ACKNOWLEDGMENTS

Although the Estimates and Statistical Analysis Section is responsible for the semi-annual publication of the Population Projections, others in the Youth and Adult Correctional Agency made significant contributions which are greatly appreciated. Among those involved in the projections were (in alphabetical order) the:

- Board of Prison Terms
- Information Systems Branch
- Institutions Division
- Office of Budget Management
- Parole and Community Services Division
- Parole Hearings Division
- Planning and Construction Division

Introduction

This document contains the California Department of Corrections' (CDC) projections of institution, parole, and outpatient populations for Fiscal Years 1992-93 through 1997-98. The projections are based upon the most current available data and existing law.

I. Factors Affecting Population Increases

Over the last ten years, the population in CDC institutions has increased considerably.¹ On December 31, 1992, the population was 109,496 compared to 34,640 on December 31, 1982, an annual compound increase of 12.2 percent. The increase over the December 31, 1991 population of 101,808 was 7.6 percent.

During the second half of 1992, there was a resurgence in the institution population growth. From January through June 1992, the population increased by 2,544 inmates, while in the last six months of 1992 this figure more than doubled to 5,144. The increase in the last six months was driven by new admissions (11.4 percent growth versus -0.9 percent for January through June). The new admission population increased by 2,845 while the population of returns from parole with new terms (PV-WNT) increased by 1,640. The remaining institution population, consisting of parole violators and those awaiting revocation hearings (PV-RTC/PendRev) increased by only 659 during the last six months, which is reflective of the continued low return rates as a result of programs implemented in July 1991 (Revised ID/Warrants Guidelines and Community Management of Non-Criminal Violations).

The increase in population in years prior to June 1991 was due primarily to the impact of legislative changes, a rise in arrests and convictions, a propensity to sentence to state prison and an increase in parole violator returns. The increases in parole violator returns resulted from a combination of factors, including severe crowding in local jails and court orders against such crowding, and a steadily increasing parolee population.

Over the years, voter initiatives, court decisions, legislation and administrative policy have played, and continue to play, key roles in affecting the population level of California's prisons. Voter initiatives and legislation enacted since 1976 have significantly limited the ability of the courts to sentence certain offenders to local disposition rather than state prison, as well as increased the penalties for a great number of felony offenders. Some of the major offenses for which the possibility of probation has been restricted or eliminated include residential burglary, child molestation, specific sex offenses, arson and other offenses involving the use of a firearm. Legislation has increased sentences for committing murder, residential burglary and robbery, manslaughter, certain drug and sex offenses, crimes against defenseless victims, other crimes involving the use of a firearm, and many others.

Recent administrative policy and court decisions have also translated into stronger law enforcement and more severe criminal sanctions. Given the current tenor of the Legislature, the court system and the public-at-large, California's prison population can be expected to continue to grow in the foreseeable future.

¹The institution population numbers include inmates in prison, inmates under supervision in community-based facilities, and inmates in State hospitals.

II. Comparison of Spring 1993 with Fall 1992 Projections

As a result of the increases in population since June 30, 1992, the Spring 1993 projected institution population has been increased versus the Fall 1992 Budget projection. The increase is due primarily to a resurgence in new admissions from court coupled with the fact that a higher percentage of these new admits are violent offenders who usually receive longer sentences.

The Fall 1992 institution population projections covered the six fiscal year period starting after June 30, 1992. In those projections, the total population was projected to be 110,275 by December 31, 1992, which turned out to be 779 higher than actual for that date. This difference was largely due to a smaller PV-RTC/PendRev population than projected, which camouflaged the fact that the new admission population was 1,058 higher than projected. As a result of the continuing increases in new admissions and the assumption that the PV-RTC/PendRev and PV-WNT rates will only be slightly lower than previously, the June 30, 1993 total prison population is expected to be 651 higher than forecasted six months ago. Likewise, the June 30, 1998 population difference is expected to increase versus Fall 1992, by an additional 13,568 inmates. The six-year annual compound increase from June 30, 1992 to June 30, 1998 is 6.8 percent, up from 5.1 percent projected in Fall 1992. The total population is projected to be 154,507 by June 30, 1998.

The parole population supervised in California is anticipated to increase at a higher rate throughout the projection period than in the Fall 1992 projections. This growth is primarily the result of an increase in new admissions and slightly lower PV-RTC/PendRev and PV-WNT rates. By June 30, 1993, the number of parolees and outpatients supervised in California is projected to be 87,988, an increase of 1,038 from last fall. The Spring 1993 projection estimates a parole population of 120,983 by June 30, 1998, an increase of 16,558 from the last projection.

