri: Department of Social Services, Division of Youth Services

Montana: Juvenile Justice Bureau, Board of Crime Control

Nebraska: Nebraska Crime Commission

Nevada: Clark County Juvenile Court Services

New Hampshire: New Hampshire Judicial Council

New Jersey: Administrative Office of the Courts

New Mexico: Administrative Office of the Courts

New York: Office of Court Administration and the State of New York, Division of

Probation

North Carolina: Administrative Office of the Courts

North Dakota: Supreme Court, Office of State Court Administrator

Ohio: Supreme Court of Ohio and the Cuyahoga County Juvenile Court

Oregon: Office of the State Court Administrator

West Virginia: West Virginia Court of Appeals

Wisconsin: Supreme Court of Wisconsin

Wyoming: Supreme Court of Wyoming, Court Coordinator's Office

This report is a product of the National Juvenile Court Data Archive. The activities of the Archive are funded by grants from the Office of Juvenile Justice and Delinquency Prevention, U.S. Department of Justice. This phase of the project was monitored by Lois Keck and Richard Sutton. The advisors to the Archive are Alfred Blumstein, Carnegie Mellon University; Carol Burgess, Maricopa County Juvenile Court; David Farrington, Cambridge University; Daniel Kasprzyk, U.S. Bureau of the Census; and Malcolm Klein, University of Southern California. Their support and involvement in the work are deeply appreciated.

INTRODUCTION

This report, the 59th in the *Juvenile Court Statistics* series, describes the number and characteristics of delinquency and status offense cases disposed in 1985 by courts with juvenile jurisdiction. Such courts may handle other case types, including traffic, child support, adoption, termination of parental rights, and those involving juveniles brought before the court because they were alleged to be victims of abuse or neglect. However, the major focus of this report is the court's handling of juveniles charged with a law violation (a criminal law violation or a status offense).

STRUCTURE OF THE REPORT

Chapters 1 and 2 present national estimates of the delinquency and status offense cases formally handled by courts with juvenile jurisdiction in 1985. These chapters provide a detailed portrait of these cases including the offenses involved, sources of referral, detention practices and case dispositions. This picture is based on analyses of over 337,000 individual case records from 1,133 courts with jurisdiction over 49% of the nation's juvenile population at risk and court-level statistics from an additional 345 courts with jurisdiction over 10% of the nation's juvenile population at risk. Thus, national estimates were generated using data from courts with jurisdiction over 59% of the nation's youth population. A description of the statistical procedures used to generate these estimates is found in Appendix A.

The national estimates found in Chapters 1 and 2 are limited to the most commonly reported case characteristics. The individual delinquency and status offense case records do, however, support more detailed subnational analyses. Chapter 3, entitled Data Briefs, contains a large set of subnational tables which shed light on many aspects of juvenile court delinquency and status offense caseloads which are not found in the first two chapters.

Few terms in the field of juvenile justice have widely accepted definitions. The terminology used in this report has been carefully developed and employed to communicate, as precisely as possible, the findings of this work. The reader is asked to consult Appendix B, the Glossary of Terms, when there is some doubt concerning the exact definition of a term. The conscientious reader is encouraged to study the glossary before reading this report.

Appendix C presents a listing of the number of delinquency/status and dependency cases handled by individual juvenile courts in 1985. Each data set is footnoted to indicate the source of the data and its unit or units of count. Since courts report their statistical data using various units of count (e.g., cases disposed, offenses referred, offenses petitioned, cases terminated), the reader is cautioned against making cross-jurisdictional comparisons before studying the accompanying footnotes.

DATA QUALITY

The data collection procedures utilized by this work differ substantially from those of the other major national data collection projects which focus, as this work does, on the juvenile justice system's response to law-violating youth. The other projects, the Uniform Crime Reporting Program and the Children in Custody Census, collect uniform data designed specifically to meet each project's reporting requirements. This work relies on the secondary analysis of data originally compiled by juvenile courts or juvenile justice agencies to meet their own information and reporting needs. As a consequence, the incoming data are not uniform across jurisdictions. In addition, the data do not come from a scientifically selected probability sample of courts, but rather from those juvenile court systems which routinely collect and willingly disseminate their data. This approach has its inherent

strengths and weaknesses. Therefore, to properly assess the validity of the information found in this report, critical readers must balance the advantages and disadvantages of analyzing available data to meet national reporting needs.

One advantage of this approach is the accuracy of the available data. These data sets were generated by information systems that were designed by state and local juvenile courts specifically to meet their own information needs. Therefore, the validity of the data is important to those who record the information because the data are used to facilitate the daily operations of the court and/or to provide information for planning and evaluation. Consequently, these data have more face validity than data collected by court staff merely to meet national reporting requirements.

One potential disadvantage, at least for national reporting, is the heterogeneity of the reported data. Data suppliers collect and report information using their own definitions and coding categories. Variables reported in some data sets were not contained in others. Even when similar data elements exist, they sometimes have inconsistent definitions or overlapping coding categories which limit the amount of detail that can be preserved when the data are merged. To combine information from various sources, the data were recoded into standardized coding categories which at times sacrificed detail in order to increase sample size. The standardization process required an intimate understanding of the development, structure, and content of each data set received. Codebooks and operation manuals were studied, data suppliers interviewed, and data files analyzed to maximize the understanding of each information system. Every attempt was made to insure that only compatible information from the various data sets was placed into the standardized data file.

UNIT OF COUNT

In measuring its activity a juvenile court may count the number of offenses or cases referred; the number of offenses, cases or petitions filed; the number of disposition hearings or the number of youth handled. Each unit of count has its own merits and drawbacks. From its beginning this reporting series adopted as its unit of count the case disposed. In this unit of count a case represents a youth processed by a juvenile court on a new referral regardless of the number of charges contained in that referral. A youth charged with four burglaries in a single referral represents a single case, while a youth referred to court intake for three burglaries and referred again the following week on another burglary charge represents two cases. The term disposed means that some definite action has been taken or that some plan of treatment has been decided upon or initiated. It does not necessarily mean that the case is closed or terminated in the sense that all contact with the youth or his/her family has ceased.

In general, a case can be disposed in one of two ways, either informally or formally. In an informally handled (or nonpetitioned) case, court intake personnel decide to adjust or divert the matter prior to filing a formal petition or affidavit which requests an adjudicatory or waiver hearing. In most nonpetitioned cases the youth is released (at times with a warning), referred to another agency for voluntary services, or agrees voluntarily to pay a fine or some form of restitution. In a formally processed (or petitioned) case a decision is made by court intake personnel to file a petition, affidavit or other legal instrument requesting an adjudicatory or waiver hearing before a judge. In the adjudicatory hearing the court is asked to assume jurisdiction over the youth. If the youth is adjudicated, the court may order the youth to pay a fine or restitution, place the youth on probation, or place the youth out of the home in a residential treatment program. In a waiver (transfer or certification) hearing the court is asked to determine if the youth should be transferred to the criminal court for prosecution as an adult.

The traditional juvenile court handled both formal and informal cases. In recent years, though, the responsibility for juvenile court intake screening has become more and more the duty of

the executive branch of government. In many communities county attorneys and/or youth service agencies provide the screening and diversion services that traditionally were a part of the juvenile court. Due to this dispersion of the intake function in some jurisdictions, the process of developing national estimates of juvenile court activity has encountered problems in the operational definition of juvenile court intake. Juvenile court systems are relatively similar from the point at which a petition is filed and an adjudicatory or waiver hearing is requested through formal disposition, but any attempt to estimate the number and characteristics of cases handled informally in the juvenile justice system nationally encounters numerous definitional and conceptual problems. Consequently, the national estimates presented in this report focus only on formally handled or petitioned delinquency and status offense cases. Those interested in the nature of informally handled cases are directed to Chapter 3 of this report.

VALIDITY OF THE ESTIMATES

The national estimates found in this report were generated from data reported by a large nonprobability sample of courts. However, because it is a nonprobability sample, statistical confidence in the estimates can not be mathematically determined. If a probability sampling design could be implemented, and those courts selected persuaded to report, statistical confidence in the national estimates would be increased. The advantages of such a procedure are clear, but the simple fact is that at the present time it would be difficult (if not impossible) to install such a national data collection system in the juvenile courts. Courts that have information systems already in place would resist modifying their systems or installing parallel systems to meet national reporting specifications. Courts that have survived this long without an information system would not install one designed to meet another's needs without both economic incentives and the expectation that the system would support the activities of the local court. Therefore, the present procedure, the secondary analysis of available data, is the best practical alternative for developing a picture of the activities of the nation's juvenile courts.

The procedures developed to generate national estimates of court activity from the nonprobability sample control for many factors: the size of a community; the demographic composition of a community's youth population; the volume of cases referred to reporting courts; the age, race and offense characteristics of those cases; and the nature of each court's jurisdictional responsibilities (i.e., upper age of original jurisdiction). Imputation techniques employed in this work incorporate these factors as well as many other related case characteristics. Even with all these controls, no procedure can completely overcome the fundamental threats to validity caused by the use of a nonprobability sample.

However, it is possible to compare estimates of similar attributes that are developed from these data to estimates developed by other national data systems. For example, the FBI's *Crime in the United States 1985* (a data collection program also based on a nonprobability sample) provides an estimate of the number of cases law enforcement agencies referred to juvenile courts in 1985, while the Juvenile Court Statistics program provides an estimate of the number of cases juvenile courts received from law enforcement in 1985. As is detailed in the methods section (Appendix A) of this report, the difference between the two estimates for 1985 is less than 4%, a finding which supports the validity of both estimates and the representativeness of both data collection systems.

CHANGES INTRODUCED IN THIS REPORT

Three important changes to this reporting series are introduced in this edition of *Juvenile Court Statistics*. First, the estimation procedure, which in previous years controlled for variations in the size of a jurisdiction and the age profile of its youth population at risk of juvenile court referral, has been enhanced to also control for each community's racial composition and the nature of the

offense charged. These controls were added to increase the representativeness of the nonprobability sample and the confidence in the national estimates.

The second change is found in the content of the national estimates. In past reports national estimates were based on an assumption that a generic model of a juvenile court could be applied to all court systems across the country. In this generic model, a juvenile court was defined as a court with jurisdiction over juveniles (even though the court may be labelled a circuit, district or county court and may also have jurisdiction over adults) and, where necessary, the nonjudicial agencies that provided the intake screening functions of the traditional juvenile court. The model was easily applied in states where the courts with juvenile jurisdiction had primary responsibility for their intake screening function and provided services to both nonadjudicated and adjudicated youth. However, in more and more states a set of social service agencies (depending on the nature of the case) along with the prosecutor's office perform the intake screening and diversion roles that were the juyenile court's responsibility. It has become increasingly difficult, due to the range of agencies that are involved in this phase of the juvenile justice system, to assure that the data collection system is capturing a complete census of what are called informal, nonpetitioned or diverted cases. In earlier reports national estimates were developed to describe case processing from the point in the juvenile courf process where a youth charged with a law violation was initially screened to determine if an adjudicatory or waiver hearing was necessary. For the reasons stated, beginning with this edition of Juvenile Court Statistics, national estimates describe case processing from the point immediately after the decision has been made to petition and formally process the case. Subnational information on the nature and relative volume of informal, nonpetitioned or diverted cases will continue to be presented in Chapter 3 of the report.

Finally, the third change introduced in this edition of *Juvenile Court Statistics* is the separate presentations of delinquency and status offense information. Courts with juvenile jurisdiction may handle a wide range of case types, including abuse, neglect, custody, termination of parental rights and traffic cases. To present combined estimates of delinquency and status offense cases may lead some to misinterpret the statistics as representing total juvenile court workload statistics. Even more importantly, however, the demographic and court processing characteristics of delinquency and status offense cases are so different that they should not logically be combined.

FINAL COMMENTS

This report presents a description of the delinquency and status offense caseloads of the juvenile courts in 1985. Some important national characteristics, trends, and issues are highlighted along with selected findings that may raise questions and stimulate discussion. However, the report is designed primarily as a reference document and, consequently, interpretations of the information presented are largely the responsibility of the reader.

