HEALTHY SCHOOLS

A Directory of Federal Programs and Activities Related to Health Promotion Through the Schools

Compiled by the Federal Interagency Ad Hoc Committee on Health Promotion Through the Schools

U.S. Department of Health and Human Services

1992
For additional information concerning this publication, please contact the Office of Disease Prevention and Health Promotion, Public Health Service, U.S. Department of Health and Human Services, 330 C Street SW., Suite 2132, Washington, DC 20002, phone (202)472-5660.
Foreword

Good health is essential to children's growth and development, to their ability to take advantage of educational opportunities, and to their future prospects. The profile of health risks facing today's children and adolescents is changing. Once dominated by the threat of major infectious diseases, many of the current risks are generated by social, behavioral, and environmental factors. Many causes of morbidity and mortality are preventable and result from behaviors that usually are established during childhood and adolescence. Additionally, many of the most important risk factors for chronic disease in later years have their roots in youthful behaviors.

Children and adolescents must be healthy in order to learn, and they must learn in order to be healthy. The knowledge, attitudes, and skills developed as a result of effective school health programs enable individuals to make informed choices about behavior that will affect their own health throughout their lives, as well as the health of the families for which they will be responsible and the health of the communities in which they live.

The first of the National Education Goals, set out in AMERICA 2000, calls for every child in America to "start school ready to learn." Successful school health programs can help children in elementary and secondary school maintain this healthy start. Successful school health programs likewise represent a key to attaining the Healthy People 2000 National Health Promotion and Disease Prevention Objectives. Numerous Federal programs now address elements of school health. With this publication, it is the intention of the Department of Education and the Department of Health and Human Services to provide a guide to Federal resources available to help communities plan and implement school health programs that fit their particular needs. Working together, health professionals, educators, parents, and others in the community can make "Healthy Schools" a reality.

Louis W. Sullivan, M.D.
Secretary
Department of Health and Human Services
Federal Interagency Ad Hoc Committee on Health Promotion Through the Schools

In 1983, the U.S. Department of Health and Human Services and the U.S. Department of Education co-sponsored an "Interagency Meeting on Health Promotion Through the Schools." A survey carried out in preparation for this meeting ascertained that the activities of numerous Federal departments, agencies, and offices were relevant to school health. Participants in this interagency meeting expressed the need for an ongoing forum to discuss Federal school health promotion initiatives.

Since 1983, the U.S. Public Health Service’s Office of Disease Prevention and Health Promotion in the Department of Health and Human Services has coordinated and chaired the Federal Interagency Ad Hoc Committee on Health Promotion Through the Schools. The committee meets bimonthly and serves as an ongoing forum for sharing information among Federal agencies about programs and activities related to school health and for promoting interagency coordination and collaboration. In July 1990, the U.S. Department of Education’s Comprehensive School Health Education Program began co-chairing the committee along with the Office of Disease Prevention and Health Promotion. Agencies and offices of the Federal departments listed below participate on the Ad Hoc Committee on Health Promotion Through the Schools.

U.S. Department of Agriculture
U.S. Department of Defense
U.S. Department of Education
U.S. Department of Health and Human Services
U.S. Department of the Interior
U.S. Department of Justice
U.S. Department of Transportation
U.S. Environmental Protection Agency

Form to Provide Additional Information for the Directory
Introduction

Two recent initiatives, *Healthy People 2000: National Health Promotion and Disease Prevention Objectives* and the *National Education Goals*, focus attention on the important interrelationships between health and education for children and youth of school age. Fully 15 of the *Healthy People 2000* objectives are directly achievable by schools, and schools will play important roles in achieving nearly 100 additional *Healthy People 2000* objectives. The *National Education Goals* address the health aspects of school readiness and the provision of safe, alcohol-and drug-free school environments offering comprehensive K-12 alcohol and drug prevention education. Both the *Healthy People 2000* objectives and the *National Education Goals* include objectives and goals to increase the high school graduation rate and point out the inextricable relationship between health and educational success.

In the Spring of 1991, the Federal Interagency Ad Hoc Committee on Health Promotion Through the Schools, working with the Public Health Service's Office of Disease Prevention and Health Promotion, asked staff from seven Federal departments, as well as independent Federal agencies and commissions, to provide information about any of their programs or other activities which they felt were relevant to health promotion through the schools. For purposes of this undertaking, school health promotion included school health education and its various categorical components; nutrition and healthy school food services; school health services, including immunizations, school nursing, screening, counseling and mental health, and school-based health services; physical education, sports, and recreation; the school as a healthy environment; worksite health promotion for faculty and staff; and school and community health promotion efforts. In addition, those providing information were asked to delineate the target groups for their school health-related programs or activities, including students (preschool, elementary, middle school or junior high, high school, or students with special needs); out-of-school, high-risk youth; parents; faculty and staff; or the community. They were also asked for brief descriptions of their programs or activities, a listing of any materials or publications produced by their programs which were considered relevant to school health, and the names of individuals to contact for further information about the programs or activities. In addition, Federally supported clearinghouses and information centers were asked to provide information if they considered their activities and available resources relevant to school health, as defined above.

In all, staff from 112 Federal programs and 35 Federally supported clearinghouses or information centers identified their activities as relevant to school health. This information is compiled in this publication under *Part 1: Programs and Activities*, and *Part 2: Clearinghouses and Information Centers*. 
The committee sees at least three uses for this compilation of information. First, to disseminate information about Federal programs related to school health to promote coordination and collaboration, where appropriate, to reduce duplication, and to identify and fill gaps in programming. Second, to respond to increasing interest from Congress regarding the scope of Federal activities related to school health. Third, and perhaps most important, to aid those working at the level of the school district, individual school, and classroom, who are planning, implementing, and evaluating school health programs. This volume provides information about Federal programs which may offer potentially useful resources, including publications and other materials, to address various components of school health programs.

While the committee made every attempt to gather the full range of relevant information, there were undoubtedly relevant programs which did not respond to the requests for information or which were not identified. A form for providing additional information is included at the end of this publication. It is hoped that programs not included initially will provide this information to the committee.

*The Federal Interagency Ad Hoc Committee on Health Promotion Through the Schools*
PART 1

PROGRAMS AND ACTIVITIES
Nutrition Education and Training Program

Areas of Emphasis

- Health Education Curricula Personnel training Program strategies, approaches, media

  Subject Matter: Nutrition

- Nutrition/Healthy School Food Services

Target Groups

- Students
  - Preschool
  - Elementary
  - High school
  - Middle school/junior high

- Parents
- Faculty and Staff (School Food Service Personnel)
- Out-of-School, High-Risk Youth
- Community

Program Profile

The Nutrition Education and Training Program (NET) was originally authorized by the Child Nutrition Act, as amended by Public Law 95-166. Public Law 101-147 reauthorized the program for a 5-year period, Fiscal Years 1990 through 1994.

The purpose of NET is to encourage good eating habits and teach children and parents the relationship between food and health; to train food service personnel in nutrition and food service management and to encourage the use of the cafeteria as an environment for learning about food and nutrition; to instruct educators in nutrition and in the use of the cafeteria as a learning laboratory; and to develop appropriate educational materials and curricula.
In the first two years of funding the annual appropriation was $26.2 million, providing the authorized 50 cents per child based on school enrollment data for each State, with a minimum State grant of no less than $75,000. With a decrease in funding levels in succeeding years to a level of $5 million, the rate per child was adjusted downward accordingly and the minimum State grant lowered to $50,000 by an amendment to the regulations in 1987. Public Law 101-147 authorized incremental annual increases in funding beginning in FY90 to a top level of $25 million in FY93 and FY94. The minimum grant level would increase, accordingly, on an incremental basis each year to $75,000 in any year when the funding level is $20 million or more. The appropriation was increased to $7.5 million in FY91, and the minimum grant was increased to $56,250.

NET participation data reported for FY89 showed that the program instructed over 60,000 food service personnel, approximately 33,000 teachers, and close to 4 million children.

The Nutrition Education and Training Coordinator in each State develops plans with priorities to meet the identified needs for each target group.

National School Lunch and Breakfast Programs

Areas of Emphasis

• Health Education

  Subject Matter:
  Nutrition

• Nutrition/Healthy School Food Services

Target Groups

• Students

  Preschool  Elementary  Middle school/junior high
  High school

• Faculty and Staff

Program Profile

These programs are authorized by the National School Lunch Act (National School Lunch Program) and by the Child Nutrition Act (School Breakfast Program).

The purpose of these programs is to safeguard the health and well being of the Nation’s children through the service of nutritious school lunches and breakfasts and to increase consumption of domestic agricultural products.

The program began in 1946; $4.5 billion was expended in FY89. The National School Lunch Program currently operates in 91,000 schools. Almost all school children have access to the National School Lunch Program; free and reduced-price meals are provided for needy children.
Materials

- State education agencies, which operate the School Breakfast Program and the National School Lunch Program at the local level, are primarily responsible for development of publications or other such materials.

Child and Adult Care Food Programs

Areas of Emphasis

• Health Education
  Information

  Subject Matter:
  Nutrition

• Nutrition/Healthy School Food Services

Target Groups

• Students
  Preschool
  Elementary

Program Profile

The Child and Adult Care Food Program is authorized by the National School Lunch Act, as amended. The program’s purpose is to provide nutritious meals and snacks to children in child care centers and family day care homes.

This is an entitlement program funded annually through general appropriations. This program has been feeding children in care since 1968; it feeds approximately 1 million children each day.

Nutrition Guidance for Child Nutrition Programs

Areas of Emphasis

• Nutrition/Healthy School Food Services

Target Groups

• U.S. Department of Agriculture Child Nutrition Program Cooperators

Program Profile

The Child Nutrition and Women, Infants, and Children Reauthorization Act of 1989 requires the Secretary of Agriculture and the Secretary of Health and Human Services to jointly develop a publication to be entitled, Nutrition Guidance for Child Nutrition Programs. This publication will be distributed in Spring 1992, to all school food service authorities, institutions, and organizations participating in the Child Nutrition Programs.

The target audience, approximately 275,000 program cooperators, varies from food service directors of large multi-unit school systems to family day care providers in a home setting.

This nutrition guidance, developed jointly by the U.S. Departments of Agriculture and Health and Human Services, gives nutrition advice to those responsible for preparing meals for children under the Child Nutrition Programs. This guidance is based on Nutrition and Your Health: Dietary Guidelines for Americans, third edition, 1990, which provides advice for healthy Americans ages 2 and over—not for younger children and infants, whose dietary needs differ.

Nutrition Guidance for Child Nutrition Programs is the first in a series of revised technical assistance efforts to help food service personnel and other persons responsible for feeding children improve children’s health by offering meals in the Child Nutrition Program that reflect current dietary guidelines.

Human Nutrition Program

Areas of Emphasis

• Health Education Curricula

  Subject Matter:
  Nutrition                   Home economics

Target Groups

• Students
  Middle school/junior high   High school

Program Profile

Activities of this division include development of a teaching kit including:

• Nutrition and Your Health: Dietary Guidelines for Americans (brochure)
• Dietary Guidelines and Your Diet (series of 7 bulletins describing how to implement each of the Dietary Guidelines)
• Dietary Guidelines and Your Diet: Home Economics Teacher’s Guide (curriculum guide presenting objectives, key points, learning activities, and reproducible activity masters for nine lessons)

NOTE: A similar teaching kit designed specifically for the health education curriculum in secondary schools is targeted for release in Spring 1992. Distribution plans are currently being coordinated by HNIS/USDA and the Association for the Advancement of Health Education (AAHE). It is anticipated that single copies will also be available free to junior and senior high school health education teachers.

Materials

Single copies of the materials listed above are available free to junior and senior high school home economics teachers who write on school letterhead stationery.

- **Out-of-School, High-Risk Youth**

Program Profile

The Department of Defense Dependents Schools provides a comprehensive health and physical education curriculum to approximately 10,000 students in grades kindergarten through high school in 20 countries. The
health curriculum provides instruction in all areas of health including nutrition, socially transmitted diseases, and physical fitness. The health coordinators have recommended that all Department of Defense Dependents Schools faculty participate with students in the fitness activities. The schools operate as a part of the Defense Department and are required by congressional mandate to maintain instruction comparable to the best schools in the continental United States.

Materials

• A Health Manual is currently being developed.

16—Healthy Schools
Navy Personal Excellence Partnership Program

Areas of Emphasis

• Health Education

  Subject Matter:
  Alcohol or other drugs
  Tobacco
  Injuries/safety
  Life skills
  Nutrition
  Physical fitness

• Physical Education/Fitness/Sports/Recreation

Target Groups

• Students
  Preschool
  High school
  Elementary
  Middle school/junior high

Program Profile

In 1985, the Navy established a Personal Excellence Partnership Program to address the growing gap between the skills of young people entering the workforce and the high-tech requirements of employers, including the Navy. The program embodies a whole person approach to excellence—education, health promotion, and citizenship. This mind, body, and spirit approach is unique among the Nation’s school partnerships. Currently, the Navy’s program is reaching over 150,000 young people, preschool through twelfth grade, in schools and youth organizations nationwide. There are more than 790 school partnerships involving over 17,000 military and civilian volunteers. Navy men and women assist students by serving as tutors, mentors, and role models. They also conduct lectures, workshops, fitness runs, health fairs, computer training, and community service experiences. The Navy encourages its local commands to collaborate with public and private sector organizations to maximize the use of all available resources. Additionally, such collaboration empowers the community to chart its own course of action for youth excellence.

A headquarters office at the Bureau of Naval Personnel provides policy guidance and technical assistance to the fleet. Coordination of Navy-wide efforts occurs through regional and local personal excellence partnership coordinators. Navy partnerships support President Bush’s call for volunteerism, the National Health Promotion and Disease Prevention Objectives for the Year 2000, and the National Education Goals. The White House and Congress have recognized the Navy as a leader in partnership efforts. Five Navy partnerships have been designated as the President’s “Daily Points of Light.” The Navy is committed to working with our young people to help them reach their highest potential as well-educated, healthy, and fit citizens, motivated to serve others and able to enter any workforce.

Program Profile

The Department of Defense Family Advocacy Program (FAP) conducts programs in the Army, Navy, Marine Corps, and Air Force to help families overcome the effects of child and spouse abuse. The mission is to provide prevention, identification, treatment, and reporting in crises involving child abuse and spouse abuse. The common goal is to prevent abuse whenever possible, to recognize abuse when it exists, and to provide competent treatment for all family members where appropriate. FAP education and awareness efforts have been extensive, but as the program continues to grow, prevention of abuse will increasingly become the major goal. Child and spouse abuse incident data are forwarded from installations and medical activities to the three service central registries, then submitted to the Office of the Secretary of Defense semi-annually. The continued education of service professionals begins with a two-week, joint-Service Family Advocacy Staff Training course for all new FAP personnel. Additional training occurs with the establishment and operation of a
Department of Defense team in response to the alleged child sexual abuse incidents in Department of Defense sanctioned "out-of-home" care settings. During the last few years, a Family Advocacy Quality Assurance and Standards plan for the Department of Defense was developed and implemented, a national hotline for individuals to report child abuse or safety violations in military child development centers or family child care homes was developed, criminal history background checks were conducted on individuals working with children, increased coordination occurred with the other Federal agencies conducting prevention and intervention programs for children, while military commanders continued to seek assistance from local Child Protective Services Agencies.

The Department operates an information clearinghouse for military families and the professionals who serve them. Some materials provided are appropriate for teachers and other school professionals.

- **Community**

Program Profile

Child Development Services (CDS) are provided for children 6 weeks through 12 years of age at 640 installations worldwide and include 738 child development centers and over 10,000 Family Day Care Homes. Over 150,000 children are served annually in these programs. The programs are funded with a combination of appropriated fund dollars and nonappropriated funds (parent fees). The program is designed to provide full-
day, part-day school-aged, and hourly care for dependents of military and civilian employees of the Department of Defense. Department of Defense Instruction (DoDI) 6060.2 "Child Development Program" establishes policy, assigns responsibility, and prescribes standards and operating procedures for the program. Public Law 101-189, The Military Child Care Act of 1989, prescribes funding and other program requirements.

Military Child Development Programs follow United States Department of Agriculture Child Care Food Program guidelines for nutrition. All personnel working in CDS are training extensively in health procedures; nutrition; and child development including physical, emotional, social, and cognitive development. Immunizations and health screening are required and are completed by the installation Military Medical Treatment Facility.

Comprehensive School Health Education Program

Areas of Emphasis

• Health Education
  Curricula
  Personnel training
  Program strategies, approaches, media
  Evaluation and/or dissemination of successful programs

Subject Matter:
  Comprehensive health education

• Physical Education/Fitness/Sports/Recreation
• Worksite Health Promotion for Faculty and Staff
• School and Community Health Promotion

Target Groups

• Students
  Elementary
  Students with special needs/special education
  Middle school/junior high
  High school

• Parents
• Faculty and Staff
• Community
• State Education Agencies/Professional Associations and Organizations

Program Profile

This program is authorized under the Secretary's Fund for Innovation in Education, P.L. 100-297, section 4695, April 28, 1988.

This program provides funds for assistance to State and local educational agencies, institutions of higher education, private schools, and other public and private agencies, organizations and institutions for a broad variety of activities related to improving health education for elementary and secondary students. Activities may

Programs and Activities—23
include programs providing training of school personnel who will implement health education programs, the development of comprehensive school health education programs, the assessment of school health education programs, the identification and dissemination of model school health education programs, and/or the dissemination to schools of information related to nutrition, personal health and fitness, disease prevention, accident prevention, and community and environmental health, and other urgent health problems affecting school-age youth.

The program currently supports innovative projects of national significance. Key groups conducting these innovative programs include State agencies, university-school system partnerships, national educational associations, regional educational laboratories, and numerous local educational agencies. Well over half of the programs cover the full K-12 school spectrum, whereas other programs focus on elementary school or on secondary school. Although the target for most of the projects is the total student population, some priority is given to the underrepresented and underserved. Similarly, although the majority of projects are directed at general statewide needs, they collectively include urban models, suburban models, and rural models.

Two national technical assistance workshops are held annually for project leadership teams and leaders from a broad array of major national agencies and organizations from the private and public sectors concerned with comprehensive school health education—one in the fall in Washington and one in the spring in cooperation with the annual National Conference of the American Alliance for Health, Physical Education, Recreation, and Dance and the American Alliance for Health Education.

Meetings are regularly held with representatives of other major health education programs, both within the government and in the field, to share information and develop cooperative activities.

The primary emphasis in the new competitions will be on demonstrating and evaluating promising approaches to comprehensive school health education and providing the training needed to implement such programs, and spreading the impact of effective comprehensive school health education programs.

The program coordinator co-chairs the Federal Interagency Ad Hoc Committee on Health Promotion Through the Schools. A detailed summary of other program accomplishments is available from the program office.

Program Profile

The National Diffusion Network (NDN) is a Federally funded system that makes exemplary educational programs available for adoption by schools, colleges, and other institutions.

It does so by providing dissemination funds to exemplary programs, called Developer Demonstrator projects, for two purposes: (1) to make public and nonpublic schools, colleges, and other institutions aware of what they offer and (2) to provide training, materials, and followup assistance to schools and others that want to adopt them.

NDN also provides funds to State facilitators, whose job is to serve as matchmakers between NDN programs and schools and organizations that could benefit from adopting the programs.
NDN program directors help local schools implement their programs to suit each school’s unique needs. To do that, the director of the program provides training, lasting from one day to a week or more, to staff members in the adopting school. The director also provides followup assistance in the form of additional training, visits, telephone consultation, and newsletters. Sometimes, a program director or a State facilitator arranges for all adopters of a particular program in a region or State to form a network so they can share successful approaches and solve common problems. All NDN services are provided at little or no cost to adopters.

Before a program can become eligible for funding as a part of the NDN, it must be approved by the Department of Education. A program requesting a review must provide evaluation data that prove that the program is effective in the school in which it was developed or field tested, and that it could be used successfully in other schools. As of December 1987, approximately 450 programs had been approved and 82 of them were receiving Federal dissemination funds to help other schools adopt them.

NDN programs can meet the needs of students of every age—preschool through adult—and the needs of teachers, administrators, and other school personnel. Subject areas represented among the NDN programs include mathematics, science, and reading. There are also programs in writing, technology, the humanities, and for gifted and talented students.

Some programs are designed to improve preservice and inservice teacher training. Other fields represented include special education, career and vocational education, adult literacy, early childhood education, health and physical education. Some programs are directed toward processes to improve school administration and management and thereby improve instruction. There are currently some 15 health and physical education programs in NDN.