The civil narcotic addict institution population has increased steadily since 1983. The total (male and female) addict institution population, which was 3,586 on December 31, 1992, is expected to increase to 4,923 by June 30, 1998. Similarly, the total number of outpatients supervised in California is expected to increase from 3,393 on December 31, 1992 to 4,828 on June 30, 1998.

Table A on the following page compares population projections differences between Fall 1992 and Spring 1993.

Figures 1 and 2 on Page 4 graphically display the Spring 1993 projections for total institution population and total parole and outpatient population. Figure 1 shows the actual and projected institution population, while Figure 2 shows the actual and projected California supervised parole and outpatient population, both for the period June 30, 1983 through June 30, 1998.

1998	104,425	120,983	16,558

*Actual Data

²The population of the institutions consists of felons, civil narcotic addicts, county diagnostic cases, Youth Authority wards, persons from other states, federal prisoners, and county prisoners held for safekeeping. Felons include individuals under supervision in community-based facilities (in contract and non-contract beds) and State hospitals, as well as those actually in prison.

The Spring 1993 projections are summarized in Tables 1 and 2, and are presented in greater detail in Tables 3 through 17. Tables 3 and 4 present the quarterly institution populations, while Tables 5 and 6 present detailed projections by inmate placement needs. Tables 7 through 10 project the movement of institution (including civil narcotic addicts) populations, Table 11 presents detail on the other institution populations, and Tables 12 through 17 present detailed projections of the parole and outpatient population.

Premises

I. Admission Rates

The actual and projected total felon new admissions to prison for FY 1982-83 through 1997-98 are displayed in Figure 3 on Page 6. Figure 4, also on Page 6, shows the actual and projected total felon admission rates for the same period. Table B summarizes the actual admissions to state prison for total felons for FY 1983-84 through FY 1992-93; while Table C displays the projected admissions for FY 1992-93 through FY 1997-98. Consistent with past practice, admission rates displayed in Tables B and C are expressed as the number of felon admissions to prison from court per 100,000 California residents, aged 18-49.

Table B

ACTUAL TOTAL FELON ADMISSIONS TO PRISON
PER 100,000 STATE RESIDENTS (AGED 18-49)
FY 1983-84 THROUGH 1992-93

Fiscal Year	State Population Aged 18-49 (In Thousands)	Number of CDC Total Felon Admissions ^a	Admission Rate ^b
1983-84	12,562.1	17,979	143.1
1984-85	12,823.6	18,796	146.6
1985-86	13,120.5	21,834	166.4
1986-87	13,411.7	25,344	189.0
1987-88	13,720.6	27,843	202.9
1988-89	14,047.6	31,975	227.6
1989-90	14,843.2	37,421	252.1
1990-91	15,622.2	39,420	252.3
1991-92	15,910.5	38,228	240.3
1992-93 ^c	16,155.8	42,736	264.5

^a Not including CYA "M" cases and other state/federal admissions.

^b Number of CDC felon admissions per 100,000 California state residents, aged 18-49.

^c Based on July-December 1992 actual plus January-June 1993 projected admissions.

Actual felon admissions during the first half of FY 1992-93 increased 11.6 percent compared to the same period of FY 1991-92. This contrasts sharply with the 1.3 percent decline for the January-June 1992 period compared to the January-June 1991 period. The increase in actual felon admissions during the last six months was due to strong increases in violent, drug, and property offenses. Violent offenses increased by 16.8 percent during the July-December 1992 time period over the same period for 1991, while drug offenses increased by 10.3 percent. These increases are a sharp turnaround compared to the 0.2 percent decline in violent offenses and the 3.9 percent decline in drug offenses in the January-June 1992 period over the same period for 1991. The number of property offenders committed has continued to increase, as indicated by the 9.5 percent increase in the last six months compared to the 2.9 percent increase in the January-June 1992 period.

Table C, below, shows that Spring 1993 felon admission projections are higher than Fall 1992 Budget projections due to the growth in felon admissions in the first six months of FY 1992-93.