The data used in this report are stored in the National Juvenile Court Data Archive (NJCDA) and are available for study. With the prior permission of the original data suppliers, archived data files can be copied and shipped for detailed analysis. With the assistance of NJCDA staff, selected files can be merged for cross-jurisdictional and/or longitudinal analyses. Or, if requested, analyses can be performed by NJCDA staff to meet specific needs and answer specific questions. NJCDA contains the most detailed information available on youth who come in contact with the juvenile justice system and on the activities of the nation's juvenile courts. The National Juvenile Court Data Archive has been created to facilitate juvenile justice research and its contents are available to policy makers and researchers working in this important area.

CHAPTER 1: NATIONAL ESTIMATES OF PETITIONED DELINQUENCY CASES, 1985

COUNTS AND TRENDS

A delinquency offense is an act committed by a juvenile for which an adult could be prosecuted in a criminal court. Courts with juvenile jurisdiction petitioned and formally disposed an estimated 534,000 delinquency cases in 1985 (Table 1). A property offense, such as shoplifting, burglary, or trespassing, was charged in 55% of these cases (Figure 1). In 21% of delinquency cases the charge was an offense against the public order, such as disorderly conduct, public drunkenness, contempt of court or escape from an institution. In 18% of delinquency cases the youth was charged with a person offense, such as robbery, aggravated or simple assault. Finally, 6% of all formally processed delinquency cases in 1985 involved a drug law violation, such as possession or sale of a controlled substance.

Between 1984 and 1985 the number of delinquency cases formally processed by juvenile courts increased by 7% (Table 2). The largest growth was experienced in drug law violation cases, where the caseloads increased by more than 20%. The number and rate of cases within each of the other three general offense categories also increased, but not as much. Between 1984 and 1985 the number of person offense cases formally processed by the courts increased by more than 12%, while the number of property and public order cases increased by approximately 5%.

SOURCE OF REFERRAL

Delinquency cases are referred to court intake by law enforcement agencies, social service agencies, schools, parents, probation officers, and victims. Law enforcement officers were the primary source of referral of delinquency cases in 1985. Overall, 3 of every 4 delinquency cases were referred to courts by law enforcement officers, but there were wide variations across offense categories (Figure 2). Ninety-one percent of drug law violations were referred by law enforcement agencies, as were 85% of property cases and 79% of person offense cases. In contrast, only 52% of public order offense cases were referred by law enforcement sources, related to the fact that this offense category contains probation violations and contempt of court cases which were predominantly referred by court personnel.

A MODEL OF JUVENILE COURT PROCESSING

Although case processing procedures are not uniform across courts with juvenile jurisdiction, cases generally proceed along a version of the following path. Cases referred to juvenile courts are screened by an intake department.¹ The intake officer (or the prosecutor) may decide to dismiss the case for lack of legal sufficiency or to resolve the matter informally. These informal dispositions could include a voluntary referral to a social agency for services, informal probation, or the payment of fines or some form of restitution. (Information on informally handled cases can be found in Chapter 3 of this report.)

However, intake may decide the case should be handled formally. In these instances a petition is filed requesting an adjudicatory or waiver hearing and the case is placed on the court calendar. For various reasons a small number of petitions are dismissed before the adjudicatory or waiver hearing is actually held. If an adjudication hearing is held, the case can be dismissed or continued in contemplation of dismissal with recommendations given that some actions be taken

¹In some states intake screening is a court function. In others it is performed by a state department of social services or the prosecutor's office.

(e.g., paying restitution or voluntarily attending a drug counselling program) prior to the final adjudication decision. On the other hand, the youth may be adjudicated (judged) a delinquent or status offender and the case then would proceed to a disposition hearing. During the disposition phase of court processing, the judge, generally after reviewing a predisposition report, determines the most appropriate sanction. The range of options available to courts varies from jurisdiction to jurisdiction, but could include commitment to an institution for delinquents; placement in a group or foster home, or other residential facility; probation; referral to an outside agency, day treatment or mental health program; or imposition of a fine, community service or restitution order. If a waiver hearing is requested instead of an adjudicatory hearing, the juvenile court judge is asked to decide whether or not the case should be waived to a criminal court for prosecution. In most instances in which the waiver request is denied, the case is scheduled for an adjudicatory hearing.

A youth may be placed in a secure detention facility at various points in the progression of a case through the juvenile justice system. Detention practices vary from state to state and from court to court. Law enforcement agencies might detain juveniles in jails or lock-ups, court intake officials may order detention, and a judicial decision to detain or continue detention may occur before or after adjudication or disposition. This report assesses only those secure detentions that occur in a restrictive facility under court authority while the youth is being processed by the court. Therefore, secure detentions by law enforcement prior to referral to court intake and those detentions that occur after the disposition of the case (e.g., temporary holding of a youth in a detention facility while awaiting availability of a court ordered placement) are not included in the discussion that follows.

DETENTION

Youth in 34% of all formally processed delinquency cases disposed in 1985 were held in a secure detention facility at some point between referral to court intake and case disposition (Figure 3). Youth charged with a property offense were the least likely to be securely detained. While 38% of the youth in each of the other three offense categories were held in a secure facility, only 30% of property offenders were securely detained. Even though property offenses were the least likely to be detained, the high volume of such cases within the courts resulted in the finding that half of the 181,000 delinquent youth held in secure detention in 1985 were charged with a property offense (Figure 4).

DISPOSITION

Two percent of all petitioned and formally processed delinquency cases disposed in 1985 were waived to criminal court (Figure 5). The youth was adjudicated delinquent by the court in 64% of all formally processed delinquency cases. Eighteen percent of all petitioned delinquency cases resulted in the youth being placed out of the home and 37% were placed on formal probation. Looking at this in another way, 57% of adjudicated delinquents were placed on formal probation and 29% were placed out of the home in a residential facility. A disposition was ordered in another 10% of adjudicated cases which required the youth to pay restitution or a fine, to participate in some form of community service or to enter a treatment or counselling program. Finally, in a small number of cases the youth was adjudicated but was then released. In all, 57% of all formally processed delinquency cases in 1985 resulted in either a waiver to criminal court, an out-of-home placement or a formal probation order.

The profile of dispositions received varied with the nature of the offense (Figure 6). Person offense cases were the most likely to be waived to criminal court; 3% of person offense cases were waived, compared to 2% of property offense cases, 1% of drug law violation cases and less than 1% of public order offense cases. However, even though youth charged with a person offense were the most likely to be waived, they were involved in only one-third of the waivers in 1985. Most youth

waived to criminal court were charged with a property offense (Figure 7). The youth was charged with a person offense in 32% and with a drug law violation in 5% of all waived cases.

Person offense cases were the least likely to be adjudicated. Approximately two-thirds of all petitioned property, drug and public order offense cases were adjudicated in 1985, compared to 58% of petitioned person offense cases (Figure 6). Youth most likely to be placed out of the home by the court were those charged with a public order offense; an out-of-home placement occurred in nearly one-fourth of all such cases. This higher rate of placement may be explained by the fact that this offense category includes escapes from institutions, probation and parole violations. In comparison, about one-fifth of all person, property and drug law violation cases resulted in an out-of-home placement. Most youth placed out of the home in 1985 were charged with a property offense. Fifty-one percent of delinquent youth placed out of the home were charged with a property offense, while 25% were charged with a public order offense, 18% with a person offense and only 6% with a drug law violation (Figure 8).

In each of the four general delinquency offense groups, probation was the most common disposition. Forty-three percent of all formally processed drug offense cases resulted in an order of probation, compared to 39% of property, 33% of public order and 32% of person offense cases (Figure 6). Once again, property offenders made up the largest group of youth on probation. Fifty-eight percent of youth placed on probation in 1985 were charged with a property offense (Figure 9).

AGE AT REFERRAL

Fifty-three percent of all formally processed delinquency cases in 1985 involved youth who were below the age of 16 at the time of referral (Figure 10). Youth below the age of 16 were involved in over half of the person and property cases handled in 1985, but only one-third of the drug law violations. The offense profiles of delinquency cases involving youth referred before or after their sixteenth birthdays were similar (Figure 11). The majority of referrals in both groups were for a property offense and about one referral in five was for a person offense. The largest difference between the two age groups was found in the proportion of cases charged with a drug law violation. Drug law violations were charged in 4% of all cases of youth who were referred before their sixteenth birthdays, but in 9% of all cases involving older youth.

The delinquency case rate increased continuously with age (Figure 12). For example, the courts processed 31.8 delinquency cases involving youth who were 15 years of age at the time of referral for every 1,000 15-year-old youth at risk in 1985.² The case rate for 16-year-olds was 26% higher, and for 17-year-olds 47% higher, than the rate for 15-year-olds. Case rates also increased continuously with age within each of the four general delinquency offense categories with drug law violation case rates showing the sharpest increase in the older age groups (Figure 13).

The upper age of juvenile court jurisdiction is defined by statute in each state. In 1985, the upper age of court jurisdiction in three states (Connecticut, New York and North Carolina) was 15, meaning that a youth arrested at age 16 or older would be under the jurisdiction of the criminal court in these states. In eight states (Georgia, Illinois, Louisiana, Massachusetts, Michigan, Missouri, South Carolina and Texas) the upper age of jurisdiction was 16. In one state (Wyoming) the upper age of jurisdiction was 18. In all other states the upper age of juvenile court jurisdiction was 17. Therefore, not all 17-year-olds in the nation were under the original jurisdiction of a juvenile court (e.g., 17-year-olds in New York). The case rates presented in this report control for these variations in youth population at risk of referral to juvenile court.

The use of secure detention in formally processed delinquency cases increased somewhat in the younger age groups (Table 3). However, about one in every three youth above the age of 13 were securely detained.

With the exception of waiver, the dispositional profiles of the younger and older youth were very similar (Figure 14). The probability of waiver was substantially greater for older youth. In 1985, 3% of all formally processed delinquency cases involving youth 16 years of age or older were transferred to a criminal court, compared to less than 0.5% of the cases involving younger youth. The probability of adjudication was comparable for both age groups, as was the probability that the youth would be placed out of the home or on formal probation.

SEX

Between 1984 and 1985 the number of petitioned male delinquency cases increased by nearly 8%, while the volume of female cases increased by nearly 5% (Table 2). Males were involved in 85% of all formally processed delinquency cases in 1985 (Figure 15). The offense profiles of male and female delinquency cases were similar (Figure 16). For both sexes, most referrals were for property offenses. For both sexes, about one referral in five was for a person offense and one in twenty for a drug law violation.

The male delinquency case rate was more than 5 times greater than the female rate, 33.5 compared to 6.3 cases per 1,000 youth at risk (Table 2). Both male and female delinquency case rates increased continuously with age, but male rates increased more sharply in the older age groups (Figure 17). For example, the delinquency case rate for 17-year-old males was 53% greater than the 15-year-old male rate, while the 17-year-old female rate is only 14% greater than the corresponding 15-year-old female rate. Male rates increased with age in each of the four general offense categories. Female rates for drug law violations increased substantially with age; however, in the other three offense categories, female rates either leveled off or declined in the older age groups (Figure 18).

Overall, males charged with a delinquency offense were detained slightly more often than females (Table 4). The largest difference was found in person offense cases. Forty percent of males charged with a person offense were securely detained compared to 31% of females.

Male delinquency cases were more likely to be waived to criminal court than were female cases (Figure 19). In 1985, 2% of all males formally processed for a delinquency offense were transferred to adult court, compared to less than 1% of the female cases. Male cases were also more likely to be adjudicated once petitioned and somewhat more likely to be placed out of the home at disposition. In contrast, one-third of both male and female delinquency cases were placed on formal probation.

RACE

Between 1984 and 1985 the number of petitioned delinquency cases involving white youth increased by nearly 6%, while nonwhite cases increased by more than 10% (Table 2). Whites were involved in 67% of all formally processed delinquency cases in 1985 (Figure 20).³ White youth were responsible for about two-thirds of all property, drug law violation and public order cases; however, they were involved in only half of all person offense cases. For both racial groups, over half of all

³Eighty-one percent of the nation's youth population in 1985 was classified as white by the U.S. Bureau of the Census. In both the population and court data, nearly all Hispanics were included in the white racial category.

referrals were for a property offense (Figure 21). Twenty-seven percent of all nonwhite delinquency cases involved a person offense compared to only 13% of white delinquency cases.