Drug-Free Schools and Communities: Drug-Free School Recognition Program

Areas of Emphasis

- Health Education
  Information

  Subject Matter: Alcohol or other drugs

Target Groups

- Students
  Elementary
  Middle school/junior high
  High school
- Parents
- Faculty and Staff
- Community

Program Profile

The Drug-Free School Recognition Program operates in a manner similar to the department’s Blue Ribbon Schools. Applications from nominated schools are reviewed by a panel of specialists, and those rated as most promising are each visited by a two-person team. The schools finally selected for recognition are honored at ceremonies in Washington, DC. One hundred and eighty-six schools have been recognized since the program began in 1987.

The program operates under the authority of the Drug-Free Schools and Communities Act, P.L. 99-570, P.L. 100-297, and P.L. 101-226, with funding from the Department’s Federal Activities funds.

Program Profile

This program, authorized by the Anti-Drug Abuse Act of 1988 will support the development of drug abuse education and prevention curricula, programs, and training materials for use in early childhood education. Under this project the Department of Education will support contracts to develop prevention materials for young children and their parents and caregivers. Once developed, these materials will be widely disseminated.

This program operates under the authority of the Anti-Drug Abuse Act of 1988 with $1,000,000 funding from the Department of Education's Federal Activities Budget between FY89 and FY94.

- **Community**

Program Profile

The purpose of this program is to provide financial assistance to States and local education agencies for alcohol and drug abuse education and prevention programs.

This is a formula grant program which allocates funds to States taking into account school-age population and Chapter 1 funding. Each State's allocation is divided between the State Educational Agency (SEA) and the Office of the Governor. SEA must allot at least 90 percent of the funds it receives to local educational agencies to improve anti-drug abuse education, prevention, early intervention, and rehabilitation referral programs. The Governor provides financial support for anti-drug abuse efforts to parents' groups, community-based organizations, or other public or private nonprofit entities. At least 42.5 percent of the Governor's funds must be used for programs for high-risk youth, 10 percent for Drug Abuse Resistance Education Programs, and 5 percent for the Replication of Successful Drug Education Programs. There are contacts in each State for the programs funded through the Governor's office and programs funded through SEA.

Drug-Free Schools and Communities: Emergency Grants

Areas of Emphasis

• Comprehensive range of prevention services related to alcohol and other drugs

Target Groups

• Students
  Elementary
  Middle school/junior high
  High school

• Parents
• Faculty and Staff
• Out-of-School, High-Risk Youth
• Community

Program Profile

This program provides funds to school districts that demonstrate a significant need for additional assistance in combatting drug and alcohol use. The program was administered by Governors under the Drug-Free Schools and Communities Act State grants authority in 1990 and as a Federal discretionary program beginning in 1991. In 1991, districts competed for funding to support a comprehensive range of services, including educational programs, counseling programs, enhancement of school security, after-school programs, programs for parents and other community outreach efforts, and alternative programs for students with a history of drug abuse or others who are difficult to reach in the regular school setting. Grants ranged from $100,000 to $1,000,000.

The program is authorized under P.L. 101-226.

Areas of Emphasis

- Health Education
  Curricula
  Program strategies, approaches, media

Subject Matter:
Alcohol or other drugs

Target Groups

- Students
  Elementary
  Middle school/junior high

- Community

Program Profile

This program, authorized by the Anti-Drug Abuse Act of 1988, funds projects to develop materials for programs of alcohol abuse education. The materials will be targeted to particularly benefit students in grades 5 through 8 and will focus on the effect of alcoholism on families and especially on children of alcoholics. In FY91, funds for this program supported grants to train educators about the special problems such children may have and to use the materials developed from the first year of funding.

Program Profile

The Hawaiian Natives Program provides funds to organizations recognized by the Governor of Hawaii for drug programs benefiting Hawaiian native children and adults.

The authority for the program is Section 5134 of the Drug-Free Schools and Communities Act of 1986, as amended.
Since the program's inception, the Governor has chosen one applicant for the grant, the Kamehameha Schools. The grantee provides training, curriculum development, and other drug prevention activities for Hawaiian native children and adults.

- Health Education
  - Information
  - Personnel training
  - Program strategies, approaches, media

Subject Matter:
Alcohol or other drugs

Target Groups

- Parents
- Faculty and Staff
- Community
- Inner City Team Training

Program Profile

Under the Regional Centers Program, the Department of Education awarded five cooperative agreements in FY90 for four years to fulfill the requirements of the act. The law authorizes the department to support these regional centers to: (1) train school teams to assess and combat drug and alcohol abuse problems, (2) assist State educational agencies in coordinating and strengthening alcohol and drug abuse education and prevention programs, (3) assist local educational agencies and institutions of higher education in developing training programs for educational personnel, and (4) evaluate and disseminate information on effective substance abuse prevention education programs and strategies.

A portion of the funds under the Regional Centers Program has been set aside for a project to provide support to the five regional centers in carrying out their responsibilities. Activities for this project include collecting and disseminating information on regional center activities, collecting and disseminating information on model alcohol and drug education and prevention activities, and coordinating and supporting national workshops and conferences.

Drug-Free Schools and Communities: Federal Activities Grants

Areas of Emphasis

- Health Education
  Curricula
  Program strategies, approaches, media

  **Subject Matter:**
  Alcohol or other drugs

Target Groups

- Students
  Elementary
  Middle school/junior high
  High school

- Parents
- Faculty and Staff
- Community

Program Profile

Funding for this program comes from discretionary funds provided to implement Section 5132 of the Drug-Free Schools and Communities Act.

Drug-Free Schools and Communities Staff in the Office of Elementary and Secondary Education under its Federal Activities Grant Program supports model program development, dissemination, technical assistance, and curriculum development activities for drug and alcohol abuse education and prevention. Over one hundred and fifty awards have been made since FY87 to State educational agencies; local educational agencies; institutions of higher education; and other nonprofit agencies, organizations, and institutions.

Materials

- *Say No To Crack* (Informational poster for elementary school students featuring McGruff)
- *Crack Shatters Lives* (Poster for high school students)

*Programs and Activities—47*
• **Steroids Mean Trouble** (Poster for junior and senior high school students)
• **Growing Up Drug Free—A Parent's Guide to Drug Prevention** (Booklet that helps parents understand the important role they play in preventing youth alcohol and other drug use. Includes information on activities that parents may use in talking with their children about drug use)
• **How To Say No** (Poster for students aged 8 to 12)
• **Schools Without Drugs** (Pamphlet that provides the latest information to educators and other members of the community about alcohol and other drugs and their effects, as well as examples of school-based prevention programs that have successfully combatted student alcohol and drug use)
• **Drug Prevention Curricula: A Guide to Selection and Implementation** (Booklet that provides information to parents, community leaders, and educators about selecting and implementing alcohol and other drug prevention curricula for school-based prevention programs)
• **Learning to Live Drug Free: A Curriculum Model for Prevention** (A flexible framework for classroom-based prevention efforts in kindergarten through grade 12, this publication provides lesson plans and teacher information. The curriculum model includes prevention lessons that can be taught in social studies, language arts, science, mathematics, health and physical education, art or music classes)

Counselor Training Grants

Areas of Emphasis

- Health Education
  Personnel training

- Health Services
  School nursing  Counseling/mental health

Target Groups

- State and Local Education Agencies
- Institutions of Higher Education
- Nonprofit Agencies

Program Profile

This program provides financial assistance to State education agencies, local education agencies, institutions of higher education, or consortia of those agencies or institutions, to establish, expand, or enhance programs and activities for the training of counselors, social workers, psychologists, or nurses who are providing or will provide drug abuse prevention, counseling, or referral services in elementary and secondary schools. The Secretary of Education may also make a grant under this program to any private nonprofit agency that has an agreement with a local educational agency to provide training in drug abuse counseling for individuals willing to provide counseling to schools for a local educational agency.

FY91 was the first year of this competition. Funding for these grants is estimated to be $4,155,000 in FY91 and $3,400,000 in FY92, with individual grants ranging from $50,000 to $100,000.

Migrant Education Programs

Areas of Emphasis
- Health Services
- Nutrition

Target Groups
- Migrant Students

Program Profile
Migrant farmworkers and their families are an especially high-risk, hard-to-reach population. They are often subject to extreme poverty, malnutrition, unsanitary and crowded living conditions, and poor health care. The mobile nature of the migrant family also makes it difficult to ensure the education of migrant children. Compounding these problems are barriers that limit access to available services such as lack of transportation, language barriers, lack of information about available services, and the disruption due to frequent moves. It is important for this special population to have access to ongoing health care, proper nutrition, and economic and educational opportunities.

Several programs of the Office of Migrant Education address these issues.

The Part A, Section 1201 State Basic Grant Program is authorized under Chapter I of Title I of the Elementary and Secondary School Improvement Act of 1965 as amended by the 1988 Hawkins-Stafford School Improvement Act. This program provides funds to State educational agencies (SEAs) for compensatory education services to children of migrant agricultural workers and fishermen. In addition, health, nutrition, and psychological services; prevocational training and counseling; and other instructional programs in language arts may be funded.

Under Part B of Section 1201 of the Act, the Migrant Student Record Transfer System is authorized. This is a national computerized system operated by the Arkansas State Department of Education that receives, stores, and transmits educational and health data on migrant students who move from school district to school district.

The High School Equivalency Program (HEP) and the College Assistance Migrant Program (CAMP) are authorized under Title VI of the Higher Education Act. These programs provide funds to institutions of higher education (IHE) or private nonprofit organizations collaborating with IHE's for special educational programs designed for students who are, or whose parents are, engaged in migrant and other seasonal farmwork. The projects funded under HEP recruit and provide academic support services (including counseling, health services, stipends, and placement) to migrant students aged 17 and above to assist them to obtain a high school equivalency certificate and subsequently to gain employment. CAMP is designed to assist migrant students who are enrolled or are admitted for enrollment on a full-time basis in the first academic year at an IHE. This assistance includes outreach and recruitment, housing support, instructional support, financial aid, and other support services such as necessary health services and tutoring.

Programs and Activities—51
Migrant Education Coordination Programs for SEAs are created under Section 1203 of the Act. These programs are designed to provide financial assistance to SEAs for projects designed to improve interstate and intrastate coordination of migrant education activities among SEAs and local educational agencies. Many of the programs funded under this section include a component on health education or plans to improve provision and access of health services to migrant children and their families.

The Migrant Education Even Start (MEES) program supports grants to eligible SEAs for the cost of providing family-centered education projects to help parents of currently migratory children become full partners in the education of their children, to assist currently migratory children in reaching their potential as learners, and to provide literacy training for their parents. Parent education includes information on the health and nutrition needs of children and the services available to eligible families in the State or locality.

Rehabilitation Research and Training Center
for Children’s Mental Health

Areas of Emphasis

• Health Services
  Counseling/mental health

• Research and Training

Target Groups

• Students
  Students with special needs/special education

Program Profile

Administered by the National Institute on Disability and Rehabilitation Research, this program is authorized under the Rehabilitation Act of 1973, as amended, to improve the delivery of services to children and adolescents with severe emotional disorders.

The purpose of this center is to conduct research and training that will improve the delivery of services to children and adolescents who have serious emotional disorders. The philosophy of the center is that systems of coordinated, community-based care are needed for this population of children and that these systems should be based on a clear set of values, develop a strong, empirically derived data base, and include the families of the children and the professionals from the multiple service systems that serve them, including the schools.

Hearing Screening and Follow-up Program for Native Hawaiian Children

Areas of Emphasis

- Health Services Screening
- Research and Demonstration

Target Groups

- Students
  - Student with special needs/special education

Program Profile

Administered by the National Institute on Disability and Rehabilitation Research, this program is authorized under the Rehabilitation Act of 1973, as amended, to provide hearing screening of native Hawaiian children and follow the children audiologically. The children experience intermittent hearing losses, largely due to middle ear infections. The project will document hearing dysfunction, investigate etiological relationships, and study the relationship of hearing loss and audiological interventions to educational outcomes.

Program Profile

The Prevention Research Branch, Division of Clinical Research, National Institute of Mental Health funds research and research training on the prevention of mental disorders and the promotion of mental health. Included are studies of preventive intervention strategies which avoid or interrupt the development of dysfunctional conditions and/or improve individual adaptive capabilities. Research aimed at changing factors that place people at risk for mental disorders is supported, as are methodological studies especially relevant to preventive intervention research. Support is provided through a wide variety of research and research training mechanisms, and in FY90 totals approximately $16.7 million.
Priority areas of interest to the branch are:

- The prevention of socio-emotional problems among preschoolers
- The prevention of conduct and other behavioral disorders in school-aged children
- The prevention of anxiety and depressive disorders in all ages
- The promotion of mental health through the enhancement of protective factors, including coping skills
- The prevention of suicide and suicidality in preclinical populations
- The prevention of affective and anxiety disorders in HIV-infected individuals, people at high risk for infection, their families, caretakers, and loved ones

Areas of Emphasis

- Health Services
  Delivery of mental health services by States and communities

- Interagency collaborative approaches to coordination of community-based services to meet the needs of children and adolescents with serious emotional disturbances and their families; mental health service delivery

Target Groups

- Students
  Students with special needs/special education

- Parents

- Out-of-School, High-Risk Youth

- Community

Program Profile

The legislative authority for the Child and Adolescent Service System Program (CASSP) is the mental health component of P.L. 100-960, Anti-Drug Abuse Act of 1988, Title II, Treatment and Prevention Programs, Section 520A (a).

CASSP is designed to improve systems for service delivery for children and adolescents with severe emotional disturbance, the primary goal of which is to improve and integrate the way diverse services are delivered to this population by States and communities. CASSP encourages the interagency coordination and planning of services as well as the development of a stronger mental health component within the broader child serving system. CASSP, through its Research and Training Centers and its Technical Assistance Center, pulls together the best research in the areas of concern and makes it available to service system administrators. Through State and community grant programs, CASSP then promotes the utilization of this research in the development of State-wide service system improvement strategies, and is included in the planning and development of new services and programs. CASSP requires that newly developed strategies and services be culturally sensitive to the needs of minority children and youth and that these populations participate in all aspects of service system development. Moreover, families of children and adolescents with severe emotional disturbance are included in the planning and implementation of service systems.
Currently in its seventh year, CASSP is, or has been, active in all 50 States, the Virgin Islands and the District of Columbia. It also cofunds two Research and Training Centers with the Department of Education’s National Institute of Disability and Rehabilitation Research and cofunds a Technical Assistance Center with the Maternal and Child Health Bureau, Health Resources and Services Administration. The FY92 emphasis will be on the continuation of the State-level CASSP effort.

The Child and Adolescent Research Demonstration Program is the newest of the Child and Family Support Branch (CFSB) programs and represents a logical extension of the current CASSP efforts in service system development. The goal of this program is to support research on the efficacy of innovative service delivery approaches and systems of care for children and adolescent with, or at risk of, serious emotional disturbance and their families. The first grant announcements, issued in FY90, focused on: (1) the study of the expansion of State-level system developments to the local level; (2) the study of the impact of ongoing community-level service system development efforts funded by States and other sources; and (3) the study of the development of comprehensive services for homeless adolescents. To enhance the success of these projects, a strong emphasis has been placed on the formation of meaningful collaborations between university-based researchers and public policymakers in keeping with the 1988 National Institute of Mental Health Public-Academic Liaison Initiative. As a result of those announcements, several fundable R18 grants were produced and five have recently been awarded with the assistance of funds tapped for homeless demonstrations. CFSB is currently revising this successful request for application for future release.

Evaluating Sexual Abuse Prevention Program

Areas of Emphasis

- Health Education
  
  Subject Matter:  
  Injuries/safety

- Prevention Program—Child Sexual Abuse

Target Groups

- Students  
  Preschool

Program Profile

This program in the Violence and Traumatic Stress Research Branch in the Division of Applied and Services Research in the National Institute of Mental Health (NIMH), Alcohol, Drug Abuse, and Mental Health Administration (ADAMHA), administers grants in many areas of violent behavior, including sexual abuse in children.

The grant, "Evaluating Sexual Abuse Prevention Program" is a school-based, sexual abuse prevention program for preschool children. The principal investigator, Sandy K. Wurtele, is an assistant professor in the Department of Psychology at the University of Colorado at Colorado Springs.

This research has been funded by NIMH over a period of four years and is now in the fifth year. The study is investigating (1) the effectiveness of school-based, sexual abuse prevention programs for preschool children in developing knowledge which would enable children to reduce the risk of sexual victimization and (2) the potential negative consequences of participation in such programs.

Dr. Wurtele has written various journal articles and has completed both a study replicating results of earlier research comparing the "touch continuum" approach with the "private parts" approach with five-year-old children and a study evaluating the "private parts" approach with four-year-old children.

  *Subject Matter:*
  Prevention/intervention
  Sexual abuse

---

**Program Profile**

This program identifies four currently-funded projects relevant to school health.

**Behavioral Treatment of Stress in Pediatric Patients.** Research has shown behavioral interventions to be effective in reducing stress and mitigating other problems experienced by children and adolescents undergoing medical treatment. However, the information needed to carry out these interventions in clinical setting is often not accessible to direct care providers. Phase II of this study will develop, evaluate, and refine eight video-based informational modules designed to (1) stimulate interest in behavioral solutions to problems in pediatrics and (2) encourage reproduction of procedures that have proven successful. These programs will focus on behavioral research in the areas of AIDS, ambulatory pediatrics, asthma, cancer, diabetes, obesity, pain control, and preparation for surgery. Each module will consist of a videotape and a printed user's guide and will be widely marketed in the United States and Canada to nurses, social workers, psychologists, pediatricians, educators, and professional groups interested in issues in children's health. The eight educational video modules developed under Phase II will be widely marketed to health professionals in the United States, Canada, and the United Kingdom by Carle Medical Communications in Urbana, IL. Additionally, it will be marketed to all groups interested in children's health.

**Adolescent Problems: Prevention and Intervention.** The purpose of the project is to develop, field test, and refine a media-based family program to promote healthy adolescent adjustment. The development of the program will be informed by findings from two decades of National Institute of Mental Health-funded research. Parent/adolescent skills will be the focus of videotapes and manuals that could be used (1) in prevention trials with large samples of unselected or at-risk families and (2) as adjunct materials for clinicians to use in treating disturbed families. Targeted consumers for post-small business innovation research funding will be parents, public school districts, family practice physicians, mental health specialists, and universities.

In Phase I, one module, a videotape and accompanying brochure designed to improve specific academic skills for adolescents in middle school will be produced and pilot tested. Pre- and postintervention data from parents, teachers, youngsters, and school records will be evaluated for experimental and control groups. Homework practices and quality, on-task classroom behavior, grades, attendance, discipline contacts, and child life skills will serve as dependent variables. Consumer satisfaction will also be evaluated.

---

*Programs and Activities—67*
In Phase II, additional and related modules will be developed and pilot tested, and finally, the set of modules will be field tested. Modules will focus on probable determinants for adolescents' involvement with deviant peer groups, substance abuse, delinquency, and depression. The set of materials will be developed and field tested with unselected, at-risk, and clinical populations referred because of school failure, antisocial behavior, substance abuse, peer problems, or depression. Potential commercial applications are planned for parents, public school districts, mental health specialists and facilities, universities, and home video cassette markets.

Video-based Skills for Urban Families. The project plans to develop a set of video-based skill programs for parents and young adolescents (11-14). The programs will adapt social learning parenting and teen behavior change skills to fit the ecological and interpersonal situations of ethnically diverse urban families. Two urban consultation teams comprised of parents, teens, and community leaders will assist in developing the programs.

In Phase I, a parent tape teaching the skills of monitoring and supervising child behavior outside of the home, and an adolescent tape teaching the skills of handling pressure to engage in various antisocial behaviors will be developed and evaluated in Portland, OR. A consultation team will provide direction and feedback. Forty families will be recruited and their acquisition of targeted skills evaluated after two weeks. Subjects will also provide consumer satisfaction ratings.

During Phase II, the complete set of 6 parent and 6 adolescent video programs will be developed. A second urban site will be targeted and a consultation team formed. One hundred and twenty at-risk middle school youth and their parents will be recruited to evaluate the complete package. Markets for these complete packages will be explored and contacts established for eventual distribution of the program. The targeted consumers for these packages include: schools, community mental health facilities, churches, youth organizations, and parents.

