INTRODUCTION

STUDY DESCRIPTION

The expenditure and employment data in this file cover reporting periods as follows:

The employment data are for October 1984 (unless otherwise indicated in Variable 13).

The Federal Government expenditure data are for Fiscal Year 1984, which began on October 1, 1983 and ended September 30, 1984.

The State expenditure data presented in this report cover the fiscal year ending June 30, 1984 for all States except four whose fiscal year ended as follows: New York, March 31, 1984; Texas, August 31, 1984; and Alabama and Michigan, September 30, 1984.

For local governments, the 1984 fiscal year reported is the one that closed between July 1, 1983 and June 30, 1984. Most municipalities and counties end their fiscal years on December 31 or June 30. The fiscal year reported for Washington, D.C. ended on September 30, 1984.

Some agencies operate on a different fiscal year basis from the rest of the parent government. In such instances, figures included are for the agency's fiscal year that ended within the parent government's regular fiscal year.

Data Collection

These data are based on a special compilation of data and sources available from the Census Bureau's annual surveys of governmental finances and employment. These surveys provide data on expenditure and employment, by function, of the Federal, State, and local governments (counties, cities, townships, school districts, and special districts). The data collection procedures for these two areas are described below.

GOVERNMENTAL FINANCES: Federal Government financial data were obtained from "actual" data in THE BUDGET OF THE UNITED STATES FOR THE FISCAL YEAR 1984. Certain adjustments were made in Federal data to arrive at Census Bureau "expenditure" amounts. State finance statistics as well as those for large counties and cities were compiled by Census Bureau representatives from official reports and records, with the advice of State and local officers and employees. The figures were classified according to standard census categories for reporting large government finances, and were reviewed intensively. The remaining data were provided either by local officials in response to a mail survey using detailed questionnaires or from central data collection arrangement with State governments. For nonrespondent governmental units and agencies, prior year data were used as they were reported.

PUBLIC EMPLOYMENT: Federal Government civilian employment data were obtained from records maintained by the U.S. Office of Personnel Management. These records did not provide the information necessary to compute full-time equivalent employment. Statistics for State and local governments were obtained by a mail survey. State government data were based on a complete canvass of all State departments, agencies, and institutions. Questionnaires for local governments were generally sent to a local central reporting office, supplemented by special mailings to dependent agencies. For nonrespondent governmental units and agencies, prior year data were used.

For the mail portion of these annual surveys, figures reported by government officials are generally accepted as being substantially correct. In some cases, varying interpretations of the instructions or deficiencies in governmental employment and fiscal records may make it difficult for officials to render complete and accurate reports for their governments. These difficulties are dealt with by (1) careful definition of terms and detailed instructions in difficult cases, (2) supplemental correspondence and telephone followup to officials, and (3) intensive examination of data collected, that is, verification of internal consistency and comparison with previous reports and other sources of data. Errors that may be introduced during processing (input preparation, etc.) are minimized through the use of intensive computer editing of the data at various stages of the processing system.

In addition to these edit procedures, the data extracted from the regular programs for this report received additional examination. The local government expenditure and employment estimates were reviewed, potential problems investigated, and data revised, where necessary. Data for each of the States and large counties and cities displayed individually were scrutinized and compared to the prior CJEE data. Where possible, data were adjusted to correct errors, reclassify activities, and narrow differences with the former CJEE survey series. Specific procedures included referring to alternate sources, estimating missing data, and refining data through proration (e.g., sheriff offices).

SAMPLE METHODOLOGY

Data for 1984 and later years are based on a new sample drawn from the 1982 Census of Governments. Local government data are estimated from a sample of approximately 22,000 local units chosen from the universe of local governments identified in the 1982 Census and modified by the addition or deletion of local governments which came into or went out of existence since 1982.