The nonwhite delinquency case rate was more than twice the white rate, 35.5 compared to 16.8 cases per 1,000 youth at risk (Table 2). The differences between the white and nonwhite rates decreased with age (Figure 22). While the nonwhite case rates for property, drug law violations and public order cases were about twice the white case rates, the nonwhite rate of person offense cases was more than 4 times the white rate (Figure 23).

Thirty-nine percent of nonwhites and 33% of whites charged with a delinquency offense were securely detained in 1985 (Table 5). Nonwhites were more likely to be detained within each of the four general delinquency offense categories, with the difference being greatest when the youth was charged with a drug law violation.

Delinquency cases involving nonwhites were somewhat more likely to be waived to criminal court than were white cases (Figure 24). In 1985, 3% of all nonwhite cases formally processed for a delinquency offense were transferred to criminal court, compared to 2% of white cases. Slightly less than two-thirds of both white and nonwhite petitioned delinquency cases were adjudicated, with similar proportions being placed out of the home or on formal probation at disposition.

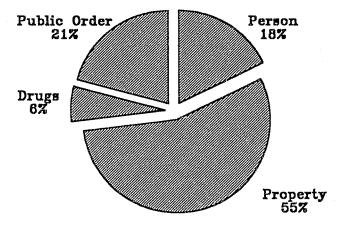

Table 1

Reasons for Referral of Delinquency Cases, 1985

Reason for Referral	Number of Cases	Percent
Index Violent	48,800	9.1
Criminal Homicide	1,100	0.2

CHAPTER 2: NATIONAL ESTIMATES OF PETITIONED STATUS OFFENSE CASES, 1985

COUNTS AND TRENDS

A status offense is an act or conduct which is an offense only when committed by a juvenile. In 1985 courts with juvenile jurisdiction petitioned and formally disposed an estimated 88,000 status offense cases (Figure 25). The courts in 1985 handled approximately equal numbers of runaway, truancy, ungovernable and status liquor law violation cases. Between 1984 and 1985 the number of status offense cases formally handled by the courts increased by 11% (Table 6). Increases were experienced in all offense categories, with the number of runaway cases increasing by 3%, truancy cases by 7%, ungovernable cases by 16%, and status liquor law violations cases by 9%.

SOURCE OF REFERRAL

Law enforcement agencies were the primary source of referral for status liquor law violation cases in 1985, while they referred no more than one-quarter of the runaway, truancy and ungovernable cases (Figure 26). Ninety-one percent of status liquor law violations were referred by law enforcement agencies, compared to 25% of runaway cases, 21% of truancy cases and 12% of ungovernable cases.

DETENTION

Youth in 18% of all formally processed status offense cases disposed in 1985 were held in a secure detention facility at some point between referral to court intake and case disposition (Figure 27). A runaway was the most likely status offender to be securely detained; secure detention was used in one-third of all runaway cases. In comparison, 2 of every 10 youth charged with ungovernability and 1 of every 10 youth charged with truancy or status liquor law violation were securely detained. Along with being the most likely to be detained, runaways also accounted for the largest group of status offenders detained in 1985. Of the 16,000 youth charged with a status offense and securely detained, 37% were charged with running away from home (Figure 28).

DISPOSITION

The youth was adjudicated a status offender by the court in 60% of the petitioned status offense cases in 1985 (Figure 29). Twenty-eight percent of all petitioned status offense cases were placed on probation and 13% were placed out of the home. In terms of adjudicated status offense cases, nearly half were placed on probation, while nearly one-quarter were placed out of the home in a residential facility. Another one-quarter of adjudicated youth were required to pay restitution or a fine or to enter a treatment or counselling program.

⁴Some courts do not provide in their automated case records sufficient detail on the nature of the status offense involved in a referral to confidently group a case into one of the four major reporting categories. For example, some systems use a general status offense category *Behavior Injurious to Self*, which includes running away, truancy and ungovernability. Some use codes which represent a combination of individual status offense categories, such as the code *Truant from Home or School*. In order to present the best description of the demographic and dispositional characteristics of individual status offense case types, ambiguous status offense cases were coded into the reporting category *Other* (which could also have been labeled *Unspecified*). Therefore, this reporting category combines those status offenses that do not belong in the four major status offense categories used in this report with some unknown number of runaway, truancy, ungovernable and status liquor law violation cases.

The profile of dispositions received by an adjudicated status offender was dependent on the nature of the alleged offense (Figure 30). Adjudication was most common in ungovernable cases and least common in runaway cases. The lower rate of adjudication in runaway cases may be because many courts return a runaway youth to his or her home jurisdiction for adjudication and disposition. In such cases the youth was not adjudicated by the original court, but released with the understanding that the case would be filed in the home jurisdiction. Out-of-home placement was most likely for youth charged with ungovernability and least common for status liquor law violations. Of those status offenders placed out of the home, 36% were charged with ungovernability, 28% with running away from home, 22% for truancy and only 6% for a status liquor law violation (Figure 31). An order of formal probation was most likely in truancy and ungovernable cases. Overall, one-third of status offenders adjudicated and placed on probation were charged with truancy and one-quarter with ungovernability (Figure 32). Finally, unlike the other status offense cases, a large percentage of adjudicated liquor law violations resulted in a fine or an order to enter a treatment or counselling program (Figure 30).

AGE AT REFERRAL

Two-thirds of all formally processed status offense cases in 1985 involved youth who were below the age of 16 at the time of referral (Figure 33). Youth below the age of 16 were involved in 75% of all runaway cases, 93% of all truancy cases and 76% of all ungovernable cases, but only 25% of all status liquor law violations. The profiles of status offenses found in cases involving youth referred before or after their sixteenth birthdays were different (Figure 34). The largest difference between the two age groups was found in their involvement in status liquor law violations. A status liquor law violation was charged in 50% of all the status offense referrals involving youth sixteen years of age or older and in only 8% of the cases involving younger youth. For the younger youth truancy was the most common status offense, while it was the least common for the older youth.

Status offense case rates peaked at age 15 and decreased marginally in the older age groups (Figure 35). But, among the individual offense categories, the patterns were very different (Figure 36). Runaway, truancy and ungovernable case rates all peaked at age 15 and decreased substantially by age 17. In contrast, status liquor law violation case rates increased continuously with age. In fact, while the rates of running away, truancy and ungovernable cases decreased an average of 76% between age 15 and age 17, status liquor law violation rates increased by 334%.

Overall, the use of secure detention in formally processed status offense cases showed no consistent pattern of change across age groups (Table 7). This was also true within the individual status offense categories.

The dispositional profiles of status offenders age 15 or younger and those age 16 or older were very different, reflecting to a great extent the substantial involvement of the older youth in status liquor law offenses (Figure 37). While the probability of adjudication was comparable for both age groups, the probability that the youth would be placed out of the home was far greater for the younger group. Compared to the older group, a larger proportion of the younger youth were placed on formal probation. In contrast, substantially more of the older group were ordered to pay fines or to enter a treatment or counselling program, clearly related to their high involvement in status liquor offenses.

SEX

Between 1984 and 1985 the number of petitioned male status offense cases increased by more than 12%, while female cases increased by 9% (Table 6). In 1985, males were involved in 57%

of all petitioned and formally processed status offense cases (Figure 38). There were, however, wide variations within the individual offense categories. Males were involved in 74% of status liquor law violation cases, 55% of truancy and 51% of ungovernable cases. On the other hand, 63% of the runaways formally processed by the juvenile courts in 1985 were female. The offense profiles of male and female status offense cases reflect the high male involvement in liquor law violations and the high female involvement in runaway cases (Figure 39). Runaway cases accounted for 29% of all female status offense cases, compared to only 13% of male cases. In contrast, a liquor law violation was charged in 29% of male status offense cases, compared to only 14% of female cases.

Status offense case rates for males increased almost continuously with age, with only a slight decline between ages 15 and 16 (Figure 40). Female rates, however, peaked at age 15 and declined substantially thereafter. These apparently different patterns of male and female status offense case rates were not found, however, within the individual offense categories (Figure 41). For both males and females, runaway, truancy and ungovernable case rates peaked at age 15 and declined markedly in the older age groups. Similarly, for both male and females, the case rates within the status liquor category increased dramatically with age, especially in the older age groups. Within the status liquor category, the male 17-year-old rate was 5 times the rate for 15-year-olds, while the female difference was nearly a factor of 3. In other words, the variation between the overall status offense case rate distributions for males and females reflects more their uneven involvement in the various individual offense categories than a difference in the age-related pattern of status offense referrals.

Females charged with a status offense were detained slightly more often than males (Table 8). But, once again, this reflects their differential involvement in the various offense categories. Within each of the individual offense categories, males and females were detained at a similar rate. For both sexes, one-third of runaway, one-fifth of ungovernable and one-tenth of status liquor and truancy cases were detained. The greater detention of female status offenders, overall, is the result of their greater involvement in runaway cases which were detained at a high rate.

Male and female status offense cases were equally likely to be adjudicated once petitioned (Figure 42). Female status offense cases were somewhat more likely to be placed out of the home or on probation at disposition; males were less likely to receive these more severe dispositions because of their greater involvement in status liquor law violations which tended to receive the less severe dispositions.

RACE

Between 1984 and 1985 the number of petitioned status offense cases involving nonwhite youth increased by nearly 8%, while white cases increased by more than 11% (Table 6). Whites were involved in 83% of all formally processed status offense cases in 1985 (Figure 43). White youth were involved in 80% of all runaway, 79% of all truancy, 78% of all ungovernable and 95% of status liquor law violations. This disproportional involvement of white youth in status liquor law violation cases is reflected in the offense profiles of white and nonwhite cases (Figure 44). Compared to white cases, nonwhite status offense caseloads were comprised of greater proportions of runaway, truancy and ungovernable cases primarily because of their extremely low proportion of status liquor law violations.

The status offense case rate for whites was greater than the nonwhite rate, 3.4 compared to 2.8 cases per 1,000 youth at risk (Table 6). However, the nonwhite rates were greater than white

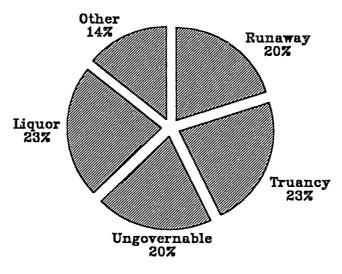

⁵Eighty-one percent of the nation's youth population in 1985 was classified as white by the U.S. Bureau of the Census. In both the population and court data, nearly all Hispanics were included in the white racial category.

rates in the younger age groups (Figure 45). For nonwhites the overall status offense case rates peaked at age 15 and dropped substantially thereafter. The white rates also peaked at age 15, but there was relatively little decline in the older age groups. The characteristics of these overall case rate distributions can be more easily understood by examining the individual offense distributions (Figure 46). Within the runaway, truancy and ungovernable caseloads, both white and nonwhite rates peaked at age 15 and dropped substantially thereafter, with the nonwhite rates generally higher across the age range. For both whites and nonwhites the rate of status liquor law violation cases increased continuously with age, but unlike the other offense distributions the white rate was substantially greater at each age. For example, the white rate for 17-year-olds was nearly 5 times greater than the nonwhite rate. Therefore, the sharp decline in the overall case rates for nonwhites and the leveling of the white rates can be attributed to the differential involvement of whites and nonwhites in the courts' status liquor law violation caseload.

Twenty-one percent of nonwhites and 17% of whites charged with a status offense were securely detained in 1985 (Table 9). Nonwhites were more likely than whites to be detained when charged with running away or status liquor law violations.

White and nonwhite youth charged with a status offense were equally likely to be adjudicated and, once adjudicated, to be placed out of the home (Figure 47). However, a far greater proportion of nonwhite youth were placed on probation following adjudication. Once again, this relates to the finding that a large proportion of white status offenders were charged with status liquor law violations which were less likely than the other status offenses to be placed on probation and more likely to be fined or referred to a counselling or treatment program.