Computer-Assisted Interviewing for Child Sexual Abuse. This project will develop an interactive-multimedia computer program to aid in interviewing children ages 3-8 to ascertain sexual abuse. The program will assist the interviewer by providing a framework for the interview and an environment that helps the child tell her or his story. It will also provide questions, suggestions, and in-service training for the interviewer. The program will provide separate modes appropriate for different developmental levels of the children within the target age range.

Interactive-multimedia programs communicate with animation, graphics, and sound, in addition to text. Even very young children who don’t know how to read or use a keyboard can operate these easy-to-use programs. This technology will yield more information than traditional interviewing techniques, because it facilitates the child’s nonverbal modes of communication and mitigates the child’s distraction. In addition, interviewers from different disciplines will be able to utilize the technology’s hypertext feature to select questions based on their specific needs and on the progress of the individual interview. The program is expected to reduce the number of interviews and therefore the stress on the child. Potential users include agencies and individuals that interview children to ascertain sexual abuse, such as mental health and legal professionals.

  Middle school/junior high  
  High school

Program Profile

Launched in July 1990, the new National Institute on Drug Abuse drug abuse and AIDS prevention campaign, cosponsored by the Advertising Council, Inc., consists of television, film, radio, and print public service announcements that explain the relationship among drugs, sex, and AIDS. The first phase is aimed at 12-16 year olds who may be encountering their first exposure to both drugs and sex. The aim of the campaign is to convince teenagers that the use of any drug, including alcohol, marijuana, and cocaine, can put them at risk to HIV transmission through risky sexual behavior.

- **Community**

Program Profile

The National Institute on Drug Abuse (NIDA) drug abuse prevention research program promotes rigorous scientific study of individual and multiple component substance abuse prevention strategies focused upon schools, families, peer/friendship networks, the workplace, and local neighborhoods to determine their efficacy to prevent the onset of drug use and progression to abuse. Studies involve the use of randomized controlled clinical trials or well-controlled quasi-experimental research designs. A second goal of prevention research is to improve research methodology. Across all areas of study, special attention is given to populations at high risk of drug abuse. In general, drug prevention studies encompass a broad spectrum of specific and polydrug behaviors, such as the use of tobacco products, alcohol, marijuana, cocaine/crack, methamphetamines, etc. This program is authorized under Sections 301 and 515 of the Public Health Service Act (42 USC 241 and 290cc).

The Prevention Research Branch, Division of Epidemiology and Prevention Research has a budget for FY91 of $18 million dollars with approximately one half of these funds devoted to etiologic research and half to prevention intervention research. The program supports approximately 50 research grants to include specific research study grants, research centers, and research training awards.
Because of the vital importance of epidemiologic research, NIDA has expanded its National High School Senior Survey of Drug Abuse to both the eight and tenth grade. It is estimated that in 1991, approximately 16,000 students from each of these grades will be surveyed for the use of licit and illicit drugs.

NIDA supports controlled research of a variety of individual drug prevention programs. An assessment of this body of research through the use of meta-analysis techniques indicates that school-based drug education programs that include peer resistance training and positive peer role models are effective in reducing the use of alcohol, cigarettes, and marijuana and that alternative prevention programs appear to be effective with high-risk youth. Prevention research is supported to test the effects of preventive strategies for developing and maintaining: (1) behavior skills, such as self-monitoring, goal setting, self-incentives; (2) cognitive structures, such as self-efficacy and intrinsic motivation; (3) perceptions of the harmful consequences of drug use/abuse; (4) awareness of personal and social disapproval of drug use/abuse; (5) affective/emotive impulse controls; (6) heightened concentration skills; and (7) increased interpersonal skills.

The Prevention Research Branch currently funds research studies under two research program announcements. The first program announcement is titled "School-based Prevention Intervention Research" and supports research to determine the efficacy of school-based drug education programs. The second program announcement is titled "Comprehensive Prevention Research in Drug Abuse" and supports research to assess the efficacy of multiple component prevention intervention programs that focus upon the individual, family, school, workplace, and community.

- HIV/AIDS as it relates to alcohol and other drugs
- Tobacco
- Life skills

Target Groups

- **Students**
  - Middle school/junior high
  - High school

- **Out-of-School, High-Risk Youth**

Program Profile

Implemented by the American Medical Student Association, this model will use over 700 medical student volunteers across the Nation who will interact and train disadvantaged youth in keeping a healthy lifestyle and will teach them alternatives to high-risk behavior which could lead to alcohol and other drug problems. The medical students serve as teachers, role models, and mentors to the youth. Youth will be found in junior and senior high schools, homeless shelters, and runaway homes.

  - Preschool

- **Parents**

- **Faculty and Staff**

Program Profile

This project will help families with very young children make changes that will protect them from societal and other pressures to use alcohol and other drugs. Head Start staff, as well as parents and pre-school children, are targeted with education and training materials developed to prevent alcohol and other drug problems. The program aims to break the transgenerational cycle of drug dependency among high-risk families.

- Community
- Resource Organizations Working with Youth or Related Issues

Program Profile

The Office for Substance Abuse Prevention (OSAP) National Learning Community is comprised of a network of OSAP grantees; researchers; foundations; policy makers; prevention advocacy groups; health practitioners; and relevant Federal, State, and local government authorities. These people work together and in their separate settings to quickly pass along new materials, research findings, prevention curricula, and evaluation strategies. Also, they provide support to one another in their efforts to reduce the vulnerability to substance abuse and other negative outcomes among high-risk youth and their families. The issues relating to high-risk youth are addressed in various settings, including the home and community, and in primary, middle, and high schools.

Materials

- OSAP High Risk Youth Update (a quarterly report that transmits new findings and concerns to The Learning Community regarding alcohol and other drugs; HIV/AIDS)
- Cultural Enhancements; Parenting; AIDS; Co-morbidity (pamphlets)

Program Profile

The Anti-Drug Abuse Act of 1986 (P.L. 99-570) established the Office of Substance Abuse Prevention (OSAP) within the Alcohol, Drug Abuse, and Mental Health Administration and authorized the Director of OSAP to support a demonstration grant program that funds projects that focus on substance abuse prevention among high-risk youth. Since its inception in FY87, the High-Risk Youth program has funded 263 new projects at $60.6 million and 226 continuations at $48.6 million for a total of $109.2 million.
The High-Risk Youth Program Announcement seeks grant proposals that (1) test the feasibility of implementing previously untested innovative prevention strategies that hold great promise for expanding our repertoire of strategies and interventions in the prevention of alcohol and other drug abuse among high-risk youth populations; or (2) assess the program effectiveness, replicability, and generalizability of knowledge-based, established strategies for the prevention of alcohol and other drug use among high-risk youth populations, including those derived from previous OSAP experience but not systematically evaluated.

The Anti-Drug Abuse Act defines high-risk youth as "any individual who has not attained the age of 21 years, who is at high risk of becoming, or who has become a drug or an alcohol abuser, and who is identified as a child of a substance abuser; is a victim of physical, sexual, or physiological abuse; has dropped out of school; has become pregnant; is economically disadvantaged; has committed a violent or delinquent act; has experienced mental health problems; has attempted suicide; has experienced long-term physical pain due to injury; or has experienced chronic failure in school." This list is not exhaustive and is not intended to exclude other documented high-risk groups.

Program Profile

In 1987, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) began working directly with State and local departments of education to enable them to help schools and other agencies that serve youth to implement programs to prevent HIV infection and other important health problems. Currently, CDC provides fiscal support and technical assistance to every State education agency, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, Guam, the U.S. Virgin Islands, and the 16 local education agencies that serve cities with the highest number of reported AIDS cases.

Each funded education agency is carrying out core program activities that include (1) developing education policies, (2) training teachers and other school personnel, (3) developing and disseminating materials, (4) monitoring the prevalence of student risk behaviors and the status of HIV education in its jurisdiction, and (5) evaluating the impact of its program.
Materials

State and local education agencies funded by the Division of Adolescent and School Health have developed HIV-related policies, curriculum guides, and teaching materials. These materials are described in the AIDS School Health Education Database (as discussed under Information Development and Dissemination System).

Program Profile

Since 1987, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) has supported the development and dissemination of state-of-the-art information that can be used to increase the effectiveness of HIV prevention education. To help disseminate HIV education information, CDC added the AIDS School Health Education Subfile to the U.S. Public Health Service's Combined Health Information Database. This subfile currently contains abstracts of more than 700 HIV education materials including HIV education policies, teacher training programs, films and filmstrips, brochures, journal articles, and reports. Each entry includes information about how to acquire the material described. New abstracts are added every three months, and they can be accessed using a computer with a modem (Contact MAXWELL ONLINE, BRS Information Technologies Division, 1200 Route 7, Latham, New York, 12110, 800/289-4277 for information regarding access.).

CDC awarded a contract for the Education Development Center to develop HIV prevention education materials that could be integrated within the two comprehensive school health education curricula most widely used in the United States: *Growing Healthy*, for elementary school students, and the *Teenage Health Teaching Modules*, for secondary school students.

*Programs and Activities—87*
CDC also plans and implements national and regional conferences for representatives of national, State, and local health and education agencies in the public and private sectors. For the past three years, the Division of Adolescent and School Health and the Society of State Directors of Health, Physical Education, and Recreation have sponsored an annual conference on school health leadership in State departments of education. This conference is convened simultaneously with a conference cosponsored by the Association of State and Territorial Directors of Public Health Education. The conference allows State departments of education and health to collaboratively plan efforts for improving HIV education within more comprehensive school health programs.

Materials

In 1987, CDC worked with representatives from many national, State, local, and Federal organizations and agencies to develop *Guidelines for Effective School Health Education to Prevent the Spread of AIDS*. The guidelines provide recommendations for planning HIV education programs, preparing education personnel, establishing teacher qualifications, defining the purpose of HIV education, determining essential content for specific grade levels, estimating curriculum time and resources, and assessing programs.

Program Profile

In 1987, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) established three training and demonstration centers to help teams from State and local agencies responsible for school or community-based health education implement state-of-the-art HIV prevention education for youth. Two centers focus on State-level training programs, and one center addresses the needs of teams from local jurisdictions.

The Michigan Department of Education and the New York Department of Education each conduct training programs that focus on activities that can be undertaken by State education agencies and other State-level organizations. They use experiences from their own programs to demonstrate successes and mistakes. The training sessions also address issues essential to effective HIV education, including integrating HIV education into comprehensive school health education and engaging parents and the community in HIV education.

Programs and Activities—89
The training center conducted by the San Francisco Unified School District trains professionals who work with youth in cities across the Nation. A community-wide approach to HIV prevention for youth, both in and out of school, is emphasized. Cities are invited to send teams which generally include a school-district administrator, two school-district staff involved in teacher training, one school board member or parent, and two representatives from agencies or programs serving populations of youth who are potentially at high risk for HIV infection. Team building and collaboration are stressed.

In September 1989, CDC worked with the Education Development Center (EDC) to establish training centers in 13 States that would train teachers to implement comprehensive school health education that included education to prevent HIV infection. Since then, these centers have trained more than 12,000 teachers from more than 1,000 school districts. In 1990, the U.S. Senate appropriations report directed CDC to support "... a comprehensive approach to health education in the schools including AIDS, IV drug abuse, sexually transmitted diseases, cancer prevention, and heart health, to name a few...[by establishing]...30 new regional teacher training centers focused on comprehensive school health education." CDC then established a Comprehensive School Health Education Teacher Training Center at 13 additional sites. Currently, there are 24 training centers in 23 States. CDC and EDC plan to establish a teacher training center in every State.

Cardiovascular health
Nutrition
Family life

Target Groups

Students
High school

Faculty and Staff

Program Profile

To identify priority health-risk behaviors, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) examined the leading causes of mortality, morbidity, and social problems among youth and adults. Six categories of health-risk behaviors were identified: (1) behaviors that result in intentional and unintentional injuries; (2) tobacco use; (3) drug and alcohol use; (4) sexual behaviors that result in HIV infection, sexually transmitted diseases, and unintended pregnancy; (5) dietary behaviors; and (6) physical activity. In 1990, the Youth Risk Behavior Surveillance System (YRBSS) was established to monitor the incidence and prevalence of priority high-risk behaviors in each category.

In spring 1990, 35 States and 8 cities implemented YRBSS with representative samples of high school students. At the same time, CDC also implemented a national school-based survey with a nationally representative sample of high school students. This survey provides national data against which State and local surveys can be compared. In 1992, CDC plans to add a Youth Risk Behavior Supplement to the National Health Interview Survey to compare the prevalence of risk behavior among school students, drop-outs, college students, and college-age youth who do not attend college. Results from the national, State, and local surveys are being used to plan and evaluate comprehensive school health education programs and other interventions to reduce these priority health-risk behaviors among youth. National, State, and local data will also be used to monitor 24 of

Programs and Activities—91
the national health promotion and disease prevention objectives for the year 2000. A detailed report of the process used to develop the YRBSS priority behaviors to be measured in each categorical area, the rationale for selecting each behavior, and the results from the first year of implementation will be published.

The surveillance system has two components. The first is designed to regularly measure priority health-risk behaviors among adolescents.

The secondary surveillance system assesses the extent to which HIV education is being implemented. Each of the 71 State and local education agencies supported by CDC is encouraged to collect information regularly about the percentage of students receiving HIV education, of schools providing HIV education, and of schools providing HIV education within comprehensive school health education.

A survey to measure district requirements for HIV education and comprehensive school health education among a representative sample of the nation's 16,000 school districts was conducted by the National School Boards Associations (NSBA) during spring 1989. NSBA and the American Association of School Administrators repeated the survey with a national probability sample of school districts in the spring of 1990. These results will be published after data analysis is completed. The Council of Chief State School Officers and the National Association of State Boards of Education conduct surveys to measure State-level policies related to HIV and comprehensive school health education.

CDC provides technical assistance to State and local education agencies to help improve the quality of the data collected. Technical assistance, provided by DASH and Westat, Inc., includes site visits, phone consultation, specialized computer software, workshops, and survey handbooks. The handbooks contain information on obtaining clearance for survey instruments, using sampling techniques, contacting parents, administering surveys, analyzing data, and using results. Computer programs were developed to help State and local education agencies draw probability samples of schools and students within schools.

  HIV/AIDS prevention
  education program
  evaluation

Subject Matter:
Comprehensive health education
HIV/AIDS

Target Groups

- Faculty and Staff
- School Administrators

Program Profile

The purpose of the Division of Adolescent and School Health evaluation system is to evaluate the effectiveness of HIV education programs and is designed to help State and local education agencies evaluate and improve the quality of their programs. In 1988, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) awarded a contract to IOX Assessment Associates, a private research firm in Los Angeles, to support these evaluation technical assistance activities.

Since 1988, CDC has sponsored workshops to help State and local education agencies plan evaluations of their HIV education programs. Representatives from funded agencies learn how to apply principles of behavioral epidemiology, collect process and outcome data, measure sensitive behaviors, select an appropriate evaluation design, and report results.

In 1989, CDC began providing additional program evaluation technical assistance to the Michigan, New York State, and San Francisco departments of education. CDC also helped the training and demonstration centers at these locations provide help to teams from other States and cities in evaluating their own programs.

In Fall 1990, CDC and IOX conducted a one-day site visit to each of 30 departments of education to discuss program goals and objectives and determine evaluation priorities. After each visit, IOX staff developed an individualized evaluation plan for each site. Each site is currently implementing its plan, which will result in an annual evaluation report.

Beginning in spring 1991, CDC began to provide continuing technical assistance to 15 State and local education agencies to help them further develop and implement plans for evaluating their HIV education programs. Technical assistance is provided through site visits and telephone consultation and may continue over several

Programs and Activities—93
years. Specific assistance includes identification of evaluation activities to enhance programmatic decisions; selection and implementation of data-gathering processes; identification, modification, or generation of assessment instruments; data analysis techniques; and reporting strategies.

CDC is developing a series of evaluation materials that include evaluation guidelines and measures to assess HIV education policies, teacher training, curricula, and student outcomes. A training program that provides assistance in using these materials will be made available to all State and funded local education agencies after summer 1991.

IOX and CDC are also developing four reports that summarize the literature about specific behaviors that place adolescents at risk for HIV infection; demographic, cognitive, social, and environmental determinants of such behaviors; essential elements of effective school-based HIV prevention programs; and a proposed protocol for evaluating such programs. These reports will serve as the basis for planning efficacy studies of school-based HIV prevention programs for the next few years.

- College Students

Program Profile

In 1990, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) awarded a cooperative agreement to a university in each of five States among those with the highest cumulative incidence of AIDS. Each university will establish a consortium of colleges, universities, trade schools, and other agencies in the State to accomplish two primary goals. The first goal is to develop and implement education programs that could prevent the spread of HIV infection and other health problems among college students in the State. The second goal is to provide preservice and in-service training for school administrators and teachers to help implement effective education to prevent HIV infection and other important health problems. The five universities that received support are Illinois State University, Rutgers (the State University of New Jersey), San Diego State University, Southwest Texas State University, and the University of Central Florida. Additional support has been provided to Rutgers and San Diego State University so that each can train teams of personnel from universities in other States who may be interested in establishing such consortia in their own States.

Program Profile

In 1991, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) launched a new initiative to prevent HIV and other important health problems among youth who are at risk for engaging in high-risk behaviors and youth who are outside the mainstream of HIV prevention education. This initiative will help local health departments build, strengthen, and expand their capacity and that of community agencies for providing effective health education to prevent HIV infection and other relevant health problems among these youth. Reaching these youth will require the involvement and support of many community-based organizations. Local health departments will receive fiscal and technical assistance to support the development or expansion of community coalitions of youth-serving agencies. These programs will be initiated in up to three cities with the highest cumulative incidence of AIDS.

#### Program Profile

In 1988, the World Health Organization (WHO) in Geneva established the Division of Health Education (HED) as the focal point for health education in WHO and throughout the world. The Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control (CDC) has worked collaboratively with this new division to develop a school health education infrastructure that can support HIV prevention education in WHO and within countries. A CDC health professional is assigned to WHO in Geneva to collaborate on school health education activities. In addition, CDC has been designated as a WHO Collaborating Center on Health Education and Promotion of School-aged Children and Adolescents.

In 1990, HED organized international efforts to ensure that the important role of health in education and the quality of life was duly noted in the Declaration of the World Conference on Education for All. Efforts are underway in four WHO regions to strengthen national infrastructures for comprehensive school health education and to prepare teachers to implement comprehensive school health education curricula that include HIV prevention education, recommendations, and learning materials for supporting and implementing comprehensive school health education programs.
The collaborative WHO/CDC effort has also established international leadership for supporting these activities. Representatives from UNICEF, UNESCO, UNFPA, USAID, and other organizations will participate in two working sessions called by WHO to identify strategies for promoting and supporting school health education that is more comprehensive.

Program Profile

Since 1987, the Division of Adolescent and School Health of the National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control, has provided fiscal support and technical assistance to national organizations in the private sector and to the Public Health Service's Indian Health Service to enable them to help schools and other organizations that serve youth implement effective HIV education within more comprehensive school health education programs. Program activities typically include (1) conducting training sessions for constituents or target populations, (2) helping State and local agencies and other agencies that serve youth implement appropriate policies, (3) helping State and local education agencies and other agencies that serve youth implement appropriate programs, including programs for minority youth, college students, and youth in high-risk situations, and (4) developing materials. Examples of materials developed under the System of National Organizations are listed under the Materials section.

• School as a Healthy Environment
  Drug free (alcohol and tobacco)

• School and Community Health Promotion

• Physical Education/Fitness/Sports/Recreation

Target Groups

• Students
  Middle school/junior high
  High school

• Faculty and Staff (Athletic Coaches)

Program Profile

Section 3.(a) (40) of P.L. 98-474 requires that the Department of Health and Human Services collect, analyze, and disseminate (through publications, bibliographies, and otherwise) information, studies, and other data relating to the effect of cigarette smoking on human health; develop standards, criteria, and methodologies for improved information programs related to smoking and health; and undertake any other additional information and research activities which the Secretary determines necessary and appropriate to carry out this selection.

Each day approximately 3,000 teenagers in the United States start smoking, over 1 million annually. Smoking by young people clearly represents a major public health problem. The majority of smokers initiate smoking behavior before the age of 20.
Drinking in America begins at increasingly early ages. It is estimated that by the time children are 13 years old, 10 to 25 percent will have tried alcohol. Daily alcohol use by high school seniors has declined during the past several years, however heavy party drinking continues at alarmingly high levels.

This program message focuses on the negative effects of alcohol and tobacco use on athletic performance. Coaches and other high school personnel involved in health and safety education will be called on to deliver this message. The materials that have been developed are very modern in style and approach. While they convey the negative consequences of tobacco and alcohol use, the materials stress the desire to do your best, to be the best, and to have the "Edge."