Using 1980 population as a base, the sample includes all county governments having 50,000 or more population, all municipalities (and townships in New England and the Middle Atlantic States) having 25,000 or more population, and all school districts with 5,000 or more enrollment in October 1981. The sample also includes with certainty: all county, municipal, and township governments which operate their own school system(s); all school districts which provide college grade education; all transit special districts; all special districts with \$10 million or more in long-term debt outstanding, or whose total revenues or total expenditure equaled \$5 million or more in fiscal year 1982; and other local governments whose expenditures or level of indebtedness exceeded a designated ratio within each specified county (i.e., a county area having 100,000 or more population).

The remaining units were selected with probability proportional to size from a compilation of all local governments within individual county areas having 100,000 or more population. The balance of each State was further grouped by type and size of government. The probability of selection for each noncertainty government was based on the ratio of that government's expenditures or indebtedness to the total expenditures or indebtedness of all noncertainty governments within each of the specified county areas or balance of State groups.

DATA LIMITATIONS

Generally, these reflect the fact that the surveys from which this file was extracted are not designed specifically to obtain data on specific justice functions.

The survey sample for the local government estimates in this file also was not designed specifically to produce data on these activities. Thus, the sampling variability, or "standard error," for these three justice sectors is apt to be larger than for the major categories in the Census Bureau's regular surveys. The "standard error" is a measurement of variation among the estimates for all possible samples, of which this is one, having the same size and selected using the same sample design. Estimates derived from the different samples would vary from each other (and also from a complete census using the same data collection procedures). The standard error, therefore, measures the precision with which an estimate from one of these samples approximates the average result of all the possible samples.

The Census Bureau has calculated estimates of the standard errors for the sample-based estimates of local police and correction expenditures for fiscal 1984 and of police full-time employment for October 1986. For the expenditure estimates, the standard errors were found to be less than 0.5% for 25 States, between 0.5% and 1.0% for 16 States, between 1% and 2% for 6 States, and over 2% for 3 States. For the employment estimates, the standard errors were found to be less than 0.5% for 9 States, between 0.5% and 1.0% for 19 States, between 1% and 2% for 14 States, between 2% and 3% for 6 States, and over 3% for 2 States. Sampling errors for other years are expected to be of the same order of magnitude because the same basic sample design and survey procedures were used.

In reviewing the sample-based estimates in this report, it is important to bear in mind that the sampling variability for smaller components, such as type of local government detail, is likely to be greater than the standard errors listed above. Conversely, because State government figures are not subject to sampling variation, State-local aggregates produced for individual States are more reliable (on a relative standard error basis) than the local government estimates they include. Since national estimates of local government expenditure and employment would be based on summations of individual State data, they are more reliable than the State-area data.

The data also are subject to possible inaccuracies in classification, response, and processing that would occur if a complete census had been conducted under the same conditions as the sample survey. Every effort was made to keep such errors to a minimum through care in examining, editing, and tabulating the data submitted by government officials. Followup procedures were used extensively to clarify inadequate and inconsistent survey returns.

Readers should be generally cautious in comparing governments, because differences in functional responsibilities from State to State and government to government also can affect the comparability of expenditure and employment data. For example, some State governments directly administer certain activities that elsewhere are undertaken by local governments, with or without fiscal aid, and the same variation in the division of responsibilities exists for counties and cities.

Data Differing From Other Collections

The figures presented in this file differ in some cases from those previously published in the Census Bureau's finance and employment survey data collection because of the more intensive review procedures used for this special compilation, the refinements of data involved, and definitional differences.

FILE STRUCTURE

Expenditure and Employment Data for the Criminal Justice System [United States]: Extract File, 1984 is available from the ICPSR in two formats: card-image and OSIRIS. The card-image file contains several decks per case in a format based on 80 column punched cards. The data are sorted by case with all decks for a case together in ascending order.

The OSIRIS dictionary gives the format and other information for each variable in the OSIRIS data file. The dictionary or dictionary-codebook file is used in conjunction with the OSIRIS software package. The OSIRIS data file is constructed with a single logical record for each case. There are 81 variables on 321 cases.

The OSIRIS data file can be accessed directly through software packages or programs which do not use the OSIRIS dictionary by specifying the tape locations of the desired variables. These tape locations are given in the OSIRIS dictionary-codebook.

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear but are references to the descriptions which follow this example.

