REPORTS FROM THE LEAA POLICE EQUIPMENT SURVEY:

The present report is one in a series of reports produced from data gathered by the LEAA Police Equipment Survey of 1972. Listed below are the seven reports of that survey.

- National Bureau of Standards Report 73-215 (The present report). LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume WI: Body Armor and Confiscated Weapons.
- National Bureau of Standards Report 73-210. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume I: The Need for Standards -- Priorities for Police Equipment.
- National Bureau of Standards Report 73-211. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume II: Communications Equipment and Supplies.
- National Bureau of Standards Report 73-212. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume III: Sirens and Emergency Warning Lights.
- National Bureau of Standards Report 73-213. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume IV: Alarm Displays, Security Equipment, and Surveillance Equipment.
- National Bureau of Standards Report 73-214. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume V: Handguns and Handgun Ammunition.
- National Bureau of Standards Report 73-216. LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume VII: Patrolcars.

U. S. DEPARTMENT OF COMMERCE, Frederick B. Dent, Secretary NATIONAL BUREAU OF STANDARDS, Richard W. Roberts, Director

ACKNOWLEDGEMENTS

We are grateful to the 440 police departments throughout the United States who contributed their time and knowledge to make this report possible. Special thanks to the police departments whose officers and administrators helped the survey team during the developmental testing phases of the work. In addition, we thank Jacob J. Diamond, Chief of the Law Enforcement Standards Laboratory, for sharing his knowledge. The support and assistance of Lester Shubin, NILECJ, project monitor and consultant, is also gratefully acknowledged.

Although there are only three authors for this report, the work could not have been accomplished without the capable and conscientious efforts of the many members of the Technical Analysis Division who provided support for the whole survey effort:

William L. O'Neal for his help in computerizing the sample selection and for helping to design and program the interactive record-keeping system; Jenny L. Eldreth and P. Clare Peiser for maintaining the computerized record-keeping system; Sandra J. Mumford for supervising the coding/editing of the questionnaires; June R. Cornog, for her advice, support and help with initial interviews; Diane R. Beall for the many typings of the various versions of the questionnaires; Suellen Halpin, Mary L. Friend, Susan E. Bergsman and Dwight F. Doxey, for making follow-up telephone calls; Lorraine S. Freeman for her administrative support; Karen Jackson, a summer employee, for her help with questionnaire coding and record-keeping; Cassandra Streeter and Janice Davis, summer employees, for their help with record-keeping; and Jo A.E. Copeland for typing the report.

Michael R. Vogt receives special thanks for his help in carrying out the computerized edit and tabulation of the data. We also gratefully acknowledge the help of Robert J. Cunitz, in editing and reviewing the report.

EXECUTIVES' SUMMARY:

I. SUMMARY OF BACKGROUND AND METHODOLOGY

A. Background (pp. 1-2)

- Law Enforcement Standards Laboratory (LESL) was established in 1970 and became part of the NILECJ Equipment Systems Improvement Program (ESIP).
- NILECJ asked the Behavioral Sciences Group of the National Bureau of Standards to develop and carry out a procedure to get information from the users of law enforcement equipment.
- o "User" information would aid NILECJ in setting priorities for LESL programs and would provide some detailed information so that research to develop standards could begin.
- o In addition, gathering information from the users would help to make police agencies aware of LESL and ESIP.
- A nationwide mail sample survey was selected as the best procedure to collect user information.
- o An Equipment Priorities Questionnaire (EPQ) and six Detailed Questionnaires (DQs) were developed and administered. A separate report was prepared for each of these seven questionnaires.

B. Design of Questionnaires (pp. 8-10)

- o Questionnaires were developed in conjunction with NILECJ, LESL, and cooperating police departments. Questionnaires were pretested at various times with approximately 40 police departments.
- o The EPQ was designed to provide information about priority needs for standards for various types of equipment.
- o In addition, the EPQ asked for data about numbers of fulland part-time officers, activities performed in the department, budget, size of jurisdiction, etc.
- The six DQs (Alarms, Security and Surveillance Equipment; Communications Equipment and Supplies; Handguns and Handgun Ammunition; Sirens and Lights; Body Armor and Confiscated Weapons; and Patrolcars) were each developed separately.

The DQs asked about kinds and quantities of equipment in use, problems with existing equipment, suggestions for improving equipment, needs for standards related to the equipment, etc. Although entitled Detailed Questionnaires, these questionnaires were designed to give an overview of the use of specific items of equipment.

C. Sample (pp. 2-6)

- The population sampled was made up of all police departments listed in a computerized file compiled and maintained by the LEAA Statistical Service.
- Courts, correctional institutions, forensic labs, special police agencies, etc., were excluded.
- The sample was stratified by LEAA Geographical Region (10 Regions) and by Department Type (7 Department Types: State Police; County Police and Sheriffs; City Departments with 1-9 Officers; City Departments with 10-49 Officers; City Departments with 50 or more Officers, excluding the Fifty Largest Cities; the Fifty Largest U.S. Cities by population; and Township Departments).
- o Overall, approximately 10% of the 12,836 departments in the population were selected as respondents (see Table 1.2-2).
- o The Equipment Priorities Questionnaire was sent to every sample department (1386). Each Detailed Questionnaire was sent to all States, to all of the Fifty Largest Cities, and to a randomly selected subsample of the main sample (about 530 departments received each DQ).
- o Thus, States and the Fifty Largest Cities were asked to fill in all seven questionnaires. Each of the remaining 1186 departments were asked to fill in the EPQ and two of the DQs.
- The sample for the Body Armor DQ consisted of 529 departments (see Table 1.2-3).