---

**Materials**

- *The Performance Edge* is a complete educational program that takes a progressive and positive approach to explaining the effects of alcohol and tobacco on athletic performance. The package of materials is free, and it includes a video, a magazine handout for the students, and a guide for teachers and coaches.

Immunization

Areas of Emphasis

- Health Education
  Information

- Health Services
  Immunizations

Target Groups

- Parents

Program Profile

The Division of Immunization, National Center for Prevention Services, Centers for Disease Control provides national direction and leadership, technical assistance and consultation, national surveillance, epidemic aid, and project grant support and conducts research to assist State and local agencies in planning and implementing immunization programs. These programs, which are primarily directed to children, aim to prevent and control measles, rubella, polio, mumps, diphtheria, pertussis, and tetanus, thereby eliminating these diseases as significant public health problems. It also provides support for the purchase of *Haemophilus influenzae* type b vaccine for use in the public sector. In addition, the Division of Immunization provides national leadership and coordination in an initiative to improve immunization levels in adults. It also recently launched an Infant Immunization Initiative aimed at improving our Nation's capacity to deliver childhood vaccines at the appropriate age, particularly to hard to reach populations in large inner-city areas. The division provides technical assistance and collaboration to the World Health Organization's global Expanded Programme on Immunization, the Pan American Health Organization and the U.S. Agency for International Development supported program for Combatting Childhood Communicable Diseases.

Tuberculosis Control

Areas of Emphasis

• Health Education
  Tuberculosis prevention and control

• Health Services
  Screening
  Tuberculosis prevention and control

Target Groups

• Medically underserved/low-income or foreign-born students, faculty, or staff

Program Profile

Following decades of steady decline, tuberculosis (TB) is re-emerging as an important public health problem, especially in certain geographic areas and population groups. Over 22,000 TB cases are reported each year in the United States. In addition, there are an estimated 10 to 15 million people in the United States who are infected with the TB germ, with potential to develop TB disease in the future. Students and staff at high risk include those—or their families—who were born in countries with a high prevalence of TB (primarily Asia, Africa, South America, including foreign exchange students) and/or those who are medically underserved and low-income. Many schools have reported TB outbreaks—involving both students and staff—that could have been prevented with adequate prevention and control measures.

In April 1989, the Department of Health and Human Services’ Advisory Committee for Elimination of TB issued "A Strategic Plan for the Elimination of TB in the United States." Screening high-risk populations and providing appropriate preventive therapy were cited as crucial to achieving the nation’s goal of eliminating TB by the year 2010.

The Centers for Disease Control’s Division of Tuberculosis Elimination provides consultation and technical assistance, as well as training and education materials, to State and large city health department TB control programs regarding appropriate TB screening and prevention methods among high-risk groups.

Schools should contact their State or local health department for assistance in:

• Determining the level of risk of TB among its students and staff and the need for screening
• Planning and implementing TB screening as needed

Programs and Activities—107
• Arranging for the referral and follow up of persons found to have TB infection
• Training school health staff to carry out TB screening
• Provision of education materials to students and staff at high risk

Materials

• *Tuberculosis—Get the Facts* (English/Spanish) (general information, for persons with or at risk for TB)
• *TB Fact Sheet* (general information for health care professionals)
• *Tuberculosis Skin Testing Videotape and Wallchart* (for training)

U.S. Conference of Mayors HIV/AIDS Education Grants

Areas of Emphasis

- Health Education
  Information

  Subject Matter:
  HIV/AIDS

Target Groups

- Students
  High school

- Out-of-School, High-Risk Youth

Program Profile

In cooperation with the U.S. Conference of Mayors, this program funds HIV/AIDS education activities at the community level. Examples of programs funded under this program include:

- A project targeting Latino women, youth, and substance abusers. Activities include HIV/AIDS education and training for service providers and volunteers who assist persons with AIDS.

- A project targeting out-of-school youth in emergency shelters. Activities include providing HIV/AIDS risk-reduction training to at-risk adolescents and training of staff to become HIV/AIDS prevention educators.

- A project targeting runaway and homeless youth. Activities include the development of an AIDS curriculum that will serve to provide structured learning activities for youth clients in temporary shelter.

- A project targeting homeless, runaway, and "throwaway" youth. Activities will include weekly health and HIV/AIDS education sessions and providing HIV prevention education and training to staff members.

- A project targeting gay and lesbian youth, with activities including training of peer counselors to conduct outreach and operate a gay/lesbian youth hotline and HIV prevention education for youth.

- A project targeting at-risk African-American adolescents. Activities include the development of a peer education outreach and HIV/AIDS prevention program.

- A project targeting African-American alcohol and drug abusers, gay and bisexual men, and out-of-school youth. Activities include the use of peer educators to conduct one-on-one intervention and counseling, workshops, and "home-based" presentations.
A project targeting adolescent Haitian women between the ages of 12-20, with activities including providing peer education training and conducting field outreach.

- Faculty and Staff

Program Profile

The National Center for Health Statistics (NCHS) is the principal Federal source of data used in planning health services and other programs that meet the health needs of the Nation. NCHS collects and analyzes data that address the full spectrum of concerns in the health field, including overall health status, lifestyle, and exposure to unhealthful influences; the onset and diagnosis of illness and disability; and the use of health care and rehabilitation. Examples of these activities include the National Health Interview Survey; the 1988 National Maternal and Infant Health Survey; the National Health and Nutrition Examination Survey; the National Ambulatory Medical Care Survey; the National Survey of Family Growth; the Occupation and Industry Mortality Program; and the Linked Birth and Infant Death Record Project.

Materials

NCHS disseminates a wide range of information materials. While many reports are statistical in nature, others contain more text and so are more useful to the general public.

Many of the NCHS surveys touch on areas which may be of interest to the users of this publication. In 1988, NCHS conducted a child health survey and several reports are available in this area. Data on the number of days children miss school as a result of illnesses and injury are available from other NCHS data sources.

The Darker Side of Indoor Tanning Learning Unit

Areas of Emphasis

- Health Education Curricula
  Information

  Subject Matter:
  Injuries/safety  Cancer  Consumer education

Target Groups

- Students
  Middle school/junior high  High school

Program Profile

The Darker Side of Indoor Tanning is a poster-format learning unit prepared by the Food and Drug Administration's (FDA) Center for Devices and Radiological Health to educate teenagers about the dangers of sunlamps and tanning parlors and to reduce injury from elective exposure to ultraviolet radiation by tanning devices.

Education about radiation hazards is authorized under the Radiation Control for Health and Safety Act.

The poster learning unit has been mailed to all U.S. high schools and colleges. The program has been funded since 1987 by FDA.

Materials

- The Darker Side of Indoor Tanning (poster) HHS Pub. No (FDA) 87-8270

Available from: FDA, HFE-88, (HFI-40 for multiple copies), Rockville, MD 20857

The Food and Drug Administration (FDA) is responsible, by law, for conducting activities to assure that medical devices such as tampons and menstrual pads are safe and effective. For example, FDA investigators routinely visit menstrual protection product manufacturers to see that these products are made, packaged, and stored in a way that insures product quality. When individuals using medical devices report problems, FDA reviews the reports to decide whether action should be taken. If a medical device poses an unreasonable risk to public health or is ineffective, FDA can have it taken off the market. FDA also develops education programs, like this one, to help consumers make informed decisions when selecting and using medical products.

The poster learning unit has been mailed to health educators, school district administrators, and school nurses at all public, private, and parochial junior and senior high schools in the U.S.

"Toxic Shock Syndrome" is a poster-format learning unit produced by FDA’s Center for Devices and Radiological Health. Authority to disseminate this information comes from the Federal Food, Drug, and Cosmetic Act, which is enforced by FDA.

This educational program offers all students important information about toxic shock syndrome (TSS), but it is directed primarily to those at highest risk: adolescent females who use tampons for menstrual protection. The format easily accompanies a health science unit on menstruation or disease prevention. Length of the lesson may vary from 30 minutes to one or two class sessions, depending on the activities selected. Students who complete this lesson can learn (1) TSS symptoms, (2) steps to take if TSS is suspected, (3) actions that may
reduce chances of getting TSS during tampon use, (4) sources of information about TSS, and (5) ways to become an informed consumer about using tampons. Students can multiply the reach of this lesson by sharing TSS facts with family and friends. Coeducational classes are appropriate.

Hazards of Anabolic Steroid Abuse: Educational Materials

Areas of Emphasis

- Health Education Information
  
  **Subject Matter:**
  Alcohol or other drugs Hazards of abusing anabolic steroids

- Physical Education/Sports/Recreation

Target Groups

- Students
  Middle school/junior high High school

- Coaches
- Faculty and Staff

Program Profile

The Food and Drug Administration (FDA) has produced a variety of educational materials on the hazards of youngsters abusing anabolic steroids for purposes of weight gain, strength-building and improved athletic performance.

Authority to educate the public on the dangers of abusing prescription drugs such as steroids comes from section 903 of the Federal Food, Drug, and Cosmetic Act.

  Personnel training (for food managers and inspectional personnel)  Program strategies, approaches, media

  Subject Matter:
  Food safety

• School as a Healthy Environment
  Food safety

• Healthy School Food Services

Target Groups

• Cafeteria/Food Service Management

Program Profile

The Retail Food Protection Program, administered by the Food and Drug Administration (FDA), is a cooperative Federal-State effort concerned with the safety of food at the retail level. The program covers the food services (including school food service), food vending, and food store industries.

More than 85 State and territorial and 2,700 local regulatory agencies assume primary responsibility for monitoring retail food operations and assuring that industry is adequately protecting the consumer in the marketplace. FDA assists and supports these regulatory agencies by coordinating development of uniform standards, providing technical assistance and interpretation, acting as a focal point for information exchange, developing training aids, providing training, and, upon request, evaluating State programs.

FDA's Center for Food Safety and Applied Nutrition works with the Head Start Bureau to help assure that feeding programs in the Head Start centers conform with Federal food safety and sanitation recommendations.

- Health Professionals
- Community Youth Service Workers
- Minority Children, Youth, and Families

Program Profile

The Maternal and Child Health Bureau (MCHB) provides funding and other assistance in support of improving the health of America's children and youth. The legislative authority for programs of the bureau is Title V of the Social Security Act, passed in 1935, which has provided ongoing funding for child health services as part of health programs for mothers and children, administered today as the Maternal and Child Health Services Block Grant. Eighty-five percent of the appropriation is allocated to State health agencies to assist them in promoting, improving, and delivering maternal and child health care services and 15 percent is set aside for the Federal Maternal and Child Health Bureau to award on a competitive basis to special projects of regional and national significance (SPRANS).

Over 70 diverse SPRANS focus on adolescent health, which includes adolescents as an integrated component. A number of these projects target their activities toward children in school settings. Projects in research, interdisciplinary training, and demonstration grants contribute to the advancement of the knowledge base in adolescent health, facilitate leadership development in the field, and continue professional education.

State MCH programs use their Title V funds to address the health of children in their States in a variety of ways including support for school health services and programs. MCHB has, for the past four years, convened State representatives to provide greater opportunity for program interaction and technical assistance. Resources have been made available to assist States with continuing education for local providers; data needs assessment and program development; and promoting the health of children and youth through local partnership and comprehensive, community-based approaches.
Selected examples of SPRANS grants which relate to school health:

- "Youth Enrichment Support Services in a School Setting," seeks to reduce high-risk behavior in an urban high school population by providing case management services to students to link students to services which will assist them in curbing or eliminating high-risk behaviors and monitoring the use of services and attainment of established behavioral goals.

- "Better Health for Rural Teens" attempts to establish lifelong health practices by providing education and skills to promote positive health; improve the ability of the health system to meet the health needs of adolescents; and use an integrated, multiservice community approach to improve the health status of adolescents. This project includes health screening; school-based clinics for prevention and treatment; incorporation of comprehensive health education into the school curriculum; and after-school teen programs.

- "Nutrition Information for Coaches and Athletes" attempts to improve the nutrition knowledge, attitudes, and practices of high school coaches and establishes a network of nutrition resources for the coaches' use.

- "Options for Pre-Teens" is a primary prevention program for at-risk fifth, sixth, and seventh grade boys and girls. It incorporates a life-planning curriculum, academic skills improvement, a community volunteer program, school climate enhancement, parent involvement, and case management to provide individual attention and early intervention, family counseling, and networking to social and health services.

Program Profile

An interagency agreement between the Head Start Bureau of the Administration for Children, Youth, and Families and the Maternal and Child Health Bureau of the Health Resources and Services Administration.

Programs and Activities—131
represents the collaboration of two Federal programs working together to support the health, safety, and the development of social competence of children participating in the Head Start Program.

Through the Maternal and Child Health Bureau, the Public Health Service (PHS) has provided training and technical assistance for Head Start medical, dental, nutrition, and mental health services, including the development of a PHS/Head Start Training and Technical Assistance Network consisting of over 1,100 State and local medical, dental, nutrition, and mental health consultants and provides a strong link between Head Start and State and local public health agencies.

  - Information
  - Personnel training
  - Program strategies, approaches, media

  **Subject Matter:**
  - Cardiovascular health
  - Injuries/safety
  - Environment
  - Nutrition
  - Dental health
  - Life skills
  - Family life
  - Physical fitness
  - Mental health

- **Health Services**
  - Counseling/mental health
  - School-based health services
  - Feasibility study of school enrollment-based health insurance

- **Nutrition/Healthy School Food Services**
- **Collaborative Partnership Between Health and Education Policy Makers Throughout School Years for Children with Special Health Needs**

### Target Groups

- **Students**
  - Students with special needs/special education

- **Parents**
- **Faculty and Staff**
- **Community**
- **Health and Education Finance Personnel and Policy Makers**

### Program Profile

Improvement projects for children with special health needs promote collaborative partnerships between health and education program managers for children with special health care needs.
This activity is authorized by Title V of the Social Security Act, as amended by OBRA-89. There is a 15 percent set-aside of the Maternal and Child Health Block Grant for demonstration Special Projects of Regional and National Significance.

In FY91, the program funded 62 projects at a total of 12.1 million dollars. The funds were distributed in the following proportion:

- 24%—Family-centered support
- 19%—National Resource Centers
- 17%—Chronic Illness
- 14%—State Staff Development
- 13%—Early Intervention
- 13%—Systems Development

An FY92 competition is anticipated to fund 20 more State staff development projects.

Materials

The Maternal and Child Health Bureau publishes or funds a wide range of materials relevant to children with special health needs.

  - Peer support
  - Nurse, parent, and teacher education

Target Groups

- **Students**
  - High school
- **Parents**
- **Faculty and Staff**
  - School and public health nurses
  - Teachers
  - Counselors

Program Profile

The Maternal and Child Health Bureau directly supports a program of "Special Projects of Regional and National Significance." Funding for the program is provided through the Maternal and Child Health Federal set-aside program, authorized under Section 6502(a) of the Social Security Act. The regulation, implementing the Federal set-aside program, applies to genetic disease testing, counseling, and information projects, as well as other programs for Maternal and Child Health or Children with Special Health Care Needs, research and training projects, and hemophilia diagnostic and treatment centers.

The purpose of the program is to educate children, parents, educators, and providers about the etiology of genetic disorders, to increase the awareness of medical and psychosocial complications, and to assist in adjusting to the consequence of such disorders.

For the last three years funding for the Genetic Services Branch has averaged approximately $7.6 million. In addition to supporting grants for education, training, and counseling, support has also been provided to projects offering testing and followup services, improving access to service(s), and developing and expanding regional and national networks.
Materials

- The Maternal and Child Health Clearinghouse serves as the major dissemination and repository point for materials developed by projects supported by grants from this program. Some materials however, may be obtained directly from the projects.

Hemophilia and Pediatric AIDS Programs

Areas of Emphasis

- Health Education
  - Information
  - Program strategies, approaches, media
  - Subject Matter:
    - HIV/AIDS
    - Hemophilia
- Health Services
  - School nursing
  - Comprehensive care systems for hemophilia and pediatric AIDS
- School as a Healthy Environment
  - AIDS services
- School and Community Health Promotion

Target Groups

- Faculty and Staff
- Out-of-School, High-Risk Youth

Program Profile

The Hemophilia and Pediatric AIDS Branch of the Maternal and Child Health Bureau is concerned with the development of comprehensive care systems for children with hemophilia and pediatric HIV infection. Schools can be an important component of such systems of care.

With funding from the Maternal and Child Health Bureau, a School Program Presentation Guide has been developed. The purpose of this guide is to provide information to school personnel on hemophilia. The guide was designed for hemophilia treatment center nurses, as a teaching aid to assist them with school presentations, and consists of the following items:

- A presentation guide
- Set of 39 slides
- Twenty-five copies of a pamphlet, The Child With Hemophilia, First Aid in School
- Evaluation forms
Developmental disability as a result of pediatric HIV infection is so widespread that in the next several years HIV infection will likely become the primary infectious cause of developmental disabilities. School attendance plays a critical role in a child's well being. Children who are HIV infected but not in need of special education services are entitled to the same public education as other children. Children who are disabled as a result of HIV infection are entitled to special educational services and an Individualized Educational Plan designed to meet their particular learning needs. Such support may include special instruction; physical, occupational, and speech and language therapy; and other related services necessary for the child to benefit from special education.

The Maternal and Child Health Bureau provides support for the National Pediatric HIV Resource Center, which has produced a resource list for school nurses on "Schools, School Health, HIV/AIDS." The National Pediatric HIV Resource Center can be contacted at The New Jersey Medical School of the University of Medicine and Dentistry of New Jersey, Department of Pediatrics, 185 S. Orange Ave., Newark, NJ 07103, phone 201/268-8273.

140—Healthy Schools
Advanced Nursing Education Grant Program

Areas of Emphasis

- Health Education
  Personnel training

  *Subject Matter:*
  Nursing education

- Health Services
  School nursing

Target Groups

- School Nurses

Program Profile

The mission of this program is to provide Federal support for graduate education programs in Schools of Nursing. Although there is not a specific mandate for Master's & Doctoral programs in school health, many programs in Community Health Nursing include content and practice in school health.

Grants for Advanced Nurse Education are presently authorized under section 821 (a), title VIII, of the Public Health Service (PHS) Act, as amended by Public Law 100-607.

In 1990, 10 graduate programs to prepare nurses in Community Health Nursing were funded for a total of $1,551,759.

Applications for grant awards are accepted for review twice a year. In 1990, there were 82 program grants awarded. Current priorities include programs targeted to care of persons with AIDS, gerontology, minorities, and underserved populations.
For additional information, contact:

Thomas P. Phillips, PhD, RN, FAAN
Chief, Advanced Nursing Education Branch

Nurse Practitioner and Nurse-Midwifery Grant Program

Areas of Emphasis

• Health Services
  School Nursing

Target Groups

• School Nurses

Program Profile

The Nursing Shortage Reduction and Education Extension Act of 1988 (Public Law 100-607) extends and amends the nursing education authorities for the Nurse Practitioner and Nurse-Midwifery Program, under the Nurse Training Act of 1975, (Public Law 94-63), Section 822, Title VIII.

This Nurse Practitioner and Nurse-Midwifery Grant Program provides Federal support to schools of nursing and other entities that offer master's degree or certificate programs in Pediatric Nurse Practitioner (PNP), School Nurse Practitioner (SNP) and perinatal programs. Currently, 14 such PNP/SNP programs are supported, of which 9 work directly with schools and/or education departments to contract for student nurse practitioner experiences. Many graduates of these programs work in areas (schools, health departments, etc.) that provide health education, primary care, health promotion, and disease prevention programs. Information can be obtained from individual Nurse Practitioner education programs.

The Nurse Practitioner and Nurse-Midwifery Grant Program has provided support to about 50 percent of nurse practitioner and nurse-midwifery programs in the United States. This support has enabled educational programs to graduate over 10,000 nurse practitioners and nurse-midwives who then are eligible to take national certification examinations to practice.

In 1990, 62 educational programs were awarded grants, for a total of 92 specialty programs: Family, Adult, Pediatric, Gerontological, OB/GYN, Women's Health, School Health, and Occupational Health nurse practitioner programs, and Nurse-Midwifery programs.

Current priorities relate to the Secretary's target areas of access to health care, especially for minority and disadvantaged groups, and increasing minority enrollment in health professions schools. The results to be accomplished are lower infant and adult mortality rates, lower morbidity rates, particularly with respect to drug and alcohol use/abuse, tobacco use, HIV/AIDS, and other disease and lifestyle entities.