CHAPTER 3: DATA BRIEFS

National estimates, such as those presented in the previous chapters, often lack the detail needed to address specific issues because they are, of necessity, based on the largest possible number of jurisdictions. When analyzing available data it is generally true that as the sample size increases, detail decreases. However, analyses of the archived data can test many of assumptions about the activities and procedures of juvenile courts and the youth who come before them. By carefully selecting jurisdictions with compatible data that address a specific issue, detailed findings beyond those possible from national estimates can be developed.

This chapter presents the results of sample-specific analyses of the 1984 and 1985 juvenile court data files. Each table in this chapter is supported by a large data set and each table identifies the jurisdictions included in the supporting data set. The percentage of the U.S. population at risk contained in each sample is included as an aid to the reader. Throughout this chapter the reader must always keep in mind that the findings are direct reflections of the activities of the courts in each sample and are not national estimates.

In the style of a reference document *Table Notes* are included to facilitate the reader's interpretation of the analyses. They are not presented as complete summaries of the information stored in the tables. Analyses are presented in the general offense categories used throughout the first two chapters (delinquency offenses: crimes against persons, crimes against property, drug law violations, and offenses against the public order; and status offenses: runaway, liquor law violations, truancy, ungovernable, and other status offenses) and/or the offense categories used in the FBI Uniform Crime Reports (index violent crimes: murder, forcible rape, robbery, aggravated assault; and index property crimes: burglary, larceny-theft, motor vehicle theft, and arson). This dual presentation demonstrates the flexibility of the juvenile court data sets. As reference material, each table can be studied independently. However, by reviewing information from several tables based on common data sets, the reader can investigate additional questions and issues. Comparisons across tables based on different data sets should be made with caution. Complete definitions of category labels can be found in the Glossary of Terms (Appendix B). Table detail may not add to totals because of rounding or interpolation techniques.

The Data Brief tables are organized into four groups. The first group (Tables 10-20) consists of percent distribution tables presenting demographic and case processing information. The second set of tables (Tables 21-29) presents case rates as well as detention and disposition rates. The third group of tables (Tables 30-42) displays 1984-1985 trend data for consistently reporting jurisdictions detailed by offense, case and demographic characteristics. The last set of tables (Tables 43-59) presents case rate and disposition data for selected offenses.

TREND TABLES

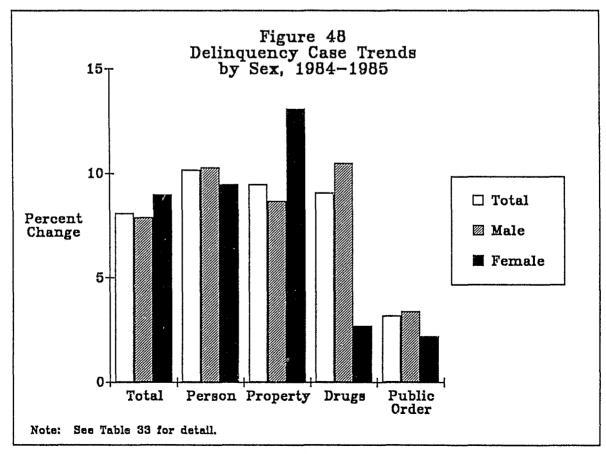

The trend tables are new to the Data Briefs. While these tables may look ominous they are perhaps the easiest Data Brief tables to understand. (For this reason there are no accompanying *Table Notes.*) To demonstrate the type of information contained in these tables a few findings are presented below. Given the current interest in drug involvement among juveniles, various trends in drug law violation cases have been pulled together to show how this information can be assembled to provide a detailed picture of court processing trends. Once again, the reader is cautioned that all findings reported below and throughout this chapter reflect only the activities of the courts in the sample used to generate the corresponding table.

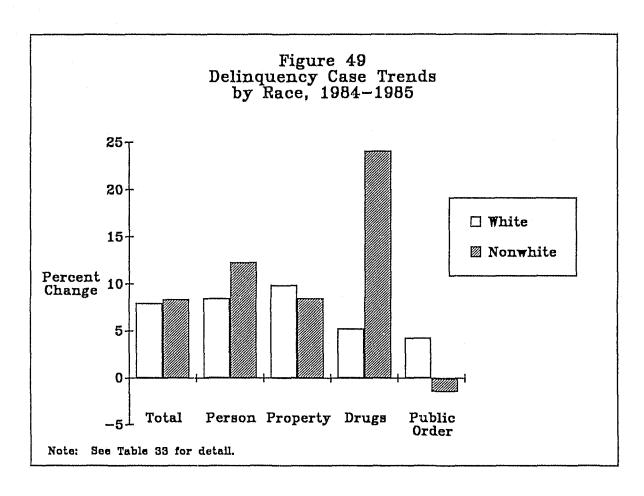

- Among juvenile courts in the sample, the number of petitioned and nonpetitioned delinquency cases handled in 1985 was 8.1% higher than the number processed in 1984 (Table 33). Crimes against persons had the largest increase (10.2%) among delinquency offenses. The smallest increase was among public order offenses (3.2%).
- From 1984 to 1985 these courts experienced a 10.9% increase in the number of males referred to juvenile court for the violent offenses of murder, forcible rape, robbery, and aggravated assault, while the number of female violent offense cases increased by 15.1% (Table 30).
- Between 1984 and 1985 the number of burglary cases involving white males increased 4.9% compared to a 1.3% decline for nonwhite males. For females the number of burglary cases involving whites increased 10.2% compared to a 4.4% decline for nonwhites.
- Between 1984 and 1985 the number of aggravated assault and motor vehicle theft cases showed the most marked increases for both males and females, with the increases being more than 16%. The increase in motor vehicle theft cases was substantially higher among nonwhites of both sexes (about 33%) than among whites (about 13%).
- In the sample, the number of petitioned and nonpetitioned status offense cases rose 10.4% from 1984 to 1985 (Table 34). The number of runaway cases increased by 13.4%.
- Between 1984 and 1985 the number of status liquor law violation cases involving whites increased by 8.0%, while nonwhite caseloads declined by 11.2%.
- In the sample, the number of securely detained status offense cases increased 25.5% between 1984 and 1985 (Table 42). The increase in the use of detention was greater for runaway cases (33.6%) than for other types of status offense cases. Liquor law violation cases showed the smallest increase in the number of cases detained (2.0%).

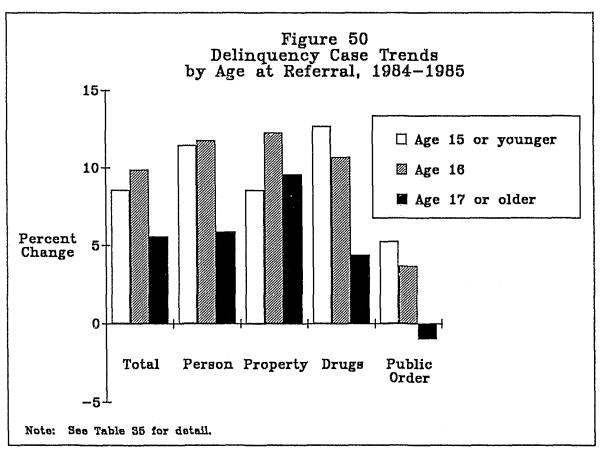

A Look at Trends for Drug Law Violation Cases

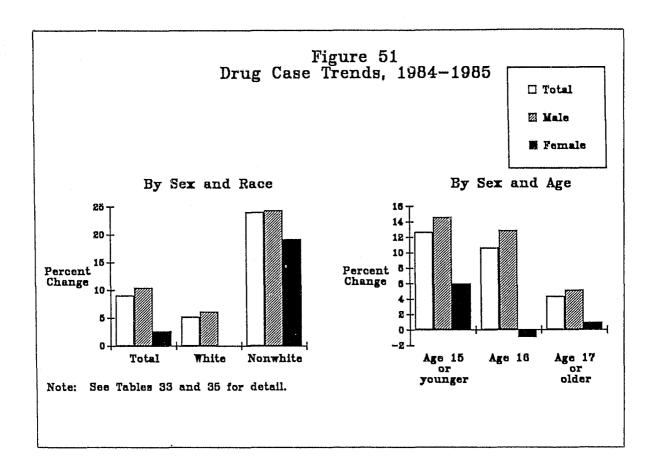

- From 1984 to 1985 the number of petitioned and nonpetitioned drug law violation cases handled by juvenile courts in the sample rose by 9.1% (Figure 48). In the same time period these courts experienced somewhat greater increases in the numbers of person and property offense cases (10.2% and 9.5% respectively).
- The increase in drug law violation cases was greater among males (10.5%) than among females (2.7%).
- Among nonwhites the increase in drug law violation cases was more than four times the corresponding increase among whites (Figure 49).
- The number of drug law violation cases increased more for younger than older youth (Figure 50). Among youth age 15 or younger there was a 12.7% increase in drug cases; the increase in drug cases for youth age 17 or older was 4.4%.
- The increase in drug law violation cases among nonwhite males was 24.4% compared to 6.2% for white males (Figure 51). The pattern was similar for females; there was a 19.2% increase in the number of drug law violation cases involving nonwhite females and no change in the number of such cases involving white females.

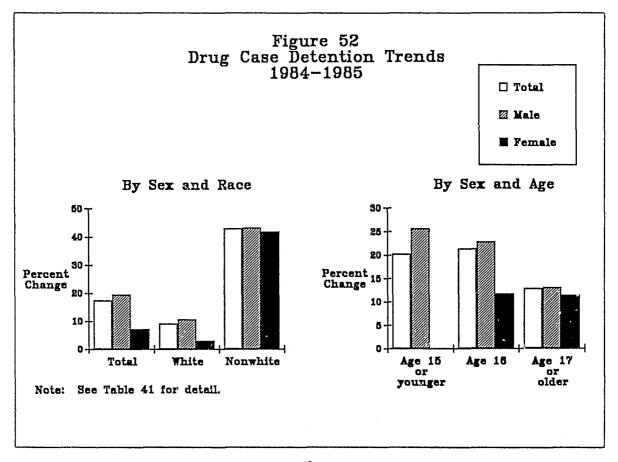

- While the number of drug law violation cases handled by the juvenile courts increased in the sample by 9.1%, courts which reported detention information indicated that the number of drug cases which were securely detained prior to disposition rose 17.5% (Figure 52). Drug law violation cases had a larger increase in the number of cases detained than any other offense category. In comparison, the number of detained cases involving crimes against persons increased 6.8% (Table 41). Overall, the number of delinquency cases securely detained increased 5.9% from 1984 to 1985.
- In the sample the increase in the number of securely detained drug law violation cases was significantly greater among nonwhites (43.1%) than among whites (9.3%). For both groups the increase in the number of detained drug cases was nearly double the increase in the number of drug cases handled by the juvenile courts.
- While the number of drug law violation cases handled informally by juvenile courts in the sample between 1984 and 1985 increased by 5.4%, there was a 13.3% increase in the number of drug law violation cases which were handled formally through the filing of a petition and a hearing before a judge (Table 37). The increase in the number of formal drug cases was significantly greater for males (15.7%) than for females (0.7%).

 $\label{eq:Table 10}$ What were the delinquency offense patterns for different age/sex groups?

Data Sources: AL, AZ, CA, FL, HI, IA, MD, MS, NE, NJ, ND, OH, PA, SD, TN, UT, VA (36.9% of the U.S. youth population at risk)

- Drug law violations accounted for 1% of the cases involving juveniles age 12 or younger, but 12% of the cases involving juveniles age 17 or older.
- Property offenses accounted for the largest proportion of cases for all age groups.
- Among females 24% of cases were referred to juvenile court for public order offenses, for males the figure was 21%.
- Cases involving females age 17 or older were somewhat less likely than cases involving males of the same age to have been referred for a person offense.

Data Sources: AL, AZ, CA, FL, HI, MD, MS, NE, ND, OH, SD, TN, UT, VA (27.7% of the U.S. youth population at risk)

- Runaway, liquor law violation and ungovernable cases each accounted for about one-quarter of status offense cases.
- Among status offenses involving juveniles age 12 or younger, 42% were ungovernable cases.
- The proportion of status offense cases which involved liquor law violations was greater for older than younger juveniles.
- Among females, more than 1 in 3 status offense cases involved running away; among males, about 1 in 6 status offense cases involved running away.