.....

[1] VAR 0016 [2] FIPS-STATE/COUNTY [3] MD=99999
 REF 0016 [4] LOC 84 WIDTH 5 [5] DK 2 COL 13-17
 [6] IMP DEC= dd

[7] FIPS-State/County

[8] FIPS codes apply only to individual local governments and were taken directly off the 1982 Census of Governments data file with no further verification.

[9] SEE NOTE(S) X

[10] Actual number is coded.

[11] [12]

99999. NA

.....

[1] Indicates the variable and reference numbers. A variable number and a reference number are assigned to each variable in the data collection. In the present codebook which documents the archived data collection these numbers are identical. Should the data be subsetted or rearranged by an OSIRIS program (e.g., MMP to intersperse data from another source, or TCOT to produce an analysis deck), the variable numbers would change to reflect the order of the new data collection, while the reference number would remain unchanged to reflect the variable number in the codebook describing the archived data collection.

- [2] Indicates the abbreviated variable name (maximum of 24 characters) used in the OSIRIS system to identify the variable for the user. An expanded version of the variable name can be found in the variable description list.

- [3] Indicates the code values of missing data. In this example, code values equal to 99999 are missing data (MD=99999). Alternative statements for other variables are "MD=8 OR GE 9," or "NO MISSING DATA CODES." Some analysis software packages (including the OSIRIS software package) require that certain types of data which the user desires to be excluded from analysis be designated as "MISSING DATA," e.g., inappropriate, unascertained, unascertainable, or ambiguous data categories. Although these codes are defined as missing data categories, this does not mean that the user should not or cannot use them in a substantive role if so desired.

- [4] Indicates the starting location and width of this variable when the data are stored on a magnetic tape in the OSIRIS format. If the variable is of a multiple-response type, the width referenced is that of a single response. In this example the variable named "FIPS-STATE/COUNTY" is 5 columns wide and is located in the 84th column within the record.

- [5] Indicates the location by deck and column(s) of this variable when the data are stored on cards or in card-image format (80-column format)

- [6] A variable containing data with implied decimals is denoted by the message "IMP DEC= dd," where dd is the number of decimal places implied in the variable.

- [7] This is the full text (question) supplied by the investigator to describe the variable. The question text and the numbers and letters that may appear at the beginning reflect the original wording of the questionnaire item.

- [8] Indicates an additional comment or explanation appended to the variable description.

- [9] A variable which has a footnote associated with it is denoted by the message, "SEE NOTE(S) X" where X is the number of the footnote referenced.
- [10] "Actual number is coded" would appear in the codebook if the variable had been declared continuous. In this example, the variable is categorical.
- [11] Indicates the code values occurring in the data for this variable.
- [12] Indicates the textual definitions of the codes. Abbreviations commonly used in the code definitions are "DK" (Do Not Know), "NA" (Not Ascertained), and "INAP" (Inappropriate).

ICPSR PROCESSING INFORMATION

The data collection was processed according to the standard ICPSR processing procedures. The data were checked for illegal or inconsistent code values which, when found, were recoded to OSIRIS missing data values. No consistency checks were performed. Statements bracketed in "[" and "]" signs in the body of the codebook were added by the processors for explanatory purposes.

VARIABLE DESCRIPTION LIST

APPENDIX B

CONSTRUCTING STATE-LOCAL GOVERNMENT EXPENDITURE TOTALS
AND LOCAL GOVERNMENT EXPENDITURE TOTALS

(CONTINUED)

CONSTRUCTING STATE-LOCAL GOVERNMENT EXPENDITURE TOTALS
AND LOCAL GOVERNMENT EXPENDITURE TOTALS

To avoid including duplicate intergovernmental expenditures in these totals, it is important to observe the following rules:*

LOCAL GOVERNMENT EXPENDITURE TOTALS

The local government expenditure total is the sum of these records:

County Total
City Total
Township Total

MINUS any amounts for intergovernmental expenditure to locals, which are shown in these fields:

FUNCTION	VARIABLE	RECORD LOCATION
Police protection	65	390-394
Judicial-Legal	71	422-426
Corrections	81	475-480

Thus, at the local level, total expenditure includes intergovernmental payments to the state only.