Program Profile

The Community and Migrant Health Center Program provides primary care health services to medically underserved communities. Of the 550 community and migrant health centers, there are many which have school-based programs and provide various health services to the students, faculty, and community. Due to the variability in community and migrant health centers, each school-based program offers various services.

Outreach and Primary Health Services for Homeless Children

Areas of Emphasis

- Outreach
- Comprehensive Primary Care
- Referral

Target Groups

- Homeless children through age 19
- Children at risk of homelessness
- Homeless and at-risk families

Program Profile

The Outreach and Primary Health Services for Homeless Children program is a demonstration program to provide for the delivery of comprehensive primary health services to homeless children and to children at imminent risk of homelessness. Under the program, the following services must be provided, either directly or through contract:

- outreach services to identify children who are homeless or at imminent risk of homelessness and to inform parents/guardians of the availability of services
- comprehensive primary health services, including the services of physicians, nurses, nurse practitioners, and physician assistants; diagnostic laboratory and radiology services; preventive health services; and pharmaceutical services
- referrals for provision of health services, social services, and education services, including referral to hospitals, community and migrant health centers, Head Start and other educational programs, and programs for prevention and treatment of child abuse.

Ready to Learn School Health Program

Areas of Emphasis

- Health Education
- Health Services
  - School-based or school-linked comprehensive primary and preventive health care linkage with related social services
- School Health Promotion

Target Groups

- Students
  - Preschool
  - Elementary

Program Profile

The President’s FY93 budget includes a proposal for the Ready to Learn School Health Program. Pending Congressional appropriation, this program will:

- Link schools to community and migrant health centers, health care for the homeless programs, primary care for residents of public housing programs, and other Federally qualified health centers to provide comprehensive primary health care and prevention services to children ages 3-12 and their families.

- Target children and families at risk for health-related conditions that diversely affect school performance in communities where underutilization and lack of access to primary care and preventive services contribute to school failure.

- Promote a "Habit of Health" among children to encourage responsibility and interest in their own personal health.

- Target communities that have high incidence of poverty, lack of access to primary care, high proportion of racial/ethnic minorities, and poor health status indicators.

Services will be defined by each school and include either the provision of, or referral agreements for, primary and preventive health care, including health education and related social and support services.

Program Profile

The Indian Health Service (IHS) health education program provides technical assistance and consultation to tribes and schools in the planning and implementation of school health education activities. Examples of such activities include: B.A.B.E.S.—Beginning Alcohol Addiction Basic Education Studies—(alcohol and substance abuse), family planning, inhalant abuse, physical activity and fitness, safety, HIV prevention, health promotion and disease prevention, parent/consumer education, health careers recruitment, and presentations to school boards. The IHS health education program also works with the Head Start program.

Materials

- Indian-specific health education materials are numerous.

  High school

Program Profile

The Indian Health Service (IHS) and the Centers for Disease Control have a cooperative agreement to develop a national strategy for HIV prevention education in Indian/Alaskan Native schools. The program utilizes a comprehensive school health education approach using a curriculum that has been adapted by the South Dakota State Department of Education to be culturally specific for the Plains Indian people. Other areas are using this template to adapt to their specific regions, i.e., Alaska, Southwest, etc. Currently, the areas served are Alaskan, Albuquerque-area, and Phoenix-area Native American Schools. IHS plans to expand to include all areas in the coming years. The schools utilize services from the health educators from IHS or tribal health educators to provide health fairs, assemblies, workshops, and training on a variety of topics for students in grades K-12.

Maternal and Child Health Program

Areas of Emphasis

- Health Services
  - Counseling/mental health
  - Immunizations
- School nursing
- School-based health services
- Screening

Program Profile

The Indian Health Service (IHS) is a comprehensive health care system. Thus, the resources are not categorized by age group. Adolescents are provided services within the system.

Although IHS has a central administration in Washington, the direction and development of programs are primarily the responsibility of the 12 IHS Area Offices. Specific programs in each area are unique.

  High school

- Community

Program Profile

The authority for conducting this program is covered under general authority of the Indian Health Service (IHS) to conduct programs to improve the health status of Indian people.

The purpose is to reduce severe injuries and deaths among American Indians and Alaska Natives.

To date, there has been no direct line funding for Injury Prevention Program activities but these activities have been accomplished under the Sanitation Program funds.

Accomplishments of this program include: (1) raising awareness of injuries as a major health problem; (2) providing extensive training for IHS and tribal health personnel in injury epidemiology and development of prevention programs; and (3) conducting very successful prevention projects (reducing severe injuries among the target population).

Activities of the program include: (1) Annual Injury Prevention Campaign; (2) special studies on severe injuries; and (3) development of tribal health department capacities to address the problem of injury prevention.

Upcoming activities include continuation of current activities with quality improvement.

- **Community**

Program Profile

The Indian Health Service (IHS) has placed a high priority on enhancing efforts in community and school water fluoridation and other measures to prevent dental caries. In 1990, almost 4,000 Indian children received supplemental fluoride tablets or drops and over 70,000 children were participating in fluoride mouth-rinse programs. Clinically based dental caries prevention efforts have demonstrated a 450 percent increase in the use of dental sealants since 1984. There are also many on-going tobacco education/intervention projects.

The IHS dental program works with tribally run Head Start grantees and public schools demonstrating high Indian student populations. Screenings, parental and student educational programs, and some school-based sealant projects are currently employed intervention strategies. Where applicable, fluoride rinse and tablet programs are in place.

Smoking Prevention Trials in Schools

Areas of Emphasis

- Health Education Curricula

Subject Matter: Tobacco

Target Groups

- Students
  - Elementary
  - Middle school/junior high
  - High school

Program Profile

In 1983, the National Cancer Institute (NCI) designated the Smoking, Tobacco, and Cancer Program (STCP) to serve as the focal point for the institute’s research, disease prevention, and health promotion activities related to tobacco use and cancer. The program’s goal is to employ cancer control research principles to decrease the incidence of cancer caused by, or related to, smoking and the use of tobacco products. This and NCI's smoking-related Year 2000 goal—reduction of the cancer mortality rate by up to 50 percent—are being addressed through a program of controlled intervention trials and defined population studies based on sound biomedical and behavioral research findings. The intent of the trials is to develop cost-effective, durable, generalizable, and readily adoptable interventions that will aid specific target populations in either stopping or not starting smoking.

Funding for the trials began in 1984, and since then, STCP has supported 49 intervention trials in eight major areas: adolescent smoking prevention; self-help smoking cessation strategies; utilizations of physicians and dentists as interveners; mass media approaches; prevention and cessation of smoking among women, black, and Hispanic populations; and prevention and cessation of smokeless tobacco use.

A major portion of this research activity has been aimed at preventing smoking among adolescents. Fifteen NCI-funded, school-based smoking prevention trials, involving more than 200,000 youth, have been funded since 1984. Of these trials, eight are developing new curricula or techniques for smoking prevention; three are adapting existing curricula for smoking prevention to more current approaches or special populations; and two are conducting long-term follow-up of youth who were exposed to smoking prevention programs in schools as long as 10 years ago.
To date, few of these trials have been completed. Given the magnitude of the public health problem, however, NCI sought to find what could be recommended now, particularly to schools, that would help reduce smoking among youth. In order to do this, NCI convened an expert advisory panel to address the question, "What are the essential elements of a school-based smoking prevention program?"

  **Subject Matter:**
  - Alcohol
  - Cancer
  - Nutrition
  - HIV/AIDS
  - Tobacco
  - Diffusion of innovations
  - Small business applications of new technologies

- School and Community Health Promotion
- Diffusion of Effective School Health Strategies

Target Groups

- Students
- Out-of-School, High-Risk Youth
- Community

Program Profile

The National Cancer Institute (NCI), Division of Cancer Prevention and Control, Health Education Section has two 5-year grants focusing on implementation, evaluation, and diffusion of cancer prevention curricula in the schools. Final analysis is now taking place.

Solicitation is underway to award grants focusing on materials and methods development, as well as evaluation of interventions on high-risk youth.

Announcements have been placed in the 1990, 1991, and 1992 Public Health Service Omnibus Solicitation for Small Business Innovative Research requesting applications for small grants to businesses interested in developing new applications of health promotion technologies to schools and other sites.

National Asthma Education Program

Areas of Emphasis

- **Health Education**
  - Curricula
  - **Subject Matter:**
    - Physical fitness
    - Asthma

- **School as a Healthy Environment**
  - Asthma management in school environments

- **Physical Education/Fitness/Sports/Recreation**
  - Related to exercise and asthma

Target Groups

- **Students**
  - Elementary
  - Students with special needs/special education
  - Middle school/junior high
  - High school

- **Parents**

- **Faculty and Staff**

- **Community**

Program Profile

The National Asthma Education Program (NAEP) was established to (1) raise awareness of patients, health professionals, and the public that asthma is a serious chronic disease; (2) ensure the recognition of the symptoms of asthma by patients, families, and the public and the appropriate diagnosis by health professionals; and (3) ensure effective control of asthma by encouraging a partnership among patients, physicians, and other health professionals through modern treatment and education programs.

These goals will be accomplished by working with intermediary groups including major medical associations, voluntary health organizations, and community programs to educate patients, health professionals, and the public at large.

*Programs and Activities—169*
In relation to school health promotion, NAEP hopes to raise awareness of the problems of effective asthma management by identifying gaps in existing health education resources and materials, examining patient self-medicating liability issues, and investigating barriers that prevent asthma management in schools.

Currently, NAEP is working with the Department of Education to develop asthma educational materials for school principals, teachers, nurses, and coaches. These materials will help increase the awareness of school personnel about asthma and suggest roles that school personnel can play to help students better manage their asthma while at school.

NAEP is also surveying school administrators (school board members) to determine their attitudes regarding asthma. This will be accomplished by working with the National School Boards Association to add questions regarding asthma to their existing survey on the attitudes of school administrators. NAEP is also investigating the barriers that prevent effective asthma management in schools, such as regulations which prevent students from administering their own medications.

Program Profile

The National Heart, Lung, and Blood Institute (NHLBI) provides leadership for a national research program in diseases of the heart, blood vessels, lung, and blood and in the uses of blood and the management of blood resources. It plans, fosters, and supports, through investigations in its own laboratories and through extramural contracts and grants, an integrated and coordinated research program that includes basic investigations, clinical trials, and demonstration and education projects related to the causes, diagnosis, treatment, and prevention of heart, blood vessel, lung, and blood diseases. The program includes studies of the clinical uses of blood and all aspects of the research training and career development in basic and clinical research relating to heart, blood vessel, lung, and blood diseases and transfusion medicine.

The school-based research studies funded at the institute fall mainly into the category of demonstration and education research. NHLBI funded some of its first school-based cardiovascular research efforts in the mid-1970s and expanded research in this area in the 1980s and 1990s. The investigative teams were multidisciplinary and were headed by behavioral (including educators) or biomedical scientists. A synthesis of the designs and results of nine of these studies was published in the journal, *Health Education Quarterly* (see "Materials"). These nine studies highlight the importance of the components in the school health program as a
framework for the multiple considerations in school health research. The research teams addressed one or more of the following cardiovascular risks: nutrition, physical activity, smoking, and blood pressure.

Building on many of the findings from these and other studies, NHLBI in 1989 launched a 25 million dollar multisite collaborative field trial called the Child and Adolescent Trial for Cardiovascular Health (CATCH). The CATCH trial focuses on behavioral changes in 8-11 year-old students (3rd-5th grades) in 96 schools in California, Louisiana, Minnesota, and Texas. The primary goal of CATCH is to assess the effects of school- and family-based intervention for promoting healthful behaviors in elementary school children to reduce their risk of cardiovascular disease. The interventions include classroom curricula and school environmental modifications related to food consumption, physical activity, and tobacco use, as well as family- and home-based programs to complement the school-based activities.

Some of the other ongoing research grants supported by the institute include smoking prevention studies; a study to test the effectiveness of blood pressure programs with inner city high school students; a study of the effects of teacher training models; a study comparing the effectiveness of classroom teachers with school nurses in teaching a sixth-grade smoking prevention program; and a test of the effectiveness of a risk-reduction program with American Indians in upper elementary grades located in rural areas. Another study is assessing the effectiveness of a school-based intervention on upper elementary students' physical activity levels in and out of school.

Two new studies to begin in the Spring of 1992 address teacher worksite wellness and a computer-assisted program for adolescent smoking prevention.

Activities of the Demographic and Behavioral Sciences Branch

Areas of Emphasis

- Health Education
  - Information
  - Program strategies, approaches, media
  - Research and evaluation

Subject Matter:
- Family life
- HIV/AIDS
- Sexually transmitted diseases
- Adolescent pregnancy and related behaviors

Program Profile

The Demographic and Behavioral Sciences Branch supports research on the antecedents and consequences of early childbearing, pregnancy, and related behaviors. The program supports basic behavioral research as well as evaluations of theoretically based interventions. Research on these topics supported by the branch over the past 20 years has included national studies of teen pregnancy, contraceptive use, and sexual behavior; a large number of smaller studies examining the influence of social, demographic, and psychological factors on fertility-related behaviors; and evaluation of intervention programs based on the Health Belief Model. The current portfolio includes projects examining the influence of school performance and environment on adolescent fertility-related behaviors. Most research is supported through investigator-initiated grants awarded through the ongoing program of research funding at NIH. The branch also issues requests for applications or requests for proposals relevant to this subject area on an occasional basis. Program activities are authorized by the Public Health Service Act, Title IV, Part C, Subpart 7, sections 448-451.

Noise-Induced Hearing Loss Campaign

Areas of Emphasis

- Health Education
  Program strategies, approaches, media

Subject Matter:
Noise-induced hearing loss

- School and Community Health Promotion

Target Groups

- Students
  Elementary
  Middle school/junior high
  High school
  Students with special needs/special education

- Parents

- Faculty and Staff

- Out-of-School, High-Risk Youth

- Community

- Health Care Professionals, Physicians

Program Profile

The National Institute of Deafness and Other Communication Disorders (NIDCD), one of the 13 institutes in the National Institutes of Health established by law, conducts and supports research and research training on normal mechanisms as well as diseases and disorders affecting hearing and other communication processes, balance, smell, taste, voice, speech, and language. NIDCD also supports efforts to create devices that substitute for lost and impaired sensory and communications functions and conducts and supports research and research training that is related to disease prevention and health promotion. NIDCD addresses special biomedical and behavioral problems associated with people who have communication impairments or disorders.

The National Institutes of Health Consensus Development Conference on Noise and Hearing Loss on January 22-24, 1990, brought together biomedical and behavioral scientists, health care providers, and the public to address the characteristics of noise-induced hearing loss, acoustic parameters of hazardous noise exposure, individual and age-specific susceptibility, and prevention strategies.
One of the panel's recommended top priorities for the 1990's is prevention, including public education on the hazards of noise exposure. The panel's report stressed that noise-induced hearing loss is insidious, permanent, and irreparable and causes communication problems that can substantially affect one's quality of life.

The NIDCD clearinghouse will establish a national noise prevention and education program. Through this program everybody in the United States will be able to learn more about noise-induced hearing loss.

Epidemiology and Oral Disease Prevention Program

Areas of Emphasis

- Health Education
  - Information
  - Personnel training
  - Program strategies, approaches, media

  Subject Matter:
  Oral health

- Health Services
  - Consultation

- School and Community Health Promotion

Target Groups

- Students
  - Preschool
  - Elementary
  - High school

- Faculty and Staff

- Community

- Parents

Program Profile

The purpose of these program activities is to increase the oral health of school-aged children by fostering the application of research results. Specific activities include developing and providing guidelines for implementing school-based dental caries preventive regimens (such as fluoride rinse or tablet regimens and the application of pit and fissure sealants) or plaque removal to prevent gum diseases, and for providing health education and educational materials that buttress the use of these preventive procedures. Funding for establishing or continuing these kinds of programs is not available. Rather, consultation and in-service training is provided in addition to the guidelines and educational materials. The National Institute of Dental Research also has conducted two national epidemiological surveys (1979-80, 1986-87) on children ages 5 through 17. It is through this activity that one can determine that dental caries has continued to decline among these age groups. These epidemiologic surveys also found that the majority of tooth decay is in the chewing surfaces of teeth and that a small proportion of children and youth have the most oral disease. Thus, current efforts are focused on trying to increase the use of pit and fissure sealants, fluorides, and oral hygiene procedures and to focus on improving the oral health of minority students who are at highest risk for these diseases.
Materials

- Guide to Implementing School-based Fluoride Regimens in School Settings
- Leaflets about fluoride use (children and adults) and sealants
- Posters about fluoride for all ages and dental sealants
- Bookmarks about dental sealants and fluorides
- 16mm films about fluorides and periodontal diseases (free-loan)
- Videos about fluorides and periodontal disease

• School and Community Health Promotion

Target Groups

• Federal Agencies
• Policymakers
• National Organizations

Program Profile

The mission of the Office of Disease Prevention and Health Promotion (ODPHP) is to provide leadership for disease prevention and health promotion among Americans. The office undertakes this mandate through the formulation of national health goals and objectives; the coordination of Department of Health and Human Services (DHHS) activities in disease prevention, health promotion, preventive health services, and health information and education with respect to the appropriate use of health care; and the stimulation of public and private programs and strategies to enhance the health of the Nation.

ODPHP has coordinated the national initiative to develop the Healthy People 2000 National Health Promotion and Disease Prevention Objectives to be achieved by the year 2000. Healthy People 2000 is a set of 300 national objectives arranged under 22 priority areas. Twenty of these objectives directly relate to school health education or other aspects of comprehensive school health programs. Over one-third of the 300 objectives can either be directly attained by schools or the attainment of these objectives can be influenced in important ways by schools.

Through the Healthy People 2000 initiative, ODPHP works to promote the implementation of school health programs and to build partnerships between health and education and between government and private sector efforts relating to school health.
ODPHP has entered into a limited number of three-year cooperative agreements with national membership organizations to promote the Healthy People 2000 objectives as they relate to particular populations or to particular settings. A cooperative agreement with the American Association of School Administrators addresses the school setting. Another cooperative agreement, with the American Medical Association Department of Adolescent Health, addresses the youth population, including school health issues.

Interagency Ad Hoc Committee on Health Promotion Through the Schools

Areas of Emphasis

- Health Education
- Health Services
- School as a Healthy Environment
- Nutrition/Healthy School Food Services
- Physical Education/Fitness/Sports/Recreation
- Worksite Health Promotion for Faculty and Staff
- School and Community Health Promotion

Target Groups

- Federal Agencies

Program Profile

Since 1983, the Office of Disease Prevention and Health Promotion has coordinated and chaired a Federal Interagency Ad Hoc Committee on Health Promotion through the Schools. This committee meets bimonthly and serves as an on-going forum for sharing information among Federal agencies at the staff level about programs and activities related to school health.

In 1983, the U.S. Department of Health and Human Services and the U.S. Department of Education cosponsored an "Interagency Meeting on Health Promotion Through the Schools." In preparation for this meeting, an informal survey was carried out which noted that school health-related activities were going on in numerous offices and agencies of the Federal government. Participants in this interagency meeting expressed the need for an on-going forum to discuss Federal school health initiatives.

The Interagency Ad Hoc Committee continues to meet regularly. In July 1990, a member of the staff of the Department of Education's Program on Comprehensive School Health Education began cochairing the committee along with the Coordinator of Children and School Programs at the Office of Disease Prevention and Health Promotion in the Department of Health and Human Services. Participating on the Interagency Ad Hoc Committee are individuals representing agencies and offices in the Departments of Agriculture, Defense, Education, Health and Human Services, Justice, and Transportation, and the Environmental Protection Agency.

The committee has recently conducted an update of the 1983 survey to ascertain the extent of Federal programs and activities applicable to health promotion through the schools.
Two years ago, funds were contributed from several agencies represented on the committee to carry out a market research project on health communication with hard-to-reach youth, which is currently being conducted.

The Healthy EDGE in Schools: Eating, the Dietary Guidelines, and Education

Areas of Emphasis

• Health Education
  Personnel training

  Subject Matter:
  Nutrition

• Nutrition/Healthy School Food Services

Target Groups

• Parents
• Faculty and Staff
  Food Service Staff
  School Administrators
• Health Educators
  School board members
• Teachers

• Community
• Media

Program Profile

The 1980 Dietary Guidelines for Americans, revised in 1985 and 1990, and the 1988 Surgeon General’s Report on Nutrition and Health both link diet and health. But many school districts are less certain than others about how to integrate this information into their education and food service programs. School food service personnel, teachers, and others in the education community have had to rely largely on their own experience and education, which may vary significantly.