⁻⁻ Less than 0.5%

Data Sources: AL, AZ, CA, HI, MD, MS, OH, PA, UT, VA

(26.4% of the U.S. youth population at risk)

- The largest proportion of index offense cases transferred to criminal court involved burglary (19%).
- Among the cases transferred to criminal court involving males, 19% were burglary cases; for females 3% were burglary cases.
- Five percent of the male and female cases transferred to criminal court involved a charge of murder.
- Among the cases waived to criminal court, youth below the age of 17 were most likely charged with robbery, while burglary was the most likely offense for youth age 17 or older.

Data Sources: AL, AZ, CA, FL, HI, IA, MD, MS, NE, NJ, ND, OH, PA, SD, TN, UT, VA (36.9% of the U.S. youth population at risk)

- Person offense cases were more likely than other cases to be handled formally through the filing of a petition and a hearing before a judge.
- Males cases were more likely to be petitioned than female cases in all offense categories.
- Cases involving blacks were more likely to be petitioned than cases involving whites or other races across all offense categories.
- For all offense categories, cases involving older youth were more likely to be petitioned than cases involving younger youth.

(27.7% of the U.S. youth population at risk)

- Runaway cases were less likely than other status offense cases to be handled formally through the filing of a petition and a hearing before a judge.
- Whites were least likely to have their liquor law violation cases petitioned, but were most likely to have their ungovernability cases petitioned.
- Male ungovernable cases were less likely to be petitioned than their female counterparts.

^{*} Counties with 99,600 or more youth ages 10-17 were classified as "large" counties. Counties with 36,800 to 99,599 youth ages 10-17 were classified as "medium" counties. Counties with fewer than 36,800 youth ages 10-17 were classified as "small" counties.

Data Sources: AL, AZ, CA, HI, IA, MD, MS, NE, NJ, ND, OH, PA, SD, TN, UT, VA

(32.5% of the U.S. youth population at risk)

- For every 1,000 juveniles ages 10-17 in the population, 45 delinquency cases were referred to juvenile court.
- Across all county sizes nonwhite males had the highest delinquency case rates, followed by white males, nonwhite females and white females, in that order.
- Males case rates were more than 4 times greater than the female case rates in all county sizes.
- The delinquency case rates for males, both white and nonwhite, were higher in medium counties than in large or small counties. The same was true for females.

^{*} Counties with 99,600 or more youth ages 10-17 were classified as "large" counties. Counties with 36,800 to 99,599 youth ages 10-17 were classified as "medium" counties. Counties with fewer than 36,800 youth ages 10-17 were classified as "small" counties.

Data Sources: AL, AZ, CA, HI, MD, MS, NE, ND, OH, SD, TN, UT, VA

(23.3% of the U.S. youth population at risk)

- For every 1,000 juveniles ages 10-17 in the population, nearly 11 status offense cases were referred to juvenile court.
- The status offense case rate for males in large counties was less than half the rate for their counterparts in medium or small counties. The status offense case rates for females showed a similar pattern.
- The status offense case rate was higher for white males than for nonwhite males regardless of county size. Among females, whites had higher status offense case rates than nonwhites, except in large counties.

Data Sources: AL, AZ, CA, MS, ,NE, ND, OH, SD, TN, VA

(20.0% of the U.S. youth population at risk)

- Overall, 12.95 delinquency cases and 0.89 status offense cases were detained for every 1,000 juveniles ages 10-17 in the population.
- The detention rate for whites charged with delinquency offenses was highest in medium counties, for nonwhites the rate was highest in large counties.
- The detention rate for delinquency offenses was more than 16 times the rate for status offenses.
- Among status offense cases, the detention rate was highest for runaways.

^{**} Counties with 99,600 or more youth ages 10-17 were classified as "large" counties. Counties with 36,800 to 99,599 youth ages 10-17 were classified as "medium" counties. Counties with fewer than 36,800 youth ages 10-17 were classified as "small" counties.

Data Sources: AL, AZ, CA, HI, IA, MD, MS, NE, NJ, ND, OH, PA, SD, TN, UT, VA (32.5% of the U.S. youth population at risk)

- The rate of release was higher for nonwhite males than white males in all county sizes, for both petitioned and nonpetitioned delinquency cases.
- Regardless of county size, the formal placement rate was higher for nonwhite males than for white males.
- Both formal placement and formal probation rates were greater in large counties than in medium or small counties, for both white males and nonwhite males.

^{**} Counties with 99,600 or more youth ages 10-17 were classified as "large" counties. Counties with 36,800 to 99,599 youth ages 10-17 were classified as "medium" counties. Counties with fewer than 36,800 youth ages 10-17 were classified as "small" counties.

APPENDIX A

PROCEDURES FOR THE DEVELOPMENT OF NATIONAL ESTIMATES OF PETITIONED DELINQUENCY AND STATUS OFFENSE CASES

PROCEDURES FOR THE DEVELOPMENT OF NATIONAL ESTIMATES OF PETITIONED DELINQUENCY AND STATUS OFFENSE CASES

This section describes the data and the statistical procedures employed to develop national estimates of the number and characteristics of petitioned delinquency and status offense cases disposed by juvenile courts in 1985.¹

DATA

The Juvenile Court Statistics series utilizes data provided to the National Juvenile Court Data Archive by state and county agencies responsible for the collection and/or dissemination of information on the processing of youth through the juvenile courts. These data are not the result of a census or scientifically designed (probability) sampling procedure. They are also not the result of a uniform data collection effort. The national estimates were developed by using data from all courts who were willing and able to provide data for this work.

The data used in this report fall into one of two general categories: case-level data and court-level aggregate statistics. Case-level data are generated by courts with automated client tracking/management information systems or automated reporting systems. These data describe in detail the characteristics of each delinquency and status offense case handled by the court and usually contain information on the age, sex and race of the youth referred, the date and source of referral, the offense(s) charged, whether or not the youth was detained, whether or not the case was petitioned, the date of disposition, and the disposition of the case. The court-level aggregate statistics were either abstracted from annual reports or supplied on request by local and state agencies. These figures report the total number of petitioned delinquency and status offense cases handled by a court in a defined time period (e.g., calendar year, fiscal year).

Two data bases containing information on juvenile court activity were constructed. The structure of each court's case-level data set (e.g., the definition of data elements, their codes, and interrelationships) was unique, having been designed to meet the informational needs and demands of the state or local jurisdiction. These disparate case-level data sets were combined by converting (recoding) each into a common (national) data format, a process which required an intimate understanding of the development, structure, and content of each data set. The combination of these standardized data sets formed the national case-level data base.

Case-level data from each jurisdiction were also summarized to produce court-level aggregate statistics for these jurisdictions. These aggregate statistics were combined with those from the courts which only contributed court-level aggregate statistics to form the national court-level data base.

In all, juvenile courts with jurisdiction over 96% of the U.S. youth population contributed either case-level data or court-level aggregate statistics on their delinquency and status offense cases. However, not all of this juvenile court information was used to generate the national estimates. Each data set contributed to the archive was studied to determine its structural characteristics (e.g., unit of count and coding rules) and its consistency with data previously supplied by the same source. To be used in this report the data had to be compatible with the report's unit of count, a case disposed, the data source had to report consistently for at least a two year period and had to represent the complete reporting of all delinquency or status offense cases formally disposed by the court in 1985.

¹For a more complete discussion of the estimation procedures, interested readers are directed to the forthcoming *Technical Appendix* to this report.

Case-level data describing in detail 295,925 delinquency cases handled formally by 1,133 jurisdictions in 22 states (Alabama, Arizona, California, Connecticut, Florida, Hawaii, Iowa, Maryland, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, New York, North Dakota, Ohio, Pennsylvania, South Dakota, Tennessee, Utah, Virginia, and Wisconsin) met the estimation criteria (Table A-1). In 1985 these courts had jurisdiction over 49% of the nation's youth population at risk. An additional 345 jurisdictions in these and 7 other states (District of Columbia, Georgia, Idaho, Illinois, New Mexico, Texas, and Vermont) reported compatible court-level aggregate statistics on an additional 36,010 formally processed delinquency cases. In 1985 these courts had jurisdiction over 10% of the nation's youth population at risk. In all, case-level data and court-level statistics on petitioned delinquency cases which were compatible with the reporting requirements of this series were available from 1,478 jurisdictions containing 59% of the nation's youth population at risk.

Table A-1 1985 County Cluster Profiles: Delinquency Data									
County Cluster	County Population Age 10-17	Counties in Cluster		ounties Reber of Cou Court- Level		ompatible Data Percent of Youth Population at Risk

Case-level data describing in detail 41,677 status offense cases handled formally by 1,114 jurisdictions in 21 states (Alabama, Arizona, California, Connecticut, Florida, Hawaii, Iowa, Maryland, Minnesota, Mississippi, Missouri, Nebraska, New York, North Dakota, Ohio, Pennsylvania, South Dakota, Tennessee, Utah, Virginia, and Wisconsin) met the estimation criteria (Table A-2). In 1985 these courts had jurisdiction over 46% of the nation's youth population at risk. An additional 345 jurisdictions in these and 7 other states (District of Columbia, Georgia, Idaho, Illinois, New Mexico, Texas, and Vermont) reported compatible court-level aggregate statistics on an additional 5,456 petitioned status offense cases. In 1985 these courts had jurisdiction over 10% of the nation's youth population at risk. In all, case-level data and court-level statistics on petitioned status offense cases which were compatible with the reporting requirements of this series were available from 1,459 jurisdictions containing 56% of the nation's youth population at risk.

YOUTH POPULATION AT RISK

The number and type of juvenile court cases in a county is highly related to the size and demographic composition of the youth population in the county that is potentially under the jurisdiction of the juvenile court. Consequently, a critical element in the development of the national

Table A-2

estimates was the construction of a measure of a county's youth population at risk for juvenile court referral.

Every state in the nation defines an upper age limit of original juvenile court delinquency jurisdiction.² While there are numerous exceptions to this age criterion (e.g., youthful offender legislation, concurrent jurisdiction statutes, and extended jurisdiction provisions), it was decided that the upper age of original juvenile court jurisdiction would be the best upper age limit for the youth population at risk measure. A survey of the case-level data showed that very few delinquency or status offense cases involved youth below the age of 10. Therefore, the lower age limit of youth population at risk measure was set at 10 years of age. Consequently, in a New York county where the upper age of juvenile court jurisdiction was 15, the youth population at risk equaled the number of youth 10 through 15 years of age residing in that county; in California where the upper age of juvenile court jurisdiction was 17, the youth population at risk equaled the number of youth 10 through 17 years of age. In summary, the youth population at risk in a county was operationally defined as the number of youth age 10 through the upper age of original juvenile court jurisdiction. While a juvenile court is likely to handle a few cases involving youth who are above or below the age limits of their youth population at risk, it was decided that the youth population at risk was the best indicator of that segment of the total population that generates juvenile court activity. The decision to exclude these youth from the population at risk calculations enabled the case rate statistic (which is an integral part of the national estimation procedure) to be more sensitive to variations across jurisdictions.

Data from the U.S. Bureau of the Census were used to develop youth population at risk figures for each county in the country. The U.S. Bureau of the Census reported county-level age group estimates in five-year groupings for July 1, 1985 on a machine-readable data file entitled County Population Estimates (Experimental) by Age, Sex, and Race: 1980-1982-1984-1985 and the

²In 1985 the upper age of court jurisdiction in three states (Connecticut, New York and North Carolina) was 15. In eight states (Georgia, Illinois, Louisiana, Massachusetts, Michigan, Missouri, South Carolina and Texas) the upper age of jurisdiction was 16. In one state (Wyoming) the upper age of jurisdiction was 18. In all other states the upper age of juvenile court jurisdiction was 17.

national individual age by race group estimates for July 1, 1985 in Current Population Reports, Population Estimates and Projections, Series P-25, No. 1022: United States Population Estimates by Age, Sex, and Race: 1980 to 1987. Using these data sets, estimates of the 1985 county-level youth population at risk figures for whites and nonwhites ages 10 through 15, 16 and 17 were generated as follows. The 1985 county-level age group estimates (0-4, 5-9, 10-14, and 15-19) for whites and nonwhites were divided into individual age group estimates by assuming that the proportions at each individual age group within the county were equivalent to the national proportions reported in the P-25 series for 1985. Individual age group population estimates for each county and the upper age of original juvenile court jurisdiction for each state were used to develop youth population at risk estimates for each county nationwide.