STATE-LOCAL GOVERNMENT EXPENDITURE TOTALS

The state-local government expenditure total is the sum of these records:

State Government
County Total
City Total
Township Total

*NOTE: These rules apply to expenditure data only.

(CONTINUED)

MINUS all amounts for intergovernmental expenditure, which are shown in these fields:

FUNCTION	VARIABLE	RECORD LOCATION
Police protection	64	385-389
	65	390-394
Judicial-Legal	70	417-421
	71	422-426
Corrections	80	470-474
	81	475-480

Thus, at the state-local level, total expenditure is equal to direct expenditure (net of all intergovernmental expenditure).

(CONTINUED)

APPENDIX C

DEFINITIONS OF TERMS

(CONTINUED)

Following is a glossary of terms, concepts, and categories used in this file and comments regarding their limitations.

These definitions are largely based on those used in the Census Bureau's governmental finances and employment statistics program.

These terms are grouped into four categories:

- Governmental Units and Types of Government
- Governmental Expenditure
- Governmental Employment
- Governmental Functions

GOVERNMENTAL UNITS AND TYPES OF GOVERNMENTS

GOVERNMENTAL UNITS. A government is an organized entity whose government character is evidenced by popular election of the officials or their appointment by public officials, high degree of public accountability, and the power to raise revenue to provide authorized services. In addition, a governmental unit must have sufficient discretion in the management of its own affairs to distinguish it from the administrative structure of any other governmental unit. (For detailed information concerning the identification and classification of governments, see Volume 1, GOVERNMENTAL ORGANIZATION, of the 1982 Census of Governments (GC82(1))).

FEDERAL GOVERNMENT. The term Federal, as used in this file, encompasses all civilian activities of the United States Government but excludes the armed forces. District of Columbia data are excluded from this category and included with data for municipalities.

STATE GOVERNMENTS. This category refers to the governments of the 50 States that constitute the United States.

LOCAL GOVERNMENTS. The Bureau of the Census classifies local governments by five major types--county, municipality, township, school district, and special district. Following is a brief discussion of the first three types of local government, which are the only ones for which data are presented in this file:

COUNTIES. Organized county governments are found throughout the Nation except in Connecticut, the District of Columbia, Rhode Island and limited portions of a few other States. These governments are legally designated as "boroughs" in Alaska and "parishes" in Louisiana. Excluded from county

(CONTINUED)

government statistics and included with municipalities or townships are certain local governments that combine area and governmental characteristics of both counties and municipalities or townships.

CITY (MUNICIPALITY). A municipality is a political subdivision within which a municipal corporation has been established to provide general local government services for a specific population concentration in a defined area. A municipality may be legally termed a city, village, borough (except in Alaska), or town (except in the New England States, Minnesota, New York, and Wisconsin). Included in this category are certain cities that are completely or substantially consolidated with their county governments, or for other reasons have no organized county government operations within their boundaries.

TOWNSHIP. Township governments, as distinguished from municipalities, are created to serve inhabitants of areas defined without regard to population concentration. This classification is applied to local governments in 20 States, including governmental units officially designated as "towns" in the six New England States, New York and Wisconsin, and some "plantations" in Maine and "locations" in New Hampshire.

GOVERNMENTAL EXPENDITURE

EXPENDITURE is all amounts of money paid out (net of recoveries and any correcting transactions) other than for retirement of debt (including interest), investment in securities, extensions of loans, or agency transactions. It includes only external cash payments and excludes any intragovernmental transfers and noncash transactions, such as the provision of meals or housing of employees. It also includes any payments financed from borrowing, fund balances, intergovernmental revenue, and other current revenue. In several instances, two or more governments share the expense of maintaining a court or a justice agency. In these cases, the allocable direct expenditure amount is reported for each government in the appropriate category. When a government pays pensions directly to retired employees from appropriated funds, such payments are included as expenditure of the government concerned. However, State and local government contributions to retirement systems which they operate are not included in expenditure data.