The School Food Service Foundation, working with the Office of Disease Prevention and Health Promotion, has responded by developing The Healthy EDGE in Schools: Eating Dietary Guidelines, and Education. Healthy EDGE consists of a motivational videotape and a companion “how-to” manual highlighting successful, cost effective ways of incorporating the Dietary Guidelines for Americans into school food service and offering concrete information about nutrition approaches, promotions, and networking with other members of the education community.

To carry out this project, the foundation received funding under the terms of a cooperative agreement with the U.S. Department of Health and Human Services (DHHS). This agreement is in keeping with DHHS’s Healthy People 2000 nationwide objectives. In addition, the Beef Industry Council of the Meat Board contributed support for this project.
The video and manual will be used (a) for inservice training of school food service personnel in menu planning, recipe development, food purchasing, promotion planning, nutrition and student involvement activities; and (b) with the broader education "team"—teachers, parents, administrators, school health personnel, coaches, etc.—to help them better understand and/or communicate the relationship between diet and health.

Throughout the coming year, a series of mini manuals will be published in the School Food Service Journal, expanding on the information presented in the original manual.

In planning these materials, the School Food Service Foundation convened an "Idea Seminar," bringing together 42 leaders in school food service and State child nutrition programs, as well as representatives of government and the food industry and experts in the areas of health and physical fitness. The result of this two-day session was a tremendous volume of information that was distilled and presented in the video and manual.

186—Healthy Schools
Nutrition Guidance for Child Nutrition Programs

Areas of Emphasis

• Nutrition/Healthy School Food Services

Target Groups

• U.S. Department of Agriculture Child Nutrition Program Cooperators

Program Profile

The Child Nutrition and WIC Reauthorization Act of 1989 requires the Secretary of Agriculture and the Secretary of Health and Human Services to jointly develop a publication to be entitled Nutrition Guidance for Child Nutrition Programs. This publication will be distributed in Spring 1992, to all school food service authorities, institutions, and organizations participating in the Child Nutrition Programs.

The target audience, approximately 275,000 program cooperators, varies from food service directors of large multi-unit school systems to family day care providers in a home setting.

This nutrition guidance, developed jointly by the U.S. Departments of Agriculture and Health and Human Services, gives nutrition advice to those responsible for preparing meals for children under the Child Nutrition Programs. This guidance is based on Nutrition and Your Health: Dietary Guidelines for Americans, the third edition, 1990, which provides advice for healthy Americans ages 2 and over—not for younger children and infants, whose dietary needs differ.

The Nutrition Guidance for Child Nutrition Programs is the first step in a series of revised technical assistance efforts to help food service personnel and other persons responsible for feeding children improve children’s health by offering meals in the Child Nutrition Programs that reflect current dietary guidelines.

  Curricula
  Information
  Subject Matter:
  Comprehensive health education
  Alcohol or other drugs
  Nutrition
  Tobacco
  Life skills
  Family life
  HIV/AIDS

• Health Services
  Counseling/mental health

• School and Community Health Promotion

Target Groups

• Students
  Middle school/junior high
  High school
• Parents
• Faculty and Staff

Program Profile

The Adolescent Family Life Legislation (Title XX of the Public Health Service Act) was enacted in 1981 and is administered by the Office of Adolescent Pregnancy Prevention Programs of the Office of Population Affairs. It authorizes the funding of community-based and community-supported demonstration grants that address the problems associated with adolescent sexuality and adolescent pregnancy. Public or private nonprofit organizations and agencies may apply for funds for care or prevention projects.

Care projects must provide, on-site or by referral, 10 required services which together comprise comprehensive and integrated health, education, and social services.

Prevention projects are value-based, family-centered approaches that provide family life services that discourage the early onset of sexual activity and promote abstinence for unmarried adolescents.

Care projects have been carried out in regular and alternative schools. Prevention projects have tested family life curricula in school settings.
The availability of funds is announced in the Federal Register; funding is competitive.

The Office of Adolescent Pregnancy Programs is currently funding 30 care and 26 prevention projects.

190—Healthy Schools
Healthy Children Ready to Learn Initiative

Areas of Emphasis

• School Readiness

Target Groups

• Students
  • Preschool

• Parents

• Community

• Policy Makers; Federal Program Administrators; Organizations

Program Profile

The Surgeon General's "Healthy Children Ready to Learn Initiative" has grown out of a request from the White House to "mobilize the Nation" toward meeting the health and education needs of the children of the Nation. This effort has been designed to fulfill the health requirements as outlined in the President's first national education goal: By the year 2000, all children in America will start school ready to learn.

This initiative has been underway since the Summer of 1990 and forms a critical part of the Surgeon General’s agenda. Through the advice and direction of an advisory group comprised of White House staff and key Federal program directors from three departments, the initiative has been defined with clear articulation of operating principles and goals. The operating principles include, first, all children have a right to be healthy; second, a "good science, good sense" approach is needed; and third, healthy children ready to learn come from healthy families.

The goals of the initiative are to:

• Articulate the health and education rights of all children.

• Build upon the strength of existing programs, routinely highlight specific programs that are in some unique manner addressing the health component of the President’s first national education goal, and share this information with other communities.

• Support activities that would facilitate the role of all sectors of society—particularly parents and families—in managing and promoting the health of children, thereby contributing to their optimum education.

• Build upon existing resources and programs to explore new ways of addressing the health and education needs of children.
These principles and goals have been communicated throughout Government and at every opportunity to the multitude of audiences and professional organizations the Surgeon General addresses. The initiative builds upon the Secretary of the Department of Health and Human Service's Program Directions and the Year 2000 Health Promotion and Disease Prevention Objectives for the Nation.

Upcoming events and activities include numerous presentations, a dialogue with all health and education professional organizations, an immunization education and action program, and a national conference on Healthy Children Ready to Learn, with a focus on the critical role of parents and families.

President’s Challenge

Areas of Emphasis

- Physical Education/Fitness/Sports/Recreation
- Fitness Awards Program; Physical Fitness

Target Groups

- Students
  - Elementary
  - Middle school/junior high
  - High school

Program Profile

The President’s Council on Physical Fitness and Sports (PCPFS) operates under an Executive Order from the President of the United States. The general statement says that the council will serve as a catalyst to promote, encourage, and motivate the development of physical fitness and sports programs for all Americans.

A small staff office with a budget of approximately $1.4 million, the PCPFS, in addition to providing technical support to various public and private organizations, has general fitness information available to the public. Information is available on resources available to schools, communities, business, and industry, along with some promotional materials.

The President’s Challenge is a program of the PCPFS which began in 1966. With the implementation of the Presidential Physical Fitness Award, youngsters ages 6-17 can strive for one of 3 awards as part of the President’s Challenge:

- The Presidential Physical Fitness Award recognizes an outstanding level of fitness for those who score at or above the 85th percentile on all 5 items on the President’s challenge (curl-ups, shuttle run, 1 mile run/walk, pull-ups, and V-sit reach).

- The National Physical Fitness Award recognizes a basic yet challenging level of physical fitness for students scoring at or above the 50th percentile on all 5 items.

- The Participant Physical Fitness Award recognizes boys and girls who attempt all 5 test items but whose scores fall below the 50th percentile on one or more of them.

The State Champion Award recognizes the top schools in each State that qualify the highest percentage of students for the Presidential Physical Fitness Award.
Materials

  Elementary
  Students with special needs/special education
  Middle school/junior high

Program Profile

The Early and Periodic Screening, Diagnosis, and Treatment (EPSDT) program is a Federally sponsored Medicaid program administered by each State, in which Medicaid eligible families may voluntarily participate. In some States, the health department manages the program; in some States, the welfare department manages it; and in a few States, a special commission is responsible for the program. The program is intended to provide a comprehensive range of health care services to children of Medicaid eligible families.

Supplemental Security Income Program

Areas of Emphasis

• Program providing monthly cash benefits and access to health-related programs—such as Medicaid and Food Stamps—for blind and disabled persons, including children

Target Groups

• Students
  - Preschool
  - High school
  - Elementary Students with special needs/special education
  - Middle school/junior high

• Parents

• Faculty and Staff

• Out-of-School, High-Risk Youth

• Community

• Family members, medical/paramedical community members who have information about children with disabilities

Program Profile

The 1972 Amendments to the Social Security Act (P.L. 92-603) established the Supplemental Security Income (SSI) program.

The purpose of SSI is to provide a basic level of income support to needy aged, blind, and disabled persons (including children) based on nationally uniform eligibility standards and payment levels.

The program is administered by the Social Security Administration (SSA) and funded from Federal general revenues. A local network of 1,300 Social Security Administration district offices facilitates program participation for blind and disabled children.

The program provides income so that disabled children can transition to employment. SSI recipients may be eligible for noncash food and shelter programs, and for Medicaid in many States.

SSA recently awarded 25 cooperative agreements under the SSI Outreach Demonstration program, to demonstrate effective approaches for identifying potentially SSI eligible individuals and assisting them through the application process. Several of the projects specifically target blind and disabled infants, children, and youth transitioning to the workforce.
SSA is changing the way it determines if a child is disabled, because of a recent Supreme Court case. As a result, many more children are expected to be eligible for SSI benefits which will help them make the transition to the workplace. SSA would like to work hand-in-hand with the schools to help identify those children. We feel that the Individual Education Plan, required under P.L. 94-142, should include SSI referrals, as appropriate.

- **Parents**

Program Profile

Head Start is a comprehensive child development program for preschool children, authorized under Title I of the Human Services Reauthorization Act of 1990 (P.L. 101-501). The FY91 appropriation is $1,951,800,000.

Head Start provides comprehensive services to low-income preschool children and their families, emphasizing cognitive and language development, socioemotional development, physical and mental health, nutrition, social services, and parent involvement. During the 1989-90 school year, medical and dental screening and treatment services were provided to virtually all of the 540,930 children enrolled in nearly 1,300 Head Start programs nationwide. Included in this figure are 67,140 children with disabilities, who make up 13.47 percent of Head Start's enrollment.
Since the program began in 1965, approximately 12 million children have received health services through Head Start.

• Parents
• Faculty and Staff
• Community

Program Profile

All of the programs of the National Center on Child Abuse and Neglect (NCCAN) may have some relevance for school health. The Clearinghouse on Child Abuse and Neglect could be utilized for a comprehensive literature search on specific school-based and related projects.

Two grants were funded in 1987 to look at the relationship of child maltreatment to children’s social and emotional development and school performance. A number of the current research grants are also looking at such relationships.

Nine Parent-Adolescent Mediation demonstration projects were funded in 1987 that could have applicability for use in the school systems.

Nine 5-year grants were awarded in September 1989, for the planning and development of model, comprehensive, community-based child physical abuse and neglect prevention programs that include school-based, age-specific prevention programs for school-age children.

Activities of the Administration on Developmental Disabilities

Areas of Emphasis

- Health Services
  - Counseling/mental health
  - Screening
  - Testing and diagnosis for developmental disabilities

- Provides Federal money to States to plan advocate services (including health) in support of persons who are developmentally disabled. Also provides Federal funds to universities to train professionals (including health professionals).

Target Groups

- Students
  - Students with special needs/special education

- Parents

Program Profile

Programs are funded under the authority of The Developmental Disabilities Assistance and Bill of Rights Act (DD Act), P.L. 100-146. This statute expired October 1, 1990, and reauthorization is pending. The program has 4 components/purposes as follows: Basic State Grants are awarded to States on a formula basis to establish a Planning Council, which develops and implements a comprehensive plan for meeting the needs of persons with developmental disabilities. Protection and Advocacy Systems are established by providing formula grant funds to States to operate a system to protect and advocate for the rights of persons of developmental disabilities. The University Affiliated Programs (UAP) provide operational and administrative support to a national network of universities involving interdisciplinary training; the demonstration of exemplary services and technical assistance; and the dissemination of information to increase the independence, productivity, and community integration of persons with developmental disabilities. Funding history FY88 $92,867,000; FY89 $95,000,000; FY90 $98,500,000. Program competitions are tied to DD Act requirements: 44 UAPs; 3 satellite centers are funded. UAPs compete for training grants: early intervention (11); elderly (7); and community-based programs (14). There is a competition for the final program component—open grants and contracts with public or nonprofit private entities. Priority areas for FY90 were self-advocacy/empowerment; data collection, technical assistance, community integration; pediatric AIDS; and minorities with developmental disabilities.

- **Community**
- **Out-of-School, High-Risk Youth**
- **Exploited and Homeless Youth**

Program Profile

This program is pursuant to the Juvenile Justice and Delinquency Prevention Act as amended, subpart II-Special Emphasis Prevention and Treatment Program, Section 261(a). The purpose of this program is to improve public and private services to high-risk youth, less than 18 years of age in order to deter illegal activities and to divert them from initial contact with or continued involvement in the Juvenile Justice System. It is designed to develop effective responses to illegal drug use, serious delinquent activity, sexual exploitation, and the companion problem of AIDS. The program was awarded $399,961 for a program period of 9-1-89 to 8-31-91. The program has completed an analysis of relevant research as well as an extensive survey of programs across the country with an indepth study of six programs. The program is in the initial stage of model program development with development of a companion technical assistance program and materials and an information dissemination plan.

Effective Systemwide Strategies to Combat Youth Drug and Alcohol Abuse

Areas of Emphasis

- Health Education Curricula
  
  Subject Matter:
  Alcohol or other drugs
- School and Community Health Promotion
- Training; Information Sharing

Target Groups

- Parents
- Faculty and Staff
- Community

Program Profile

The purpose of this project is to develop the capability for a multifaceted effort within communities to combat youth drug and alcohol abuse. The goal is to help communities assess their resources and use them to develop a comprehensive and coordinated system to address drug and alcohol-related problems.

A curriculum manual in the form of modules has been developed, and it features substance abuse prevention, intervention, and treatment.

**Program Profile**

The national Cities in Schools, Inc. (CIS) is a nonprofit corporation supported through private contributions and, since July 1984, by the U.S. Department of Justice, Office of Juvenile Justice Delinquency Prevention. Since March 1986, support has been through an interagency agreement among the U.S. Departments of Justice (the lead agency), the Department of Health and Human Services, the Department of Labor, and the Department of Education. From April 16, 1990—April 15, 1991, the interagency agreement included the Department of Justice, the Department of Commerce, the Department of Health and Human Services, and the Department of Labor. Specific funding amounts vary from year to year, but are approximately from $1,400,000 to nearly $2 million per year.
The national organization provides training and technical assistance to communities and States to develop their own independent, incorporated nonprofit local CIS program and also emphasizes the development of new alternative schools within existing school systems. The national organization delivers formal training, conducts regional conferences, and provides on-site or regional board and staff development training for local programs. The training program encompasses all aspects of program development, service delivery, and administration. National services to localities are delivered at no charge to the community or local program.

Local CIS programs implement comprehensive dropout prevention programs that feature coordinated health, educational, and social services delivered to students enrolled in public schools. Services are provided at the school site by staff who are repositioned from existing community-based agencies and public agencies and by volunteers (or sometimes hired by the local program). The exact services that are provided at any given school site will vary from local program to program. All CIS local programs include substance abstinence counseling, personal counseling, and health screening among their services. Students enrolled in CIS programs are involved in a case management system that helps to assure that the student's need for support services are met. Where specific services are not included at the school, arrangements for referrals are made.

Local programs are supported through their own grantsmanship efforts from a variety of sources, including the local/State education agency, the JTPA system, other Federal and State programs, private foundations and individual contributions. In a few States, State legislation supports local CIS organizations, especially their expansion into additional school sites.

As of June 1990, there were a total of 46 local CIS programs in 16 States providing services at 217 school sites to 29,556 students. There are now State CIS programs operating in Texas, Georgia, Florida, North Carolina, South Carolina, Virginia, Arkansas, and New Jersey, which assist in the development of Statewide coordinated services for at-risk youth and their families and the development and operations of CIS local programs.

  - Middle school/junior high
  - High School

- **Parents**
- **Faculty and Staff**
- **Community**

Program Profile

Funded under the Juvenile Justice and Delinquency Prevention Act of 1984 as amended, Super Teams is a drug and alcohol prevention program utilizing peer counseling centered in high schools. Funding history: 1985, $42,980 of which $9,000 came from the Drug Enforcement Administration; 1987, $50,000; 1988, $50,000; 1989, $37,500; 1990, $50,000.

The program trains a group of student leaders to resist drugs and alcohol and has them, in turn, affect other youth. Founded by professional athletes and in conjunction with the National Football League Players Association, Super Teams obtains support from faculty and parents and selects students to participate in an intensive residential training program where they learn techniques to combat peer pressure regarding use of alcohol and drugs. They also learn about HIV, nutrition, and family life; however, the major emphasis is on alcohol and drugs and academic achievement. Trained students develop programs throughout the school and develop outreach programs to junior high school and elementary schools in the area.
Super Teams has been institutionalized in several schools in the District of Columbia, and recent funding has allowed expansion into four schools in Prince George's County, Maryland.

Job Training Partnership Act Program

Areas of Emphasis

- Health Education
  Information
  Referral

Subject Matter:
Alcohol or other drugs

Target Groups

- Economically disadvantaged youth ages 16-21 (in or out of school) and adults; up to 10 percent of participants may have barriers to employment, e.g., school dropout, handicapped, and not be economically disadvantaged

Program Profile

The Job Training Partnership Act (JTPA), P.L. 97-300, was enacted in 1982. Title IIA, Training Services for Disadvantaged Youth and Adults, provides a broad range of services to the economically disadvantaged to increase their employment and earnings and reduce welfare dependency. Title IIB, Summer Youth Employment, is designed to enhance basic educational skills of youth, encourage high school completion, and provide youth exposure to the world of work.

The Federal government allocates funds—about $1.7 billion for Title IIA and about $700 million for Title IIB—to States by formula, and States, in turn, allocate funds using the same formula to local communities, called Service Delivery Areas, to support training and related services.

Under Titles IIA/B, local private Industry Councils plan and oversee these and other training and employment programs in partnership with local elected officials.

Title II services are provided at local discretion and based on local labor market conditions and resources, e.g., assessment and career counseling, basic skills and job skills training, work behavior and attitude training, and job development and placement. A limited portion of local funds—up to 15 percent—can be used for support services such as child care, transportation, or substance abuse education and referral to help "trainees" continue their participation. Health/substance abuse education and referral services vary according to local service delivery area needs and resources.

Title IIB provides subsidized temporary summer jobs for poor youth. Education services are playing an increasingly important role in the summer youth program. All local areas are required to assess youth and provide basic educational services where needed in addition to jobs. It serves about 620,000 youth each year.
Many States and local areas provide services to many individuals with substance abuse-related problems and employ strategies for preventative measures.

Employment and Training Administration planning guidance to Governors for JTPA Program Years 1990 and 1991 (July 1, 1990–June 30, 1992) encouraged States to promote drug awareness and drug education efforts for JTPA participants.

The Department of Labor administers a model research and development program to address a variety of training and employment issues. A number of these demonstration projects may include a component on life skills or substance abuse education.

Program Profile

The Job Corps is a major training and employment program administered by the Department of Labor to alleviate the severe employment problems faced by disadvantaged youth throughout the United States. Job Corps was originally established by the Economic Opportunity Act of 1964; current authorization for the program is Title IV-B of the Job Training Partnership Act.

Job Corps is designed to assist young people who both need and can benefit from the wide range of services provided in the residential setting of a Job Corps center. These services include basic education, vocational skills training, work experience, counseling, health care, and related support services. Enrollees are impoverished and unemployed young people between the ages of 16 and 21 who have volunteered for the
program. These youth are typically from such debilitating environments that they must be relocated to residential centers in order to benefit from the intensive type of services provided through the Job Corps program.

Job Corps operates through a partnership of the government, Department of Labor, and the private sector. The government provides the facilities and equipment for Job Corps centers and the funding for recruitment of enrollees, center operations and placement of enrollees upon termination. Major corporations and nonprofit organizations manage and operate 77 Job Corps centers under contractual agreements with the Department of Labor. The Departments of Agriculture and Interior operate 30 Job Corps centers, called civilian conservation centers, on public lands. Labor union and trade associations provide specialized training at many Job Corps centers.

  - High school

• **Parents**

• **Faculty and Staff**

• **Community**

---

Program Profile

The objective of the National Highway Traffic Safety Administration (NHTSA) youth impaired-driving prevention program is to reduce injury and death to young persons resulting from alcohol- and other drug-related motor vehicle crashes.