THE ESTIMATION PROCEDURE

National estimates of the number and the characteristics of petitioned delinquency and status offense cases disposed by juvenile courts in 1985 were developed using the national case-level data base, the national court-level data base and county-level youth population at risk figures. The basic assumption underlying each stage of the estimation procedure was that the dynamics which produce the volume and characteristics of juvenile court cases in reporting counties were shared by nonreporting counties of similar size. County was selected as the unit of aggregation because most juvenile court jurisdictions were concurrent with county boundaries, most juvenile court data report the county in which the case was handled, and because youth population estimates developed by the U.S. Bureau of Census were reported by county.³

Each county in the country was placed in one of four clusters based on the estimated number of 10- through 17-year-olds residing in the county. The population boundaries of the four county clusters were established so that each cluster contained approximately one-quarter of the nation's 10-through 17-year-old population. The numbers of white and nonwhite youth at risk ages 10 through 15, 16 and 17 were developed for each county cluster, establishing six race/age population at risk groups within each county cluster. These population at risk groups incorporated the variations in the upper ages of original juvenile court jurisdiction.

The estimation procedure developed independent estimates of the number of petitioned delinquency and status offense cases handled by the courts in each cluster. While most information systems reported data on each delinquency and status offense case disposed by their juvenile court system, one state (New Jersey) reported case-level information on only their delinquency cases. Therefore, to take advantage of all available data, estimating samples for delinquency and status offense cases were constructed separately. The stages of the estimation procedure are outlined in Tables A-3 through A-8. Since identical procedures were used to develop national petitioned delinquency and status offense estimates, only the delinquency procedures will be discussed in detail.

³Florida's juvenile court data was the only information used in this report which could not be aggregated by county. These data were collected by the Florida Department of Health and Rehabilitative Services (HRS) which identified the HRS district in which the case was handled. Florida's juvenile courts (which were not county based, but organized into 20 multi-county district courts) did not collect case-level information. In order to utilize the quality data collected by HRS, the aggregation criterion was relaxed to include the 11 HRS districts. In 1985 there were 3,137 counties in the United States. By replacing Florida's 67 counties with the 11 HRS districts, the total number of aggregation units, or counties, for this report became 3,081. Therefore, while the report uses the term county to describe the aggregation unit, the reader should be aware of the complications introduced by the use of Florida's HRS data.

Within each county cluster, jurisdictions reporting petitioned delinquency data consistent with this series' reporting requirements were identified in the national case-level data base. From the population at risk data, the numbers of white and nonwhite youth ages 10 through 15, 16 and 17 were compiled for these jurisdictions. The national case-level data base was summarized to determine the number of petitioned delinquency cases within each county cluster that involved youth in each of the six race/age population groups. For example, a total of 1,503,000 white youth ages 10 through 15 lived in the counties in Cluster 1 reporting compatible data, and generated a total of 14,899 petitioned delinquency cases (Table A-3). From these data case rates were developed for each of the six race/age groups within each county cluster. For example, in Cluster 1 the number of cases per 1,000 white youth ages 10 through 15 in the population was 9.9 [i.e., (14,899/1,503,000) x 1,000].

Next, the information contained in the national court-level data base was added and the case rates adjusted (Table A-4). Each single court-level statistic was disaggregated into six race/age group counts. This was accomplished by assuming that, for each jurisdiction's county cluster, the relationships among the six race/age case rates (developed using the case-level data) were paralleled in the aggregate statistic. For example, to disaggregate the single court-level statistic from a county in Cluster 2 with an upper age of jurisdiction of 15, the Cluster 2 white and nonwhite case rates for 10through 15-year-olds (11.5 and 31.6 from Table A-3) were applied to the population at risk figures for that county. If this county reported that it handled 300 petitioned delinquency cases and had a youth population at risk containing 12,000 white youth ages 10 through 15 and 6,000 nonwhite youth in the same age group, one would estimate that there were 138 cases (42%) involving white youth ages 10 through 15 and 189.6 cases (58%) involving nonwhite youth in the same age group [i.e., (11.5 x 12,000)/1,000 = 138 and (31.6 x 6,000)/1,000 = 189.6]. By applying these percentages to the reported aggregate statistic of 300 cases, it would be estimated that this jurisdiction handled 126 white youth and 174 nonwhite youth age 15 or younger in 1985. In this way, case counts for the six race/age groups were developed from the aggregate case counts from each jurisdiction reporting only aggregate court-level statistics.

These disaggregated counts were added to those developed from the case-level data to produce an estimate of the number of petitioned delinquency cases handled involving each of the six race/age groups in each of the four county clusters by all jurisdictions reporting compatible data. The population at risk figures for the entire sample were also compiled. Together, the case counts and the population at risk figures generated a set of overall sample case rates for each of the six race/age groups within each of the four county clusters.

National estimates of the number of petitioned delinquency cases involving each race/age group within each cluster were then calculated by multiplying each of the sample's six race/age group case rates (from Table A-4) within each county cluster by the corresponding youth population at risk for all (reporting and nonreporting) counties in the cluster (Table A-5).

With national estimates of the total number of cases processed involving each race/age group in each county cluster, the next step was to generate estimates of their case characteristics. This was accomplished by weighting the individual case-level records found in the national case-level data base. For example, it was estimated that courts in County Cluster 4 processed a total of 20,200 petitioned delinquency cases involving white youth age 16 (Table A-5). The national case-level data base contained a total of 13,729 case records from counties in Cluster 4 involving white youth age 16 (Table A-3). Consequently, each of these case records was weighted by a factor of 1.47 (i.e., 20,200/13,729) for all national estimate analyses.

National estimates of each case characteristic could not be based on all case records in the sample. Some data sets did not record the information needed to produce a complete standardized record in the national reporting format. Table A-9 indicates the standardized data that were available from each jurisdiction's data set and, therefore, the sample upon which the various case characteristic estimates were based. When analyses involved missing data within the sample, national estimates were constructed by, once again, assuming that missing data were similar in structure to that of the nonmissing data. Consequently, missing data were spread over the cells in the crosstabulation tables in direct proportion to cell percentages of the corresponding row or column within which the missing data case fell. For example, if adjudication information was missing for cases from one jurisdiction involving 16-year-old males petitioned to court for property offenses, then the proportion of these cases that were adjudicated was estimated to be the same as the adjudication profile of cases with similar age/sex/offense characteristics.

VALIDITY OF NATIONAL ESTIMATES

The national estimates found in this report will always be open to criticism because they were not generated by a probability sample. However, the accuracy of such estimates can be tested by comparing them to those from other independent sources. The FBI's *Crime in the United States 1985* and this report both provide a measure of the number of cases referred to juvenile courts by law enforcement agencies. However, the two reports look at this aspect of juvenile court processing from somewhat different points of view.

The FBI data report the number of arrests that were referred to juvenile courts in 1985, while this report presents an estimate of the number of formally processed cases disposed in 1985 that were referred by law enforcement agencies. One difference is the unit of count, arrests versus referrals. A referral to juvenile court may encompass more than one arrest. Past research has shown that over 80 percent of court referrals involve only one offense and, therefore, only one arrest. In addition, it is likely that a high percentage of the multiple offense cases also were the result of a single arrest. Therefore, it is likely that only a small percentage of juvenile court cases involve more than one arrest. A second difference is the point in the processing of a case where the counting occurred: the police data focus on when the youth is referred to court, while the court data count a case when it is disposed. If it is assumed that the flow of cases remained reasonably constant over the time frame, this difference should have a minimal effect on the annual estimates. If, however, case rates varied over time, the difference between the estimates should decline as the comparison period increases. A third difference is that estimates found in this report are not estimates of all cases referred to court by law enforcement agencies, but only estimates of those cases which were formally handled. To enable the comparison of the two reporting series, a special analysis was performed on the 1985 juvenile court data to develop an estimate of the number of nonpetitioned (informally) handled cases that were referred to court by law enforcement agencies. This procedure used the same methods described in the development of the national estimates of formally processed cases and applied these methods to the set of nationally formatted nonpetitioned case records and the aggregate court-level statistics.

The 1985 estimates derived from the FBI and the court data differed by less than 3 percent. Over the four year period from 1982 through 1985 the sum of the annual estimates differed by less than one-half of one percent. Admittedly, this comparison focuses on only one aspect of the information found in this report, but the finding supports the validity of both series. In addition, the fact that this is the only point of contact between the information presented in the *Juvenile Court Statistics* series and other national reporting programs attests to the unique contribution of this work to the juvenile justice community.

APPENDIX B

GLOSSARY OF TERMS

GLOSSARY OF TERMS

ADJUDICATED: Judicially determined to be a delinquent or status offender.

CASE RATE: The number of cases disposed per 1,000 youth at risk. See Youth Population at Risk.

DELINOUENCY: Acts or conduct in violation of criminal law. See Reason for Referral.

DELINQUENCY CHILD POPULATION: The number of children from age 10 through the upper age of jurisdiction. See *Upper Age of Jurisdiction* and *Youth Population at Risk*.

DELINQUENT ACT: An act committed by a juvenile for which an adult could be prosecuted in a criminal court, but when committed by a juvenile is within the jurisdiction of the juvenile court. *Delinquent acts* include *crimes against persons*, *crimes against property*, *drug offenses*, and *crimes against public order*, as defined under *Reason for Referral*, when such acts are committed by juveniles.

DEPENDENCY CASE: Those cases covering neglect or inadequate care on the part of the parents or guardians such as lack of adequate care or support resulting from death, absence, or physical or mental incapacity of the parents; abandonment or desertion; abuse or cruel treatment; and improper or inadequate conditions in the home.

DEPENDENCY CHILD POPULATION: The number of children at or below the upper age of jurisdiction. See *Upper Age of Jurisdiction* and *Youth Population at Risk*.

DISPOSITION: Definite action taken or a treatment plan decided upon or initiated regarding a particular case. Case dispositions are coded into the following categories:

Transfer to Criminal Court/Waive - Cases which were waived or transferred to a criminal court as the result of a waiver or transfer hearing.

Release - Cases dismissed (including those warned, counselled, and released) with no further disposition anticipated.

Probation - Cases in which youth were placed on informal/voluntary or formal/court-ordered probation or supervision.

Placement - Cases in which youth were placed out of the home in a residential facility housing delinquent or status offenders or were otherwise removed from their home.

Other - A variety of miscellaneous dispositions not included above. This category includes such dispositions as fines, restitution, and community service, referrals outside the court for services with minimal or no further court involvement anticipated and those dispositions coded as *Other* in the original data.

FORMAL HANDLING: See Manner of Handling.

INFORMAL HANDLING: See Manner of Handling.

JUVENILE COURT: Any court which has jurisdiction over matters involving juveniles.

MANNER OF HANDLING: A general classification of case processing within the court system. Petitioned (formally handled) cases are those that appear on the official court calendar for adjudication by the judge or referee as a result of the filing of a petition, affidavit, or other legal instrument used to initiate court action. Nonpetitioned (informally handled) cases are those cases which duly authorized court personnel screen for adjustment prior to the filing of a formal petition or affidavit. Such personnel include judges, referees, probation officers, other officers of the court and/or an agency statutorily designated to conduct petition screening for the juvenile court. The nonpetition category includes cases which were petitioned, but the petition was dropped or withdrawn prior to scheduling a formal hearing.

PETITION: A document filed in juvenile court alleging that a juvenile is a delinquent, a status offender, or dependent and asking that the court assume jurisdiction over the juvenile or asking that an alleged delinquent be transferred to criminal court for prosecution as an adult.

RACE: The race of the youth referred as determined by the youth or by court personnel.

NOTE: Coding of race and ethnicity is based upon OMB Revised Exhibit F, Circular No. A-46, Race and Ethnic Standards for Federal Statistics and Administrative Reporting. That exhibit provides standard classifications for recordkeeping, collection, and presentation of data on race and ethnicity in Federal program administrative reporting and statistical activities. These classifications should not be interpreted as being scientific or anthropological in nature. They were developed in response to needs expressed by both the executive branch and the Congress to provide for the collection and use of compatible, nonduplicated, exchangeable racial and ethnic data by Federal agencies.