Table C

PROJECTED TOTAL FELON ADMISSIONS*
FY 1992-93 THROUGH 1997-98

Fiscal Year	Fall 1992	Spring 1993	Difference	Spring 1993 Rates
1992-93	40,302	42,736	2,434	264.5
1993-94	41,308	45,358	4,050	277.2
1994-95	42,741	48,080	5,339	290.3
1995-96	44,174	50,865	6,691	303.6
1996-97	45,607	53,651	8,044	317.5
1997-98	47,042	56,464	9,422	331.7

* Not including CYA 'M' cases and other state/federal admissions.

New admissions are projected based on two major factors: (1) long-term trend, and (2) the estimated impact of legislation, voter initiatives, court decisions, and administrative policy. Contrary to the Fall 1992 Budget Projections, in which the admissions projections were based solely on exponential smoothing techniques, the Spring 1993 admissions projections are based on a composite of exponential smoothing and linear regression. The new method averages the two projections, gradually placing more weight on the more stable linear regression. The result is a projection of admissions which increases stability in the out-years, thus providing more realistic information for long-range planning without reducing short-term accuracy.

No new additional legislation has been chaptered since the Fall 1992 projections which would increase or decrease new admissions.

II. Significant Chaptered Legislation and Initiatives

Legislation discussed in Section A, below, was chaptered since the Fall 1992 projections and is included in the Spring 1993 population projections if possible. Section B lists legislation included in the Fall 1992 projections. In all legislation that follows, the full impact of the law change occurs after December 31, 1992.

A. Legislation chaptered since the Fall 1992 Projections:

1. Chapter 1063, Statutes of 1992 (SB 1124, Presley), effective January 1993, provides selected first-time male felon offenders with an alternative sentencing program consisting of a 120-day behavior modification/work program within a 'boot camp' atmosphere, a 60-day residential work training program, and a 120-day intensively supervised parole period. The estimated impact from this legislation is a savings of 158 beds per year beginning in FY 1993-94.

2. Chapter 1175, Statutes of 1992 (SB 1509, Leonard), effective January 1, 1993, prohibits the earning of sentence reduction credits for specified inmates who are housed in Administrative Segregation or Security Housing Unit as punishment for specified misconduct. Because available data do not identify those persons currently housed in Ad Seg or SHU who have committed one of the specified acts of misconduct, the impact of this bill cannot be estimated.

B. Legislation included in the Fall 1992 Projections:

1. Statutes of 1990: Chapters 1560 (SB 2079, Roberti); 1580 (SB 2863, Presley); 1664 (AB 2645, Epple).
2. Statutes of 1989: Chapter 1167 (AB 1504, Quackenbush).
3. Statutes of 1988: Chapters 1264 (SB 2073, Green); 1487 (AB 3423, Costa).
4. Statutes of 1986: Chapter 1429 (AB 4026, Peace).
5. Statutes of 1985: Chapter 191 (AB 912, Leonard).

A description of the above legislation may be found in the Fall 1988, Spring 1989, Spring 1990, and Spring 1991 projections publications.

III. The Inmate Work/Training Incentive Program (IWTIP)

The Spring 1993 projections accommodate the proportion of new admission and PV-WNT determinate sentence law felons who are eligible to earn one-half sentence reduction under IWTIP. Those not included in this eligible population are lifers, non-felons, inmates in lockup, inmates choosing not to participate, and inmates with a term of one year and one day. Approximately 81 percent of the July 1, 1992 eligible population had full-time assignments and thus earned one-half sentence reduction. Past analyses have shown that the percentage of eligible inmates earning the sentence reduction varies little from 81 percent. Given this observation and the fact that the number of IWTIP staff positions is assumed to remain unchanged from its current level, the Spring 1993 projections estimate that IWTIP participation will remain at the 81 percent level.³

IV. Mean Sentence and Preconfinement Credits

As shown in Table D, the mean sentence during the last calendar year increased for both male and female felons. (The analysis was restricted to those who received determinate sentences of 15 years or less in order to provide information relevant to the six-year projection period.) The mean sentence for male felons increased by 0.4 months to 38.1, while the mean sentence for female felons increased by 0.5 months to 30.2. The mean sentence increases were primarily due to a 1.6 percent increase in the proportion of violent offenses which generally carry a longer sentence. Mean preconfinement credits increased slightly for male felons and remained the same for females. The net increase in sentence should be about 9 days for males and 15 days for females.