Schools play a pivotal role in youth traffic safety, for they are the settings in which most youth receive driver and traffic safety education. NHTSA student programs emphasize not only school-based activities, but extracurricular, community, and parent activities as well.

NHTSA's efforts to reduce impaired driving among young persons have included a variety of research and programmatic activities. Past research activities included field tests of various school-based approaches to teaching adolescents about alcohol and driving; identification of the assumptions upon which youth drinking-driving prevention programs are based; identification of youth knowledge, attitudes, and behavior regarding drinking and driving; and investigation of approaches to assist parents in preventing drinking and driving among their children. Programmatic activities have included school assembly programs (Road-to-Winning and emergency highway safety programs) among school administrators.

*Programs and Activities—217*
Current NHTSA efforts to reduce impaired driving among youth include promotion and support of programmatic activities (e.g., Taking the Lead, Team Spirit, Project Graduation) and student safety programs, as well as several new initiatives, including:

- An effort with the National 4-H Council to provide training and technical assistance in coalition building for communities interested in reducing drug and alcohol use, as well as impaired driving, by young persons.
- Revising the publication *Guidelines for a K-12 Traffic Safety Education Curriculum* to focus on secondary grades, update information, and identify germane curricula materials.
- Development of a Student Safety Handbook, targeted to parents and teachers, which will provide information on traffic safety issues affecting students of all ages.
- Development of NHTSA's "Youth Kit" containing K-12 curriculum guides, student safety club materials, provisional licensing and fraudulent ID information, and examples of comprehensive community programs.

---

**Materials**

- *Team Spirit: A Community-Based Youth Leadership Program to Prevent Abuse of Alcohol and Other Drugs* (Brochure, Manual, and Program Guide)
- *Join the Celebration—Operation Prom Graduation* (Handbook, Public Service Announcement, Poster)
- *Forum on Youth Traffic Safety Initiatives* (Handbook)
- *Youth Driving Without Impairment: A Community Challenge* (Handbook)
- *Shifting Into Action: Youth and Highway Safety* (Handbook)

Occupant Protection—Children and Youth

Areas of Emphasis

- **Health Education**
  - Curricula
  - Program strategies, approaches, media

  *Subject Matter:*
  - Injuries/safety

- **Worksite Health Promotion for Faculty and Staff**
- **School and Community Health Promotion**

Target Groups

- **Students**
  - Preschool
  - High school
  - Elementary
  - Middle school/junior high

- **Parents**
- **Faculty and Staff**
- **Out-of-School, High-Risk Youth**
- **Community**
- **General Population**

Program Profile

The objective of the National Highway Traffic Safety Administration's (NHTSA) Office of Occupant Protection is to increase the use of seat belts, child safety seats, and automatic crash protection to the maximum level possible. This traffic safety program comes under the authority of the Highway Safety Act of 1966, as amended (23 U.S.C. Chapter 4).

The agency has directed energies toward reaching high-risk populations including youth. The Governor of each State has appointed a youth coordinator to work with school and other officials to reach young people. Alcohol and occupant protection are the prime subject areas covered. The "70% PLUS Honor Roll" has prompted high schools to work toward achieving a minimum of 70% belt use.

Networking with public health and education groups at the national level has been a prime focus of the agency. A National Seat Belt Coalition has been formed and groups working with young people in all areas are being asked to join and to reach out with belt messages.
Schools play a pivotal role in youth traffic safety, for they are the settings in which most youth receive driver and traffic safety education. Youngsters are receptive to information, and experience dictates that they are also excellent deliverers of safety messages. NHTSA's student programs emphasize not only school-based activities, but extracurricular, community, and parent activities as well. NHTSA also has a cooperative agreement with the National Safe Kids Campaign. Its coalitions work with a variety of populations, some of which are in school settings.

The agency's current and anticipated priorities will center on the Presidential goal for the agency of reaching 70% belt use by 1992.

Materials

- *Sudden Impact: An Occupant Protection Fact Book* (curriculum manual for high school, adults)
- *Vince and Larry on Belts and Bags* (pamphlet for junior high/high school, adults)
- *National Awards Program—Safety Belt Use* (pamphlet for high schools, adults)
- *How to Plan a Comprehensive Community Protection Program* (manual)
- *Vince and Larry Game* (poster for elementary grades)
- *The Car Club* (curriculum kit for middle/junior high school)
- *Taking the Lead Student Leaders Manual* (curriculum for high school)
- *Taking the Lead Facilitator's Guide* (curriculum guide for video)
- *Taking the Lead* (video 1/2" VHS)
- *Safer Way for Everyday* (curriculum kit for K-3)
- *Safety Belt Activity Guide* (curriculum kit for K-6)

Pedestrian and Bicycle Safety Programs

Areas of Emphasis

• Health Education Curricula

  Subject Matter:
  Injuries/safety (traffic safety)

• School as a Healthy Environment Safety

• School and Community Health Promotion

Target Groups

• Students
  Preschool  Elementary

• Parents

Program Profile

In 1989, approximately 20% of children aged 0-17 killed in motor vehicle crashes were either pedestrians or bicyclists.

The goal of NHTSA’s pedestrian and bicycle safety programs is to reduce injury and fatalities associated with motor vehicle crashes involving pedestrians and bicyclists. Of particular concern are children aged 5-9. Education, skills training, role modeling by parents, and use of approved bicycle safety helmets are key factors in reducing these fatalities. All these traffic safety programs come under the authority of the Highway Safety Act of 1966, as amended (23 U.S.C. Chapter 4).

In the late 1970’s, the "Willy Whistle" videos and teachers’ guides were developed and found effective in reducing the incidence of pedestrian crashes among 5-12 year olds. The "Walk in Traffic Safely" and "Children Riding on Sidewalks Safely" were developed by the National Association for the Education of Young Children (NAEYC) through a grant from NHTSA as curriculum for preschool children. Pedestrian and bicycle safety flyers were developed in conjunction with other organizations to help parents and teachers promote pedestrian and bicycle safety for children.

The previously mentioned Willy Whistle materials are being revised to reflect a more modern appearance. A mini bicycle safety curriculum is under development for use in upper elementary school classrooms. Program
planning materials and program implementation grants are available to communities to implement pedestrian safety programs. Many of these programs have school-based education activities as major program components. Liaisons with other organizations such as the National SAFE KIDS Campaign and the U.S. Consumer Product Safety Commission will continued.

Schools play a pivotal role in youth traffic safety, for they are the settings in which most youth receive driver and traffic safety education. Youngsters are receptive to information, and experience dictates that they are also excellent deliverers of safety messages. NHTSA's student programs emphasize not only school-based activities, but extracurricular, community, and parent activities as well. Schools have played an important role in teaching children—particularly elementary school-age children—about bicycle and pedestrian safety. Through a combination of classroom and practical training, students enhance their knowledge and skills to help them avoid crashes as pedestrians and bicyclists.

Asbestos in Schools

Areas of Emphasis

• School as a Healthy Environment
  Asbestos abatement

Target Groups

• Students
  Elementary  Middle school/junior high  High school
• Parents
• Faculty and Staff
• Community

Program Profile

In October 1986, Congress passed the Asbestos Hazard Emergency Response Act (AHERA) which required all 45,000 of the nation’s public and private, primary and secondary schools to:

• Inspect their buildings for all asbestos-containing materials
• Develop management plans to control exposure to these materials
• Select and implement "response" or control actions, ranging from in-place management to removal, as appropriate
• Take each of these actions—inspections, management planning and response action—with specially trained and accredited personnel
• Provide proper awareness and worker training, as well as notification to workers and parents.

Since 1985, EPA has awarded $291.5 million to schools nationwide to assist with asbestos abatement. The Asbestos School Hazard Abatement Act (ASHAA) program distributes funds based on financial need and hazard. Each annual award cycle is determined by congressional appropriation.

To receive further information on asbestos in schools, contact the EPA asbestos hotline, 202/554-1404.

  Information

  Subject Matter:
  Injuries/safety

- School as a Healthy Environment
  Safety

- School and Community Health Promotion

Target Groups

- Students
  Preschool
  Elementary
  Middle school/junior high

- Parents

Program Profile

The purpose of the Consumer Product Safety Commission (CPSC) pilot project for school/daycare safety is to determine the feasibility of developing communication channels to and through elementary schools and child care centers to reach school administrators, children, and families with important safety information about school and home environments.

As a pilot project in FY92, CPSC will conduct the following activities: (1) select jurisdictions to participate in the pilot; (2) initiate communication channels to determine course of action and tools to implement the pilot objectives; (3) initiate a dialogue with national organizations that network with schools and child care constituencies to determine the best means of building communication channels; and (4) monitor the program and prepare recommendations.

National Commission to Prevent Infant Mortality

National Health/Education Consortium

Areas of Emphasis

• Policy Development; coordination of health and education services

Target Groups

• Policy Developers at the national, State, and community levels

Program Profile

In response to the growing awareness of the connection between children's health and their ability to learn, the National Health/Education Consortium has been formed.

The project, convened by the National Commission to Prevent Infant Mortality and the Institute for Educational Leadership, has brought together leaders from 50 national health and education membership organizations, representing a collective constituency of more than 12 million members. The objective is to design strategies to more effectively integrate health and education services and programs for children in this country.

The National Health/Education Consortium maintains that children must be healthy to be able to learn, and they must be educated to keep themselves healthy. Millions of infants and children, however, lack access to health care or suffer from poor health, leaving them vulnerable to physical and learning disabilities and other long-term problems such as illiteracy, dropping out of school, and juvenile incarceration. Coordination of health and education services for children can enhance their ability to learn, succeed in school and become productive members of society.

Promoting the full potential of children and providing them with the best opportunities for success will require changes in the systems which currently provide health and education services. Reforms in these systems are needed to consolidate programs, unify agencies and funding streams, and provide a more comprehensive approach to children's programs.

Activities of the National Health/Education Consortium include: developing strategies to influence public policies which govern health and education in an effort to promote closer working relationships and collaborative programs between the two systems throughout the country; identifying model programs that successfully link health and education; organizing local, State, regional, and national conferences to generate dialogue and promote coordinated action among health professionals, educators, business, advocates, and policymakers; publishing and disseminating papers on selected topics such as health education in schools, neurological precursors to learning, cultural and diversity issues in linking health and education, successful models of interagency coordination, and others; seeking out leaders in business, public policy, health, education, the media, and others for comment and involvement in the Consortium Action Plan.

Program Profile

The Food and Nutrition Information Center (FNIC) services persons seeking information or educational materials in the area of food and human nutrition. The center is part of the National Agricultural Library (NAL).

FNIC serves many kinds of users, for example, it can help school teachers implement effective nutrition programs. The center acquires books, journal articles, and audiovisual materials pertaining to human nutrition, food service management, and food science. The audiovisual collection covers a variety of media including motion pictures, film strips, slides, videocassettes, and posters. The center’s collection ranges from children’s materials to sophisticated technical information.
Topics include the relationship between diet and disease; nutrient composition; food science and technology; food service management; food safety and sanitation; U.S. food and nutrition programs; and nutrition education.

FNIC lends books and audiovisual materials, provides photocopies of journal articles, and provides comprehensive reference services, including computer searches of major databases.

Direct free borrowing privileges and/or unlimited free reference service is available for the staff of school districts and elementary and secondary school personnel (including teachers, food service staff, and school nurses).

To provide printed listings of the center's holdings, FNIC has developed the following materials:

- Comprehensive catalogs
- Subject-specific bibliographies
- Brief reading lists called PATHFINDERS

Users can visit the center personally, write or telephone, or have a local library make interlibrary loan requests.

---

232—Healthy Schools
The Rural Information Center Health Service (RICHS) is part of the Rural Information Center (RIC) at the National Agricultural Library (NAL) located in Beltsville, Maryland. NAL and the Office of Rural Health Policy in the Department of Health and Human Services jointly created RICHS as a rural health information service. RICHS is designed to collect and disseminate information on rural health issues, research findings relating to rural health, and innovative approaches to the delivery of rural health care services.
Primary users of the information center include Federal agencies, the public, and professionals.

RIC staff will:

• Assist the user in locating a variety of information sources to meet individual needs.
• Refer the user to organizations or experts in the field who can provide additional information.
• Perform brief, complimentary literature searches of computerized databases on requested topics, or exhaustive searches on a cost recovery basis.
• Furnish copies of RIC bibliographies and publications.

Youth Development Information Center

Areas of Emphasis

• Youth At Risk Programs and Initiatives

Target Groups

• Youth Workers

Program Profile

The Youth Development Information Center is a joint project of the Extension Service and the National Agricultural Library (NAL). The center provides information services to youth development professionals who plan, develop, implement, and evaluate programs designed to meet the changing needs of America's youth. It combines the technical, subject-matter expertise of the extension's nationwide education network with the information specialists and resources of the world's foremost agricultural library. The center maintains a national collection of books, journal articles, dissertations, theses, reports, curricula, and other resources relevant to youth development. All items are identified and reviewed by youth development professionals before being added to the collection.

Primary users of the information center include United States Department of Agriculture Extension Service personnel and youth and family development professionals.

Materials

• The center can provide bibliographies in several areas for youth professionals such as communication, education design, youth development, youth program management, volunteerism, or another specific topic related to youth. Brief complimentary literature searches of computerized data bases on a requested specific topic or exhaustive search in a cost recovery basis are available.

  Life skills Family life

Target Groups

• Service Providers For Military Members and Families

Program Profile

The Department of Defense Family Advocacy Program focuses on the elimination of family violence and the facilitation of effective family functioning. The Military Family Clearinghouse is the most comprehensive collection of pertinent information available to service providers and military families. The Military Family Clearinghouse maintains two information collections that cover 40 categories of military issues. It provides annotated bibliographies of each of the categories. The Military Family Clearinghouse contains model programs, training curricula, film abstracts, professional journal articles, popular magazine and newspaper articles, and other material from both civilian and military sources appropriate for designing, maintaining, or expanding programs and activities. The Military Family Clearinghouse contains military reports, dissertations, technical reports, and other written materials pertinent to military life.

Program Profile

The Educational Resources Information Center (ERIC) is a nationwide information network established in 1966 to make educational research and practice available from a single source. The ERIC system, managed by the U.S. Department of Education's Office of Educational Research and Improvement, consists of 16 subject-area clearinghouses and support components. The topic areas of health, physical education, recreation, and dance are covered by the Clearinghouse on Teacher Education.

ERIC is the largest education data base in the world, containing nearly 700,000 bibliographic records of documents and journal articles. Papers, conference proceedings, literature reviews, health and physical education curriculum materials, and articles from the leading health education journals are indexed and abstracted for entry into the data base. The full text of most documents is available in microfiche or paper copy from the ERIC Document Reproduction Service.

The ERIC Clearinghouse on Teacher Education is sponsored by the American Association of Colleges for Teacher Education (AACTE).

Materials

- Young Children on the Grow: Health, Activity, and Education in the Preschool Setting (monograph; $20.00)
- Drug and Alcohol Prevention Education (Digest; free)
- Childhood Obesity (Digest; free)
- Exercise Adherence (Digest; free)
- Adolescents and AIDS (Digest; free)
- Credentialing in the Health, Leisure, and Movement Professions (Trends and Issues paper)

Program Profile

This information center has been operating for over 20 years, first as "Closer Look," then as the National Information Center for Children and Youth With Disabilities (NICHCY). NICHCY responds to requests for information on all disabilities and related issues. NICHCY operates through the Clearinghouse for the Handicapped programs authorized by Section 633 of Part D of the Education of Individuals with Disabilities Act (20 U.S.C.) as amended by P.L. 99-457 and P.L. 101-476.

NICHCY is funded by the Office of Special Education Programs. NICHCY staff respond to questions and produce publications and other materials on issues and current topics.

National Clearinghouse for Primary Care Information

Areas of Emphasis

- Health Services

Target Groups

- Community

Program Profile

The National Clearinghouse for Primary Care Information (NCPCI) is designed to assist administrators and practitioners in accessing information and obtaining materials that will support the delivery of high quality health care at the community level. Publications distributed by NCPCI include manuals, handbooks, and resource guides that will be of special interest to professionals working in primary care centers funded by the Bureau of Health Care Delivery and Assistance (BHCDA). All publications are available free of charge.

Primary users of the clearinghouse include Federally funded community and migrant health centers; State primary care offices; central and regional offices of the Department of Health and Human Services; and the general public.

Program Profile

The Combined Health Information Database (CHID) is a computerized bibliographic data base of health information and health education/health promotion resources developed and managed by the U.S. Public Health Service. At present, there are 17 subfiles on CHID with more than 60,000 abstracted items. Examples of CHID subfiles include AIDS Education, AIDS School Health Education, and Health Promotion and Education.
The Health Promotion and Education data base contains more than 19,000 entries describing health promotion/health education information including school health education, family life and sex education and worksite health promotion and education.

The AIDS School Health Education Subfile contains 765 records, including programs, curricula, guidelines, policies, regulations, and materials (some records are full text). The intended audience is education and health professionals.

CHID is a unique reference service for all health professionals—physicians, nurses, health educators, etc.—who need to locate health information. The data base provides bibliographic citations for major health journals, books, reports, pamphlets, audiovisuals, hard-to-find information sources, and health education/health promotion programs underway in State and local health departments and other locations. In addition, CHID provides source and availability information for these materials, so that users may obtain them directly.

---

**Materials**

- The Health Promotion and Education Subfile contains abstracts describing journal articles, books, book chapters, manuals, program descriptions, teaching guides, reports, and papers related to school health. Database records list resources where items may be obtained.

Program Profile

The National AIDS Clearinghouse was established by the Centers for Disease Control National AIDS Information and Education Program in October 1987 to provide HIV/AIDS reference, referral, and publications distribution services to health care and other professionals who work in a variety of settings such as State AIDS programs, community-based organizations, AIDS service organizations, businesses, schools, and associations and who have a need for accurate HIV/AIDS education and prevention information.

The clearinghouse acquires, organizes, reviews, updates, and distributes HIV/AIDS prevention and education information. This information is synthesized and entered into three online databases developed and maintained by the National AIDS Clearinghouse: Resources and Services, Educational Materials, and Funding Databases. Additionally, reference specialists have direct access to the AIDS School Health Education Database developed.
and produced by the Centers for Disease Control's Center for Chronic Disease Prevention and Health Promotion. Clearinghouse reference specialists use these information data bases to respond to caller's needs to identify and locate educational materials, organizations, and funding sources for specific audiences and locations. Through the National AIDS Clearinghouses one can:

- Identify organizations—clinics, hospitals, extended-care facilities, public health departments, commercial enterprises, community-based organizations, and religious groups—which offer HIV/AIDS-related services.
- Locate hard-to-find educational materials—brochures, pamphlets, State reports, posters, and audiovisuales—and find out how to obtain copies.
- Locate teaching guides, curricula, and other resources for educators to use to teach children and youth about HIV infection and AIDS.
- Identify the latest HIV-related news, statistics, upcoming events and Centers for Disease Control reports and policy statements through the electronic bulletin board.
- Order multiple or single copies of HIV and AIDS information publications, America Responds to AIDS (ARTA) media campaign materials, and selected videotapes.
- Receive personalized assistance from bilingual information specialists who speak English, Spanish, and French.

**Materials**

- *AIDS Prevention Guide* (Information packet. Also available in Spanish)
- *How You Won’t Get AIDS* (4 color posters for youth)
- *Catalog of HIV/AIDS Materials for Professionals*
- *Guidelines for Effective School Health Education to Prevent the Spread of AIDS*
- *American Responds to AIDS Materials Catalog* (posters and brochures)

Program Profile

Materials available from the Food and Drug Administration (FDA) Communications Staff serve the broad agency objectives of educating consumers and food and drug officials about FDA policies and regulatory actions that affect the public health and about the safe use of products regulated by FDA. They are also an integral part of FDA's disease prevention and health promotion program in that it is often at the forefront of important public health issues like food safety, AIDS, and quackery. Statutory authority for FDA printed materials is contained in the Federal Food, Drug, and Cosmetic Act, 52 Stat. 1040, Section 705 (Section 375 of the U.S. Code, Title 21). The various information available is on foods, drugs, cosmetics, veterinary medicine, medical devices, and radiological health. The materials available would be valuable research tools for any student interested in the topics mentioned in the previous sentence.