White - A person having origins in any of the original peoples of Europe, North Africa, or the Middle East. (In both the population and court data, nearly all Hispanics were included in the white racial category.)

Black - A person having origins in any of the black racial groups of Africa.

Other - A person having origins in any of the original peoples of North America, the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands.

Nonwhite - Includes black and other racial categories.

REASON FOR REFERRAL: The most serious offense for which the youth was referred to court intake. Attempts to commit an offense were included under that offense except attempted murder, which was included in the aggravated assault category.

Crimes Against Persons - This category includes *criminal homicide*, *forcible rape*, *robbery*, *aggravated assault*, *simple assault*, and *other person offenses* as defined below.

1. Criminal Homicide - Causing the death of another person without legal justification or excuse. Criminal homicide is a summary category, not a single codified offense. The term, in law, embraces all homicides where the perpetrator intentionally killed someone without legal justification, or accidentally killed someone as a consequence of reckless or grossly negligent conduct. It includes all conduct encompassed by the terms murder, nonnegligent (voluntary) manslaughter, negligent (involuntary) manslaughter, and vehicular manslaughter. The term is broader than the Index Crime category used in the FBI Uniform Crime Reports in which murder and nonnegligent manslaughter does not include negligent manslaughter or vehicular manslaughter.

- 2. Forcible Rape Sexual intercourse or attempted sexual intercourse with a female against her will by force or threat of force. The term is used in the same sense as in the UCR Crime Index. (Some states have enacted gender neutral rape or sexual assault statutes which prohibit forced sexual penetration of either sex. Data reported by such states does not distinguish between *forcible rape* of females as defined above and other sexual assaults.)
- 3. Robbery Unlawful taking or attempted taking of property that is in the immediate possession of another by force or the threat of force. The term is used in the same sense as in the UCR Crime Index and includes forcible pursesnatching.
- 4. Assault Unlawful intentional inflicting, or attempted or threatened inflicting, of injury upon the person of another.
 - a. Aggravated Assault Unlawful intentional inflicting of serious bodily injury, or unlawful threat or attempt to inflict bodily injury or death by means of a deadly or dangerous weapon with or without actual infliction of any injury. The term is used in the same sense as in the UCR Crime Index. It includes conduct included under the statutory names aggravated assault and battery, aggravated battery, assault with intent to kill, assault with intent to commit ranged or manslaughter, atrocious assault, attempted murder, felonious assault, and assault with a deadly weapon.
 - b. Simple Assault Unlawful intentional inflicting, or attempted or threatened inflicting, of less than serious bodily injury without a deadly or dangerous weapon. The term is used in the same sense as in UCR reporting. Simple assault is often not distinctly named in statutes since it consists of all assaults not explicitly named and defined as serious.
- 5. Other Offenses Against Persons This category includes kidnapping, custody interference, unlawful restraint, false imprisonment, reckless endangerment, harassment, etc., and attempts to commit any such acts.

Crimes Against Property - This category includes burglary, larceny, motor vehicle theft, arson, vandalism, stolen property offenses, trespassing, and other property offenses as defined below.

- Burglary Unlawful entry or attempted entry of any fixed structure, vehicle or vessel
 used for regular residence, industry, or business, with or without force, with intent to
 commit a felony or larceny. The term is used in the same sense as in the UCR
 Crime Index.
- 2. Larceny Unlawful taking or attempted taking of property (other than a motor vehicle) from the possession of another, by stealth, without force and without deceit, with intent to permanently deprive the owner of the property. This term is used in the same sense as in the UCR Crime Index. It includes shoplifting and pursesnatching without force.
- 3. Motor Vehicle Theft Unlawful taking, or attempted taking, of a self-propelled road vehicle owned by another, with the intent to deprive him of it permanently or temporarily. The term is used in the same sense as in the UCR Crime Index. It includes joyriding or unauthorized use of a motor vehicle as well as grand theft auto.

- 4. Arson Intentional damaging or destruction by means of fire or explosion of the property of another without his consent, or of any property with intent to defraud, or attempting the above acts.
- 5. Vandalism Destroying or damaging, or attempting to destroy or damage, the property of another without his consent, or public property, except by burning.
- 6. Stolen Property Offenses Unlawfully and knowingly receiving, buying, or possessing stolen property, or attempting any of the above. The term is used in the same sense as the UCR category stolen property; buying, receiving, possessing.
- 7. Trespassing Unlawful entry or attempted entry of the property of another with the intent to commit a misdemeanor, other than larceny, or without intent to commit a crime.
- 8. Other Property Offenses This category includes extortion and all fraud offenses, such as forgery, counterfeiting, embezzlement, check or credit card fraud, and attempts to commit any such offenses.

Drug Law Violations - Unlawful sale, purchase, distribution, manufacture, cultivation, transport, possession, or use of a controlled or prohibited substance or drug, or drug paraphernalia, or attempt to commit these acts. Sniffing of glue, paint, gasoline and other inhalants and possession of paraphernalia are also included; hence, the term is broader than the UCR category *drug abuse violations*.

Offenses Against Public Order - This category includes weapons offenses; sex offenses other than forcible rape; drunkenness; disorderly conduct; contempt, probation and parole violations; and other offenses against public order as defined below.

- 1. Weapons Offenses Unlawful sale, distribution, manufacture, alteration, transportation, possession, or use of a deadly or dangerous weapon, or accessory, or attempt to commit any of these acts. The term is used in the same sense as the UCR category weapons; carrying, possessing, etc.
- 2. Sex Offenses All offenses having a sexual element, except forcible rape. The term combines the meaning of the UCR categories prostitution and commercialized vice and sex offenses. It includes all other offenses such as statutory rape, indecent exposure, sodomy, prostitution, solicitation, pimping, child molesting, lewdness, fornication, incest, adultery, etc.
- 3. Liquor law violations, not status Being in a public place while intoxicated through consumption of alcohol, or intake of a controlled substance or drug. It includes public intoxication, drunkenness and other liquor law violations. It does not include driving under the influence. The term is used in the same sense as the UCR category of the same name. (Some states treat public drunkenness of juveniles as a status offense, rather than delinquency; hence, some of these offenses may appear under the status offense code status liquor law violations. Where a person who is publicly intoxicated performs acts which cause a disturbance, he or she may be charged with disorderly conduct.)

- 4. Disorderly Conduct Unlawful interruption of the peace, quiet, or order of a community, including offenses called *disturbing the peace*, *vagrancy*, *loitering*, *unlawful assembly*, and *riot*.
- 5. Obstruction of Justice This category includes intentionally obstructing a court (or law enforcement) in the administration of justice, acting in a way calculated to lessen the authority or dignity of the court, failing to obey the lawful order of a court, and violations of probation or parole other than technical violations which do not consist of the commission of a crime or are not prosecuted as such. It includes contempt, perjury, obstructing justice, bribing witnesses, failure to report a crime, nonviolent resisting arrest, etc.
- 6. Other Offenses Against Public Order This category includes other offenses against government administration or regulation, e.g. escape from confinement, bribery, gambling, fish and game violations, hitchhiking, health violations, false fire alarms, immigration violations, etc.

Other Delinquent Acts - This category includes those offenses which contain a combination of person, property, drug and/or public order offenses or those offense coded as *other* in the original data.

Status Offenses - Acts or conduct which are offenses only when committed or engaged in by a juvenile, and which can be adjudicated only by a juvenile court. Although state statutes defining status offenses vary (and some states may classify cases involving these offenses as dependency cases), for the purposes of this report the following types of offenses were classified by NJCDA as status offenses:

- 1. Running Away Leaving the custody and home of parents, guardians, or custodians without permission and failing to return within a reasonable length of time, in violation of a statute regulating the conduct of youth.
- 2. Truancy Violation of a compulsory school attendance law.
- 3. Ungovernability Being beyond the control of parents, guardians, or custodians, or disobedient of parental authority, referred to in various juvenile codes as *unruly*, *unmanageable*, *incorrigible*, etc.
- 4. Status Liquor Law Violations Violation of laws regulating the possession, purchase or consumption of liquor by minors. (Some states treat public drunkenness of juveniles as a status offense, rather than delinquency; hence, some of these offenses may appear under this status offense code.)
- 5. Other Status Offenses This category includes both a variety of miscellaneous status offenses not included above (e.g., curfew violation), those offenses coded as *Other* in the original data or those codes which combined individual offense categories such as *Truant from Home or School*.

Dependency Offenses - Those actions which come to the attention of a juvenile court involving neglect or inadequate care on the part of the parents or guardians, such as lack of adequate care or support resulting from death, absence, or physical or mental incapacity of the parents; abandonment or desertion; abuse or cruel treatment; and improper or inadequate conditions in the home.

In the Data Briefs chapter, offenses are also grouped into categories commonly used in the FBI Uniform Crime Reports (UCR). These groupings are:

Index Violent Offenses - The offenses of murder/nonnegligent manslaughter, forcible rape, robbery, and aggravated assault.

Index Property Offenses - The offenses of burglary, larceny-theft, motor vehicle theft, and arson.

Nonindex Delinquency Offenses - In the FBI UCR, nonindex offenses include all offenses not contained within the two Crime Index categories above. However, for this work status offenses are reported in their own category and are not included within the report's nonindex crime category.

SECURE DETENTION: This variable indicates whether a youth was placed in a restrictive facility between referral to court intake and case disposition.

SOURCE OF REFERRAL: The agency or individual filing a complaint with intake (which initiates court processing).

Law Enforcement Agency - Includes metropolitan police, state police, park police, sheriffs, constables, police assigned to the juvenile court for special duty, and all others performing a police function with the exception of probation officers and officers of the court.

Other - Includes the youth's own parents, foster parents, adoptive parents, stepparents, grandparents, aunts, uncles, other legal guardians, counselors, teachers, principals, attendance officers, social agencies, district attorneys, probation officers, victims, other private citizens and a variety of miscellaneous sources of referral, which are often only defined by the code *other* in the data.

STATUS OFFENSE: Behavior which is considered an offense only when committed by a juvenile (for example, running away from home). See *Reason for Referral*.

UNIT OF COUNT: Throughout this report the unit of count is a case disposed by a court with juvenile jurisdiction during the year 1985. Each case represents a youth referred to the juvenile court during the year for a new referral for one or more of the reasons described in the Reason for Referral variable. The term disposed means that some definite action was taken or some treatment plan was decided upon or initiated. Within this definition it is possible for a youth to be involved in more than one case within the calendar year.

UPPER AGE OF JURISDICTION: The oldest age at which a juvenile court has original jurisdiction over an individual for law-violating behavior. In 1985 in three states (Connecticut, New York, and North Carolina) the upper age of jurisdiction was 15, in eight states (Georgia, Illinois, Louisiana, Massachusetts, Michigan, Missouri, South Carolina, and Texas) the upper age of jurisdiction was 16, in Wyoming it was 18, and in the remaining 38 states and the District of Columbia the upper age of jurisdiction was 17.

YOUTH POPULATION AT RISK: For delinquency and status offense matters this is the number of children from age 10 through the upper age of jurisdiction. For dependency matters this is the number of children at or below the upper age of court jurisdiction. In all states the upper age of jurisdiction is defined by statute. In most states individuals are considered adults when they reach

their 18th birthday. Therefore, for these states, the delinquency and status offense youth population at risk would equal the number of children who are 10 through 17 years of age living within the geographical area serviced by the court. See *Upper Age of Jurisdiction*.

APPENDIX C

REPORTED CASES IN CALENDAR YEAR 1985

REPORTED CASES IN CALENDAR YEAR 1985

This appendix presents information on the courts' petitioned and nonpetitioned delinquency/status and dependency caseloads for the year. It also presents the total population of the reporting jurisdiction, its delinquency population at risk (10 through the upper age of jurisdiction) and its dependency population at risk (0 through the upper age of jurisdiction). Case rates (the number of cases per 1,000 youth at risk) are presented for both delinquency and dependency populations for the state (or jurisdiction).