³Although some PV-RTCs are eligible to earn day-for-day credits, this information is not used to simulate the release of this group, because historical release trends have consistently provided more accurate projections. On December 31, 1992, it is estimated that, including PV-RTCs, there were 69,434 felon inmates earning day-for-day credits, which is 63.4 percent of the total institution population.

Table D
MEAN SENTENCE AND PRECONFINEMENT CREDITS
(In Months)
Felons Admitted With Determinate Sentences of Fifteen Years or Less

	<u>MALE</u>		<u>FEMALE</u>	
	<u>Jan 92- Dec 92</u>	<u>Jul 91- Jun 92</u>	<u>Jan 92- Dec 92</u>	<u>Jul 91- Jun 92</u>
Mean Sentence	38.1	37.7	30.2	29.7
Mean Preconfinement Credits	<u>7.1</u>	<u>7.0</u>	<u>7.2</u>	<u>7.2</u>
Mean Sentence Minus Mean Preconfinement Credits	31.0	30.7	23.0	22.5

V. Placement Need Projections

As in the Fall 1992 projections, projections of institution bed needs by level are based on consideration of both inmate classification score level and administrative determinants, such as institutional security and public safety, as specified in Section 62010 of the CDC Operations Manual. It is assumed that the male felon reception center population will increase proportionately with the increase in male felon intake. Medical/psychiatric and protective housing projections are included, assuming a constant proportion of the number of inmates of each classification level in each of these categories over the projection period. Security housing unit projections assume a cap of 2,500 male felon beds.

VI. Parole Violators

For the six-month period July-December 1992, there were 16,226 male felon PV-RTC/PendRev returns, which is 2,383 (12.8 percent) fewer than the same six-month period in 1991, and 551 (3.3 percent) fewer than projected in Fall 1992. The PV-RTC/PendRev rate⁴ for the first six months in FY 1992-93 was 39.6--1.4 lower than projected in Fall 1992.

The drop in the PV-RTC rate, starting in June 1989 and continuing through June 1992, was due to changes instituted by the parole administration. These changes placed greater emphasis on consistent decision-making by staff and use of community-based management options for parolees, consistent with the protection of the public. Some examples include more review of case management decisions and development of community-oriented means to work with drug offenders. Also, there has been increased use of various survival services, including chemical dependency treatment, emergency shelter, pre-employment training and basic subsistence.

⁴Parole violator rates are a measure of the number of returns in a year divided by the average daily population of parolees plus parolees-at-large (PAL). Unless otherwise indicated, the term PV-RTC includes parolees returned pending revocation (PendRev).

Beginning around July 1991, two new parole programs, Revised ID/Warrants Guidelines and Community Management of Non-Criminal Violations, were instituted, causing the male felon PV-RTC rate to decline from 50.6 in June 1991 to 37.8 in June 1992. The effect of these two programs was expected to stabilize in June 1992 with a PV-RTC rate of about 40.7. While there has been some fluctuation in the rates during the first six months of FY 1992-93, the six month average showed a rate of 39.6. As a result of this 1.1 difference (40.7 projected vs. 39.6 actual), the Spring 1993 projections will maintain the slightly decreasing trend in the male felon PV-RTC rate assumed in the Fall 1992 projections, but starting somewhat lower than the Fall 1992 projections.

The number of male felon PV-WNT returns grew from 7,550 for July-December 1991 to 8,694 for July-December 1992, an increase of 1,144 (15.2 percent). The male felon PV-WNT rate for July-December 1992 was 21.2--0.5 lower than projected in Fall 1992. Consequently, the Spring 1993 projections maintain the slightly increasing male felon PV-WNT rates assumed in the Fall 1992 projections, but at a lower level.

Figure 5 on the following page displays the actual number of male felon parole violator returns by quarter since December 1981. Figure 6 shows the male felon PV-RTC/PendRev rates by quarter from June 1983 to June 1998, while Figure 7 tracks the male felon PV-WNT rates. These last two charts also include the projected rates for Spring 1993.

* Projected

1 Includes county diagnostic cases, persons from other states, federal prisoners, county safekeepers, and CYA wards.

2 Community beds exclude Substance Abuse Treatment Units and are based on February 11, 1993 activation schedule provided by Parole and Community Services Division.

3 This includes 64 CASP beds which are to be effective May 1, 1993.

4 Includes private, county, and SB 1591 Community Correctional Facilities (CCF). Also included are 31 CASP CCF beds, which are effective May 1, 1993.

5 Female Felon work furlough includes Prisoner-Mother beds.