Primary users of these materials include the general public, health professionals, libraries, schools, colleges, Federal agencies, and State and local agencies.
Materials

- Acne: Taming That Old-Age Adolescent Affliction (reprint)
- Childhood Vaccines: A Responsibility to Remember (reprint)
- Keeping up With the Microwave Revolution (reprint)
- Have You Read any Good Labels Lately? (exhibit)
- Food Safety Series (video news release)
- Food for Thought (slide show/video)
- Eating Disorders: When Thinness Becomes an Obsession (report)
- From Test Tube to Patient: New Drug Development in the U.S. (booklet)
- Anabolic Steroids: Losing at Winning (brochure, video news release)
- A Story About Brian (poster on Reye Syndrome)
- On Yeast Infections and Other Female Irritations (reprint)
- Condoms and Sexually Transmitted Disease...Especially AIDS (brochure)

Clearinghouses and Information Centers—253
Program Profile

The National Center for Education in Maternal and Child Health (NCEMCH) provides information and educational services, as well as technical assistance, to organizations, agencies, and individuals with maternal and child health interests. NCEMCH began as a genetics clearinghouse in 1982 and is funded by the Maternal and Child Health Bureau, U.S. Department of Health and Human Services. The center responds to information requests, maintains a reference collection of Maternal and Child Health program materials, develops publications on maternal and child health topics, and provides technical assistance in educational resource development, program planning, and topical research. Materials include books, reports, pamphlets, government publications, patient education materials, newsletters, and information about 1,400 organizations that offer in-depth information on specific topics. Among its staff of subject specialists is an adolescent health specialist who can provide customized information and assistance on the topic of school health.

Program Profile

The mission of the clearinghouse is to facilitate the transfer of information from research in the field of maternal and child health to policymakers, program planners, and health care professionals in order to maintain and to improve the health of mothers and children. The clearinghouse accomplishes this mission by serving as a repository and distributor of state-of-the-art information materials developed or funded by the Maternal and Child Health Bureau. Most materials are distributed at no cost to the recipient and include monographs, books, booklets, pamphlets, posters, and a limited number of videotaped materials.

Materials

- Adolescent Fathers—Directory of Services
- Adolescent Health Abstracts of Active Projects
- Adolescent Health Catalog of Products
- Bridging Ethnocultural Diversities in Social Work and Health

Program Profile

The information center is a service offered by the National Heart, Lung, and Blood Institute (NHLBI) of the National Institutes of Health. The information center supports five major educational efforts: the National High Blood Pressure Education Program, the National Cholesterol Education Program, the National Blood Resources Education Program, the National Asthma Education Program, and the NHLBI Smoking Education Program. The information center distributes limited quantities of pamphlets, fact sheets, posters, and other publications produced by NHLBI and other agencies. Subject specialists are also available to respond to public and professional inquiries. The information center contributes its data base on education materials to the Combined Health Information Database (CHID) which is available through BRS, an online vendor.

Primary users of the information center include Federal agencies, the public, health professionals, and consumers.

Alzheimer's Disease Education and Referral Center

Areas of Emphasis

- Health Education
  - Information

  Subject Matter:
  Alzheimer's disease

Target Groups

- Students
  - High school
- Faculty and Staff
- Community

Program Profile

The Alzheimer's Disease Education and Referral (ADEAR) Center was established by the National Institute on Aging as mandated by the Alzheimer's Disease and Related Services Research Act of 1986. The center officially opened in 1990.

The ADEAR Center maintains and disseminates information on current research efforts and findings and distributes publications on a wide variety of topics related to Alzheimer's Disease. The center also maintains an Alzheimer's Disease subfile as part of the Combined Health Information Database (CHID), which is a bibliographic, online data base supported by several agencies of the U.S. Public Health Service. Although most of the materials distributed by the ADEAR Center are targeted to a health professional audience, there are several publications that may also be used in health education efforts at the high-school level. These publications are general in nature and may also be useful for faculty, staff, and the community.

Materials

- Q & A on Alzheimer's Disease
- Age Page: Confusion and Memory Loss in Old Age: It's Not What You Think
- Alzheimer's Disease Fact Sheet

- **Health Profession Advocates, Industry, Public**

Program Profile

The National Institute on Deafness and Other Communication Disorders (NIDCD), one of the thirteen institutes in the National Institutes of Health established by law, conducts and supports research and research training on normal mechanisms as well as diseases and disorders affecting hearing and other communication processes, balance, smell, taste, voice, speech, and language. The legislation that established the institute mandated the formation of a national clearinghouse. The objectives of the clearinghouse include: responses to information requests; coordination of the vast amount of information that already exists in the field of communication sciences; distribution to health professionals, patients, industry, and the public; and elimination of duplication.
of information by establishing a central resource center that will provide access to current information held by other sources.

Primary users of the clearinghouse include health professionals, patients, industry, and the general public.

Materials

- Public Education Campaign: Prevention of Noise-Induced Hearing Loss (target audience: 3rd-6th grade)
- Teachers Packet: Teacher’s Guide (available in English and Spanish)
- Hearing Loss, Hope Through Research
- Development Speech and Language Disorders, Hope Through Research
- Dizziness, Hope Through Research
- Stuttering, Hope Through Research

National Diabetes Information Clearinghouse

Areas of Emphasis

- Health Education
  Information

  Subject Matter:
  Diabetes

Target Groups

- Students
  Elementary
  Middle school/junior high
  High school

- Parents
- Faculty and Staff
- Community

Program Profile

The National Diabetes Information Clearinghouse (NDIC) was established in 1978 to increase knowledge and understanding about diabetes among patients, health professionals, and the public. To carry out this mission, NDIC works closely with the diabetes community, forming a network that identifies and responds to informational needs about diabetes and its care.

NDIC responds to requests for information about diabetes and its complications and distributes information appropriate to health professionals, people with diabetes and their families, and the general public. Responses span a wide range of topics, from information about available patient education materials to statistical data from the National Diabetes Data Group about clinical and epidemiological characteristics of diabetes.

To encourage health professionals and staffs of health organizations to develop high-quality educational materials and programs about diabetes, NDIC distributes resource materials for planning and implementing educational programs and evaluating educational materials.

NDIC maintains an automated file of brochures, audiovisual materials, books, articles, teaching manuals, factsheets, and other educational materials on the Combined Health Information Database (CHID), described elsewhere in this directory.

Clearinghouses and Information Centers—273
Materials

• Topical bibliographies
• Diabetes Dateline (newsletters)
• The Diabetes Dictionary (illustrated glossary of terms)
• Other publications include patient booklets about diabetes, conference proceedings, monographs, reprints, and materials developed by the National Institutes of Health about diabetes research and care.

Areas of Emphasis

- Health Education
  Information

Subject Matter:
Digestive diseases

Target Groups

- Students
  Middle school/junior high
  High school
- Parents
- Faculty and Staff
- Community

Program Profile

The Digestive Diseases Clearinghouse is a congressionally mandated service of the National Institute of Diabetes, Digestive and Kidney Diseases of the National Institutes of Health. Since 1980, the clearinghouse has provided information about digestive diseases to educate the public, patients and their families, as well as physicians and other health care providers.

The clearinghouse provides an inquiry and referral service that responds to professional and public requests. The clearinghouse also maintains a subfile of the Combined Health Information Database (CHID), containing references to literature, products, programs, and services for patient education about digestive diseases.

Materials

- Fact sheets about specific digestive diseases
- Information about research developments and organizational and governmental activities related to digestive diseases

National Kidney and Urologic Diseases Information Clearinghouse

Areas of Emphasis

- Health Education Information

  Subject Matter:
  Kidney and urologic diseases

Target Groups

- Students
  Middle school/junior high
  High school
- Parents
- Faculty and Staff
- Community

Program Profile

The National Kidney and Urologic Diseases Information Clearinghouse (NKUDIC) is a resource and referral service established by the National Institute of Diabetes, Digestive and Kidney Diseases in 1987. The clearinghouse, authorized by Congress, is designed to increase the knowledge and understanding of patients, health care professionals, and the public about kidney and urologic diseases. NKUDIC gathers and disseminates education information produced by many sources.

NKUDIC responds to requests for information from health professionals, patients, and the public.

Materials

- Publications prepared by the National Institute of Diabetes, Digestive and Kidney Diseases
- Computerized data base of educational materials about kidney and urologic diseases—this subfile is available to the public on the Combined Health Information Database (CHID)
- Bulletin targeted toward professionals
- Annotated bibliographies and topical literature searches on selected topics on kidney and urologic diseases

National Clearinghouse for Alcohol and Drug Information

Areas of Emphasis

• Health Education
  Curricula
  Program strategies, approaches, media

  Information

  Personnel training

  Subject Matter:
  Alcohol or other drugs
  Physical fitness

  Tobacco

  HIV/AIDS related to drug use

• Worksite Health Promotion for Faculty and Staff
• School and Community Health Promotion

Target Groups

• Students
  Preschool
  High school
  Elementary
  Students with special needs/special education

  Middle school/junior high

• Parents
• Faculty and Staff
• Out-of-School, High-Risk Youth
• Community

Program Profile

The National Clearinghouse for Alcohol and Drug Information (NCADI) is a service of the Office for Substance Abuse Prevention (OSAP). OSAP was created by the Anti-Drug Abuse Act of 1986 to reduce the demand for illicit drugs and to prevent alcohol and other drug problems in the U.S. The Anti-Drug Abuse Act of 1988 greatly expanded the scope and functions of OSAP and increased its responsibilities.

The mission of NCADI is (1) to promote and distribute prevention materials including brochures, posters, videotapes, resource guides, directories, and program descriptions; (2) to disseminate Federal Government publications on alcohol and other drug topics; (3) to develop and maintain its in-house data base of popular press and scholarly journal articles on prevention, intervention, and treatment; and (4) to coordinate the Regional Alcohol and Drug Awareness Resource (RADAR) Network, which facilitates access to information at the State and local level.
NCADI is useful to those interested in school health because NCADI can supply school health professionals with:

1) Prevention materials for distribution in the classroom, at assemblies, and at special anti-drug events.
2) Materials designed to help parents prevent substance abuse among their children.
3) Materials to assist with the planning and implementation of a worksite drug policy for school faculty, staff, and administrators.
4) Materials designed to assist with the selection and implementation of a drug prevention curriculum.
5) Listings of drug prevention curricula available from various organizations.

Primary users of the clearinghouse include students, school administrators, school counseling personnel, substance abuse prevention specialists, policymakers, workplace drug program coordinators, local officials, the media, and the general public.

---

**Materials**

- *The Fact Is...The Use of Steroids in Sports Can Be Dangerous* (MS391 Fact Sheet/Resource Listing)
- *What Works: Schools Without Drugs* (PHD006 Booklet)
- *The Fact Is...You Can Form a Student Assistance Program* (MS374 Fact Sheets/Resource Listing)
- *The Fact Is...Reaching Hispanic/Latino Audience Requires Cultural Sensitivity* (MS406 Fact Sheet/Resource Listing)
- *Prevention Resource Guide: Preschool Children* (MS409)
- *Prevention Resource Guide: Asian and Pacific Islander Americans* (MS408)
- *Youth and Drugs: Society's Mixed Messages. OSAP Prevention Monograph #6* (BK172 Book)
- *AIDS: Another Way Drugs Can Kill* (AV187 Poster)
- *McGruff: Say "No" to Crack and Other Drugs* (AVD14 Poster)
- *Digale Que No* (PH283 Spanish "Just Say No" booklet for kids)
- *Ayudando a Sus Hijos a Decir Que No/Helping Your Children Say No* (PH283 Spanish Booklet)
- *Ayudando a Sus Alumnos a Decir Que No/Helping Your Students Say No* (PH284 Spanish Booklet)
- *10 Pasos Que Ayudaran a Sus Hijos a Decir "No": Guia Practica/10 Steps to Help Your Child Say "No": Quicklist* (PH287 Spanish Booklet)

Because NCADI has over 600 items in its inventory, it is advisable to request the NCADI Catalog which describes materials and services available.

280—Healthy Schools
National Resource Center on Worksite Health Promotion

Areas of Emphasis

• Worksite Health Promotion for Faculty and Staff

Target Groups

• Faculty and Staff

Program Profile

The National Resource Center on Worksite Health Promotion is a collaborative effort of the Washington Business Group on Health (WBGH) and the Office of Disease Prevention and Health Promotion (ODPHP) of the U.S. Public Health Service. The resource center provides reliable information and supports sound life skills in the area of health promotion and disease prevention at the worksite.

The center operates a computerized data base of information designed to support life skills and planning. The data base includes detailed descriptions of successful worksite programs and policies, services and resources available through other organizations, abstracts and summaries of selected research and evaluation studies, implementation guidelines, and a variety of policy documents including Federal and State regulations, organizational mission statements, and policy analyses relevant to worksite health promotion.

In addition to the data base, the resource center regularly convenes expert groups to examine critical issues in the field of worksite health promotion, with particular attention paid to the needs of small businesses, public employers, and "hard-to-reach" populations. Central to all resource center initiatives are the worksite-related goals set forth in Healthy People 2000: National Health Promotion and Disease Prevention Objectives.

Priority goals of the resource center include gathering and disseminating information in the following areas:

1) Effectiveness of worksite programs and policies in terms of improved health and quality of life, productivity, and cost savings;

2) Integration of worksite health promotion programs with employee benefits and other corporate functions;

3) Targeted strategies which meet the special needs of small businesses, individual occupations, and diverse industries.

Primary users of the resource center include employers and employees.
Materials

- *Achieving the Year 2000 Health Objectives for the Nation: Strategies For Business and Labor* (monograph)
- *Financial Incentives for Healthy Lifestyles: Potential and Pitfalls* (monograph)
- *Worksite Wellness* (series of background papers)

Program Profile

The Office of Disease Prevention and Health Promotion (ODPHP) National Health Information Center (ONHIC) is a health information referral organization putting people with health questions in touch with those organizations that are best able to answer. Established in 1979 by ODPHP, the center’s main objectives are to:

• Identify health information resources;
• Channel requests for information to these resources; and
• Develop publications on health-related topics of interest to health professionals, the health media, and the general public.

The center meets these objectives by using a variety of health information resource materials, a data base of health-related organizations, and an information referral system.

ONHIC has developed resource lists for each of the priority areas for Healthy People 2000: National Health Promotion and Disease Prevention Objectives.

A variety of directories and resource lists are available which can be used to identify sources of materials with school health applications. In addition, ONHIC can help people locate information on school health services and on the school as a healthy environment.
The center was established in 1979 as a service of ODPHP in the U.S. Public Health Service, U.S. Department of Health and Human Services. This was in response to Title XII of the Public Health Service Act (the National Consumer Health Information and Promotion Act of 1976, PL 94-317, as amended).

Office of Minority Health Resource Center

Areas of Emphasis

- Health Education

  **Subject Matter:**
  - Alcohol or other drugs
  - Injuries/safety
  - Cancer
  - Cardiovascular health
  - Nutrition
  - HIV/AIDS
  - Violence/conflict resolution
  - Tobacco

- School and Community Health Promotion
- Information

Target Groups

- Faculty and Staff
- Community
- Health Professionals

Program Profile

The U.S. Department of Health and Human Services, Public Health Service, Office of Minority Health (OMH), Office of Minority Health Resource Center (OMH-RC) was established by the U.S. Department of Health and Human Services, OMH in October 1987. The resource center maintains information on health-related resources; which target Asian/Pacific Islanders, Blacks, Hispanics/Latinos, and Native Americans; and are available at the Federal, State, and local levels. In addition to serving as a central source of minority health information, OMH-RC works with OMH in identifying information gaps and stimulating the development of resources where none exist. The resource center staff are available to answer requests from consumers and health professionals, and bilingual staff are available to assist Spanish-speaking requestors. The activities of OMH-RC concentrate on the following topics: cancer; chemical dependency; diabetes, heart diseases, and stroke; homicide, suicide, and unintentional injury; and infant mortality. OMH-RC maintains a computerized data base of minority health-related publications, organizations, and programs which concentrate on minority health priority areas and associated risk factors. The data base includes sources of free or low-cost services and materials relating to minority health issues. OMH-RC has also established a network of professionals active in a variety of disciplines that can provide expert technical assistance to minority-based community organizations, voluntary groups, and individuals.
Materials

- OMH-RC has prepared a series of fact sheets entitled *Closing the Gap*, on each of the minority health areas, i.e., cancer, chemical dependency, diabetes, heart disease/stroke, homicide/suicide/unintentional injury, infant mortality, and AIDS. The series describes the extent to which specific groups are affected, details avenues for prevention, and offers sources of additional information. Health material resource lists on Asian/Pacific Islanders, Blacks, Hispanics, Native Americans; funding; and audiovisual materials are available. Other publications that focus on minority health-related issues are also available through the resource center.

Family Life Information Exchange

Areas of Emphasis

- **Health Education Information**

**Subject Matter:**
Family life/abstinence

Target Groups

- **Students**
  - Middle school/junior high
  - High school
- **Faculty and Staff**
- **Out-of-School, High-Risk Youth**

Program Profile

The Family Life Information Exchange distributes various Department of Health and Human Services publications on family planning, adolescent pregnancy, and adoption. The exchange is a service of the Office of Populations Affairs. The patient and professional education materials are available free of charge in limited quantities. The exchange distributes a pamphlet on adolescent abstinence that might be useful to school health programs.

Primary users include Title X- and Title XX-funded agencies and health service providers.

Materials

- *Teenage Pregnancy and Fertility in the U.S.*
- *Many Teens Are Saying No* (pamphlet: free of charge)
- *OAPP Funded Curricula*

• Health Education
  Curricula Information Personnel training
  Program strategies, approaches, media

  Subject Matter:
  Violence/conflict resolution Injuries/safety Family life
  Child abuse and neglect

• School and Community Health Promotion

Target Groups

• Students
  Preschool Elementary Middle school/junior high
  High school Students with special needs/special education

• Parents

• Faculty and Staff

• Community

Program Profile

The Clearinghouse on Child Abuse and Neglect Information serves as a resource center for the acquisition and dissemination of child abuse and neglect materials. Authorized under Public Law 100-294, the clearinghouse is the information component of the National Center on Child Abuse and Neglect (NCCAN), which is located within the U.S. Department of Health and Human Services. At the core of the clearinghouse is a 14,000 entry data base consisting of child abuse and neglect related documents. Standardized and specialized bibliographies are available, as are Federal grant reports and curricula. Literature searches of the data base can be obtained from the clearinghouse. The data base is also directly available to the public through DIALOG Information Services, Inc.
Insofar as child maltreatment and family violence impact on the health of the Nation's children, anyone in school education/health may find the information useful. In addition, school personnel are among those mandated to report child abuse and neglect. Materials for children on the topic of sexual abuse are also available.

Primary users of this clearinghouse include professionals and the public.

Materials

- *The Educator's Role in the Prevention and Treatment of Child Abuse*
- *Early Childhood Education Professionals: Preventing and Responding to Child Maltreatment*

- **Community**

Program Profile

The Clearinghouse on Family Violence Information was established in 1987 by Public Law 98-457, the Family Violence Prevention and Services Act (FVPSA). The goal of the clearinghouse is to provide information and services to practitioners and researchers who are working to prevent family violence and provide assistance to victims. The clearinghouse is supported by FVPSA funds and is coordinated through the Clearinghouse on Child Abuse and Neglect Information. Currently, 7 publications and 21 bibliographies are available.
Information from the Family Violence Clearinghouse can be used in curriculum development or in conflict resolution training.

Primary users of the clearinghouse include researchers, practitioners, Federal agencies, and State and local agencies.

Materials

- *Family Violence: An Overview* (Free)
- *Effects of Family Violence* ($4.00)
- *Medical Aspects of Family Violence* ($2.00)

The National Injury Information Clearinghouse

Areas of Emphasis

- Health Education
  Information (injury statistics related to consumer products)

Subject Matter:
Injuries/safety

Program Profile

In creating the Consumer Product Safety Commission (CPSC) in 1973, Congress emphasized widespread sharing of information by the new agency. According to the Consumer Product Safety Act, Sec. 5(a)(1), the National Injury Information Clearinghouse exists "to collect, investigate, analyze, and disseminate injury data and information relating to the causes and prevention of death, injury, and illness associated with consumer products."

The clearinghouse maintains thousands of detailed investigative reports of injuries associated with consumer products. It has access to automated data bases with several million incidents of injuries that have been reported by a nationwide network of hospital emergency departments. Product-associated deaths extracted from death certificates also provide a major information resource.

Educators may base class assignments on clearinghouse data and encourage their students to place requests for information directly.

Materials

- The clearinghouse distributes publications such as hazard analyses, special studies, and data summaries. These reports identify hazards, accident patterns, and types of products. Lists of available titles as well as the documents themselves may be obtained by writing the clearinghouse. There may be charges for material requested.