Expenditure is divided into two major categories by

(CONTINUED)

character:

1. DIRECT EXPENDITURE is all expenditure except that classed as intergovernmental and is further divided into two principal object categories:

a. DIRECT CURRENT OPERATION, which includes salaries, wages, fees and commissions, purchase of supplies, materials, and contractual services.

b. CAPITAL OUTLAY, which includes expenditure for the two sub categories below:

CONSTRUCTION: Production of fixed works and structures, and additions, replacements and major alterations thereto undertaken either in a contract basis by private contractors or through force account construction by the employees of the government. Included are the planning and designing of specific projects, the grading, landscaping, and other site improvement, and provision of equipment and facilities that are integral parts of the structure.

EQUIPMENT, LAND AND EXISTING STRUCTURES: Purchase of these assets as such, purchase of rights-of-way, and title search and similar activities associated with purchase transactions. Equipment is defined in detail below.

EQUIPMENT ONLY: Purchase and installation of apparatus, furnishings, office equipment, motor vehicles and the like having an expected life of more than 5 years. This includes both additional equipment and replacements. Rentals for equipment, including rental payments that may be credited on the purchase price if purchase options are exercised are classified as direct current expenditure. Equipment and facilities that are integral parts of constructed structures are classified under construction. These data are included in the above category.

The other object categories--interest on general debt, assistance and subsidies, and insurance benefits--are not applied to specific functions because they are not ordinarily available on a functional basis from government financial reports. In instances where bonded or mortgaged general indebtedness is identified for specific purposes, the interest payments are sometimes aggregated with other interest expenditures, which make it virtually impossible to arrive at reliable and consistent breakouts of such data over a long period of time.

(CONTINUED)

2. INTERGOVERNMENTAL EXPENDITURE comprises payments from one government to another, including grants-in-aid, fiscal assistance, and amounts for services performed by one government for another on a reimbursable or cost-sharing basis (for example, payments by one government to another for boarding prisoners). It excludes amounts paid to other governments for purchase of commodities, property, or utility services, any tax imposed and paid as such, and employer contributions for social insurance--e.g., contributions to the Federal Government for old-age, survivors', disability insurance and local government payments to state-operated retirement system on behalf of their employees.

TOTAL EXPENDITURE is direct and intergovernmental expenditure of a government or type of government for justice activities (see Appendix C concerning construction of local and state-local totals).

GOVERNMENTAL EMPLOYMENT

EMPLOYMENT AND EMPLOYEES, as used in this file, refer to all persons gainfully employed by and performing services for a government. Employees include all persons paid for personal services performed, including persons paid from Federally funded programs, paid elected officials, person in a paid leave status, and persons paid on a "per meeting," annual, semi-annual or quarterly basis. Unpaid officials, pensioners, person whose work is performed on a fee basis, and contractors and their employees are excluded from the count of employees. Under this definition are two classes:

1. FULL-TIME EMPLOYEES are defined to include those persons whose hours of work represent full-time employment in their employer government during the pay period including October 12, 1982. Generally, it includes full-time temporary or seasonal workers employed during that pay period.

2. PART-TIME EMPLOYEES are those persons who work less than the standard number of hours for full-time work in their employer government during the pay period including October 12, 1982, and persons paid by more than one government.

Derived from those two classes is:

FULL-TIME EQUIVALENT EMPLOYMENT, which is a computed statistic representing the number of full-time employees that could have been employed at the same total payroll cost if all personnel were engaged on a full-time basis at the

(CONTINUED)

average monthly pay applying to full-time workers; it is calculated separately for each particular justice function of a government by dividing the total payroll amount (full-time plus part-time) by the full-time payroll amount and multiplying the resultant quotient by the number of full-time employees. Where only part-time employees and payrolls are reported, full-time equivalent employment is calculated by dividing the total part-time pay by the average full-time salary for the particular justice sector and type of government.

