Statewide estimates of crime trends derived from a sample of reporting jurisdictions appear to mirror closely the trends calculated from final data covering all jurisdictions. For example, the 1991 estimates published one year ago compared closely to the final 1991 statewide data reflecting all jurisdictions in the State (See table at left.) In categories where the estimated percent change is very close to zero (e.g. robbery with -0.2%), the final statewide totals may shift sufficiently to produce a small positive percent change.