The units of count for the court statistics vary across jurisdictions. While many states reported their data using case disposed as the unit of count, there were others which reported cases filed, children disposed, petitions filed, hearings, juvenile arraignments, and charges. The unit(s) of count are identified in the footnotes for each data set. The unit of count for each source should be reviewed before any attempt is made to compare statistics either across or within data sets.

The figures within a column relate only to the specific case type. However, some jurisdictions were unable to provide statistics which distinguish delinquency/status cases from dependency matters or at times even from other activities of the courts. Such information is presented in the appendix in a column labeled All Reported Cases. By its nature, this column contains a heterogeneous mixture of units of count and case types. These variations are identified in the footnotes associated with each data presentation. In addition, due to the nature of these data, case rates are not calculated for the All Reported Cases column.

It should also be noted that while the majority of the data presented in the appendix are for calendar year 1985, there are several reporting jurisdictions that were not able to aggregate data for this time frame. In those instances, the data covered fiscal year 1985. The period of coverage is indicated in the footnotes and should be considered when attempting to make comparisons between data sets.

APPENDIX FOOTNOTES

The footnotes associated with each data presentation identify (1) the source of the data, (2) the mode of transmission, and (3) the characteristics of data reported. State and local agencies responsible for the collection of their juvenile court statistics compiled the data found in this report.

Agencies transmitted these juvenile court caseload data to the National Juvenile Court Data Archive in one of three different modes. First, many jurisdictions were able to provide the project with an automated data file which contained a detailed description of each case processed by their juvenile courts. Next, some agencies completed a juvenile court statistics (JCS) survey form provided by the project which requested for each county within the jurisdiction the number of male and female delinquency/status and dependency cases disposed with and without the filing of a petition. Finally, statistics for some jurisdictions were abstracted from their annual reports. In these instances, the name of the report and the page on which the information is found are listed.

The units of count for the court statistics vary across jurisdictions. While many states reported their data using case disposed as the unit of count, there were others which reported cases filed, children disposed, petitions filed, hearings, juvenile arraignments, and charges. The unit(s) of count are identified in the footnotes for each data set. The unit of count for each source should be reviewed before any attempt is made to compare statistics either across or within data sets.

The figures within a column relate only to the specific case type. However, some jurisdictions were unable to provide statistics which distinguish delinquency/status cases from dependency matters or at times even from other activities of the courts. Such information is presented in the appendix in a column labeled All Reported Cases. By its nature, this column contains a heterogeneous mixture of units of count and case types. These variations are identified in the footnotes associated with each data presentation. In addition, due to the nature of these data, case rates are not calculated for the All Reported Cases column.

It should also be noted that while the majority of the data presented in the appendix are for calendar year 1985, there are several reporting jurisdictions that were not able to aggregate data for this time frame. In those instances, the data covered fiscal year 1985. The period of coverage is indicated in the footnotes and should be considered when attempting to make comparisons between data sets.

[1] Variations in administrative practices, differences in upper ages of jurisdiction, and wide ranges in available community resources affect the number of cases handled by individual counties and states. Therefore, the data displayed in this table should not be used to make comparisons between the delinquency/status or dependency workloads of counties or states without carefully studying the definitions of the statistics presented.

Furthermore, caution must be taken when interpreting the case rates appearing at the end of each state table. Case rate is defined as the number of juvenile court cases per 1,000 children at risk in the reporting counties. For example, Cook County, Illinois was the only county in the state reporting statistics on nonpetitioned delinquency/status cases. The nonpetitioned delinquency/status case rate (4.54 cases/1,000 youth at risk) was generated from the total number of nonpetitioned delinquency/status cases Cook County reported (2,416) and the county's delinquency child population (531,600). Therefore, the case rates appearing in the state table should not be interpreted as the state's case rate unless all counties within that state reported.

[2] Except for the states of Alaska, Connecticut, and Florida, the commonwealth of Puerto Rico and the territory of the Virgin Islands, reported data are aggregated at the county level. Counties serving total populations of 50,000 or more are listed separately. Caseload statistics for counties serving areas with total populations of less than 50,000 are combined for each state and are reported in aggregate.

[3] Alabama

Source:

Alabama Department of Youth Services

Mode:

Automated data file (delinquency/status cases) and the 1985 Statistical Report

pages 85-86 (dependency cases)

Data:

1. Delinquency/status figures are cases disposed.

2. Dependency figures are cases disposed and include special proceedings. The Department of Human Resources handles dependency cases and transmits the statistical data to the Department of Youth Services.

[4] Alaska

Source:

Alaska Court System

Mode:

1985 Annual Report, page S-46 and S-74

Data:

1. Total figures are total petition dispositions. They include delinquency, status, and dependency cases for fiscal year 1985.

2. The majority of juvenile cases are processed at the superior court level. However, the following district courts handled and reported children's matters in fiscal year 1985: Cordova, Dillingham, Glennallen, Seward, Tok, and Unalaska.

[5] Arizona

Source:

Supreme Court of Arizona

Mode:

JCS survey form

Data:

- 1. Delinquency/status figures are total petition dispositions (meaning more than one case can be disposed in one hearing, thus receiving only one disposition) and total nonpetition cases disposed. The number of total delinquency/status cases is not shown because the petition and nonpetition units of counts are not the same.
- 2. Dependency figures are total petition dispositions (meaning more than one case can be disposed in one hearing, thus receiving only one disposition). Total dependency cases are not known because nonpetition cases were not reported.

[6] Maricopa County, Arizona

Source:

Maricopa County Juvenile Court Center (delinquency/status cases) and the Supreme Court of Arizona (dependency cases)

Mode:

Automated data file (delinquency/status cases) and JCS survey form (dependency

cases)

Data:

1. Delinquency/status figures are cases disposed.

2. Dependency figures are total petition dispositions (meaning more than one case can be disposed in one hearing, thus receiving only one disposition). Total dependency cases are not known because nonpetition cases were not reported.

[7] Arkansas

Source:

Arkansas Judicial Department

Mode:

Automated data file

Data:

- Delinquency/status figures are cases disposed.
- Dependency figures are cases disposed.

[8] California

Source:

Bureau of Criminal Statistics and Special Services (delinquency/status cases) and the Administrative Office of the Courts (dependency cases)

Mode:

Automated data file (delinquency/status cases) and the Judicial Council of

California 1987 Annual Report, page 197 (dependency cases)

Data:

- Delinquency/status figures are cases disposed. There is an undercount of nonpetition delinquency/status cases in Alameda, San Diego and Santa Clara counties. These counties have an information system which does not capture the number of subsequent closed-at-intake cases of juveniles already active in the court system; the figures for the remainder of the state include these data.
- 2. Dependency figures are cases disposed for fiscal year 1985. Total dependency cases are not known because nonpetition cases were not reported.

[9] Los Angeles County, California

Source:

Superior Court, Los Angeles County (petition delinquency/status cases), the Los Angeles County Probation Department (nonpetition delinquency/status cases), and the Administrative Office of the Courts (dependency cases)

Mode:

Superior Court, Los Angeles County Juvenile Court Coordinator's Yearly Workload Report 1985 (petition delinquency/status cases); the Los Angeles County Probation Department 1985 Annual Report to Judges, page 3 (nonpetition delinquency/status cases); and the Judicial Council of California 1987 Annual Report, page 197 (dependency cases)

Data:

- 1. Delinquency/status figures are cases disposed. The number of petition cases was determined by adding the number of "Minors Found Unfit," "Preadjudication Dismissals," "Petitions Found Not True" and "Disposition Hearings" from the Juvenile Court Coordinator's Yearly Workload Report. The number of nonpetition cases was calculated using figures from the 1985 Annual Report to Judges. Figures for "Closed After Investigation," "Informal Supervision," "Abeyance" and "Other" were summed. Nine percent of the total number of petition cases were refused and were actually handled informally. This figure was added to the calculated nonpetition cases to derive the total number of nonpetition cases.
- Dependency figures are cases disposed. Total dependency cases are not known because nonpetition cases were not reported.

[10] Colorado

Source:

Colorado Judicial Department

Mode:

JCS survey form

Data:

- Delinquency/status figures are cases terminated during fiscal year 1985. Total delinquency/status cases are not known because nonpetition cases were not reported.
- Dependency figures are cases terminated during fiscal year 1985. Total dependency cases are not known because nonpetition cases were not reported.

[11] Connecticut

Source:

Chief Court Administrator's Office

Mode:

Automated data file

Data:

1. Delinquency/status figures are cases disposed.

2. Dependency figures were not reported.

3. Connecticut does not have counties, therefore the data are reported by juvenile venue districts established by the state.

[12] Delaware

Source:

Family Court of the State of Delaware

Mode:

Annual Report for Fiscal Year 1986, page 4

Data:

 Delinquency/status figures are cases filed (petitioned) and contain traffic offenses. Total delinquency/status figures are not known because nonpetitioned data were not reported.

- 2. Dependency figures were not reported.
- 3. There is no statute on status offenders in this state, therefore, no status offenses are contained in these figures.

[13] District of Columbia

Source:

District of Columbia Courts

Mode:

1985 Annual Report, pages 71 and 75

Data:

- 1. Delinquency/status figures are cases disposed. They include interstate compact figures. To arrive at the number of peitioned cases disposed, the number "not petitioned" was subtracted from total dispositions.
- 2. Dependency figures are cases disposed. The number of petitioned cases disposed was derived by subtracting "reviews" and "not petitioned" from total dispositions. (Review cases are not included in the total case count.)

[14] Florida

Source:

Department of Health and Rehabilitative Services; Children, Youth and Families Program Office

Mode:

Automated data file

Data:

- 1. Delinquency/status figures are cases disposed.
- 2. Dependency figures are cases disposed.
- 3. Status offenses are considered to be dependency cases in Florida. However, for the purposes of this data base, they are classified as delinquency/status cases.
- 4. The figures represent the number of cases closed by Intake during 1985 which captures only those disposed cases reported to the Department of Health and Rehabilitative Services by caseworkers correctly completing and submitting a "Client Information Form Dependency/Delinquency Intake." The Department of Health and Rehabilitative Services Intake Department, having a broad range of operations, reports information on other child care services not part of the typical juvenile court system. Therefore, the number of nonpetition cases may appear higher and fluctuate more than those reported by other information systems which report only juvenile court activity.
- 5. Florida reported its data by Department of Health and Rehabilitative Services (HRS) districts. Therefore, HRS districts were used as the reporting area. The following is a list of counties within HRS districts. District 1: Escambia, Okaloosa, Santa Rosa, and Walton. District 2: Bay, Calhoun, Franklin, Gadsden, Gulf, Holmes, Jackson, Jefferson, Leon, Liberty, Madison, Taylor, Wakulla, and Washington. District 3: Alachua, Bradford, Citrus, Columbia, Dixie, Gilchrist, Hamilton, Hernando, Lafayette, Lake, Levy, Marion, Putnam, Sumter, Suwannee, and Union. District 4: Baker, Clay, Duval, Flagler, Nassau, St. Johns, and Volusia. District 5: Pasco and Pinellas. District 6: Hardee, Highlands, Hillsborough, Manatee, and Polk. District 7: Brevard, Orange,

Osceola, and Seminole. District 8: Charlotte, Collier, De Soto, Glades, Hendry, Lee, and Sarasota. District 9: Indian River, Martin, Okeechobee, Palm Beach, and St. Lucie. District 10: Broward. District 11: Dade and Monroe.

[22] Iowa

Source:

Iowa Department of Human Services

Mode:

Automated data file and Juvenile Court Cases Reported by the Juvenile Probation

Officer, CY1985

Data:

Delinquency/status figures are cases disposed. The following counties' figures were taken from the annual report which includes traffic cases in the delinquency counts: Boone and Greene.

- 2. Dependency figures are cases disposed. The figures for dependency cases reflect only those reported by court officers. A larger number were handled by the Department of Human Services and are not reported here even though they typically come before the juvenile court.
- 3. Running away, truancy and ungovernable behavior are considered "status offenses." Violation of curfew, possessing or drinking liquor, hit and run, reckless driving, driving without a license, and all other traffic offenses are called "simple misdemeanors." These simple misdemeaners and status offenses are exempted from the jurisdiction of the juvenile court. Referral reasons indicate the presenting problem and are not necessarily the basis for legal action.