OCTOBER PAYROLLS shown in the report represent gross payrolls for the 1-month period of October and comprise the gross payroll before deductions, including all salaries, wages, fees or commissions, paid to employees during the pay period which included the date of October 12, 1982. Payroll amounts reported for a period other than 1 month were converted to represent an amount for the month of October.

GOVERNMENTAL FUNCTIONS

POLICE PROTECTION is the function of enforcing the law, preserving order, and traffic safety. Includes police patrols and communications, crime prevention activities, temporary lockups and holding "tanks," traffic safety and engineering (but not highway planning and engineering), vehicular inspection, medical examiners and coroners, and buildings used exclusively for police purposes. Also covers law enforcement activities of sheriff offices.

Police protection employment data are further divided between SWORN employees, which represent persons with the power of arrest, and NON-SWORN employees, which are all others.

JUDICIAL-LEGAL data comprise these areas (not separately identified):

Judicial encompasses all civil and criminal courts and activities associated with courts such as law libraries, grand juries, petit juries, medical and social service activities (except public defense and probation, where separately identifiable), court reporters, judicial councils, bailiffs, and "register of wills," and similar probate functions. In some jurisdictions, it includes court ("civil") activities of sheriff offices. It excludes monetary judgments and claims or other payments of a government as a defendant in judicial or administrative proceedings.

(CONTINUED)

Although not shown separately, this function covers courts of all levels of legal jurisdiction: appellate (last resort and intermediate), general jurisdiction, and limited jurisdiction.

Legal services and prosecution includes the civil and criminal justice activities of the attorneys general, district attorneys, State's attorneys, and their variously named equivalents; corporation counsels, solicitors, and legal departments with various names. It includes providing legal advice to the chief executives and subordinate departmental officers, representation of the government in lawsuits, and the prosecution of accused violators of criminal law. The operations of various investigative agencies having full arrest powers and attached to offices of attorneys general, district attorneys, or their variously named equivalents are also included here.

It excludes legal units of noncriminal justice agencies, whose functions may be performed by a legal service department in other jurisdictions (such as a county counsel).

Public defense includes legal counsel and representation in either criminal or civil proceedings as provided by public defenders and other government programs that pay the fees of court-appointed counsel. These include court-paid fees to individually retained counsel, fees paid by the court to court-appointed counsel, government contributions to private legal aid societies and bar association-sponsored programs, and the activities of an established public defender office or program.

CORRECTIONS is that function of government involving the confinement and rehabilitation of adults and juveniles convicted of offenses against the law and the confinement of persons suspected of a crime and awaiting adjudication. Data for lockups or "tanks" holding prisoners less than 48 hours are included in "Police Protection." Corrections includes the operation of prisons, reformatories, jails, houses of correction, and other institutions. It also includes institutions, facilities and programs exclusively for the confinement of the criminally insane or for the examination, evaluation, classification and assignment of inmates and institutions and programs for the confinement, treatment, and rehabilitation of drug addicts and alcoholics IF the institution or program is administered by a correctional agency. Also covers pardon boards and parole and probation activities including resettlement or halfway

(CONTINUED)

houses for those not in need of institutionalization.

Correctional direct expenditure for State governments is further divided into two subcategories:

1. CORRECTIONAL INSTITUTIONS are prisons, reformatories, jails, houses of correction, penitentiaries, correctional farms, workhouses, reception centers, diagnostic centers, industrial schools, training schools, detention centers, and a variety of other types of institutions for the confinement and correction of convicted adults or juveniles adjudicated delinquent or in need of supervision, and for the detention of those adults and juveniles accused of a crime and awaiting trial or hearing. When an institution maintains a prison industry or agricultural program, data on the cost of production or the value of prison labor used by agencies of the same government, if identifiable, are excluded (and classed as expenditure for the function using the product or services). Expenditure for the manufacture, production, sale, and distribution of goods produced for sale or use outside the government are included under this heading. It excludes cost of maintaining prisoners in institutions of other governments.

2. OTHER CORRECTIONS consists of noninstitutional correctional activities, including pardon, probation, and parole activities, correctional administration not directly connectable to institutions, and miscellaneous items that cannot be directly related to institutional care.