D. Questionnaire Administration (p, 6)

- Stringent control of administration was required.
- Introductory letters were sent to heads of departments asking cooperation.
- o On June 1, 1972, questionnaire packages were mailed.
- o In July 1972, follow-up by self-return postcard was begun.

- □ In August 1972, follow-up by telephone was begun. Departments which had not returned questionnaires were called. Also, calls were made to clear up ambiguities in the returned questionnaires. About 1300 calls were made. About 70% of the sample departments were called at least once.
- The responses from each questionnaire were edited and coded by by a specialized team to ensure consistency; the data were then keypunched and tabulated.
- o Completed questionnaires were accepted for tabulation through January 7, 1973.

E. Rates of Return (pp. 8-9)

- o 83% of the 529 departments returned usable Body Armor DQs, (83% of the 1386 departments returned usable EPQs).
- o 81 85% of the other DQ subsamples returned usable question-naires.
- o Highest rates of return for the Body Armor DQ (over 90%) were from States, the Fifty Largest Cities, and Cities with 50 or more officers.
- 6 Lowest rates of return for this DQ were from Counties and Town-ships (less than 75%).

F. Characteristics of Responding Departments (pp. 10-14)

- The activities most commonly carried out by the respondents (to the EPQ) were Serving Traffic and Criminal Warrants (88%), Traffic Safety and Traffic Control (87%), and Intra-departmental Communications (87%).
- All of the responding Fifty Largest Cities said they provided In-House Training and Criminal Investigations. This compared to 68% and 86%, respectively, of all responding departments.
- Only 13% of all respondents had Crime Laboratories. 73% of the Fifty Largest Cities and 55% of the States had Crime Laboratories.
- About three-fifths of the departments in all Department Types were providing Emergency Aid and Rescue, ranging from 60% of the Cities with 50 or More Officers to 67% of the Counties.
- o Overall, the reported Equipment Budgets represented somewhat over 10% of the Total Budgets reported.

- Among Department Types there was a wide range of total equipment expenditures, from a mean of about \$10,000 for Cities with 1-9 Officers to a mean of almost \$2.6 million for the Fifty Largest Cities.
- One of the Fifty Largest Cities reported an Equipment Budget of \$40 million.
- Overall, the Fifty Largest Cities reported a mean of 2491 Full-Time Sworn Officers; however, one of the Fifty Largest Cities had 27% of the total reported by that Department Type and another had about 12%.

G. Presentation of Data (pp. 16-17)

- o Data in this report are presented in two forms: Text tables and full tables (Appendix B). Text tables do not always present a complete break out of the data.
- O All tables (text and full) present the data in unweighted form, (i.e., numbers and percentages of the responding departments from the sample for this questionnaire, not figures that have been weighted to expand the data to the total population or police departments in the U.S.).
- The sample selected for this questionnaire was <u>not</u> proportional to the total population of police departments. If decisions are to be made which require estimates of population figures, the appropriate extrapolation must be performed.

II.. SUMMARY OF RESULTS

A. Characteristics of Respondents (pp. 17-19)

- The Body Armor Questionnaire was generally filled in by high ranking officers—the Chiefs or Sheriffs of smaller departments and Sergeants, Lieutenants, or Captains in larger departments.
- Most of the responding officers had been in law enforcement work for several years: more than 80% had been in law enforcement work for 6 or more years.

B. Use of Body Armor (pp. 19-24)

Within every Department Type, half or more of the responding departments said that body armor should be hidden when worn in "potentially explosive (crowd control) situation".

- Departments in the 50 Largest Cities were least clear cut in their opinions 50% said body armor should be hidden in such a situation and 41% said it should be visible.
- o The most common reasons for body armor to be hidden when worn in "potentially explosive situations" were Snipers Are Less Likely to Aim for Vulnerable Areas and Body Armor Tends to Incite Crowds.
- Reasons for body armor to be <u>visible</u> in such situations were: Shows That Officer Is Prepared, Has a Deterrant Effect on Crowd, and Has Psychological Effect on Officer and/or Crowd.
- The majority of responding departments said they would routinely use body armor for Sniper Situations and "Man With A Gun" Calls if an appropriate body armor were available.

C. Use of Other Ballistic Protective Equipment (pp. 24 - 29)

- Small percentages of the 440 responding departments were using or were planning to use ballistic protective equipment other than body armor.
- o Those responding departments which were using or planning to use "other" ballistic protective items were more likely to be using Ballistic Shields or Ballistic Helmets than Armored Cars or Patrolcar Armor.
- Fewer than 20% of the responding Counties, Townships, Cities (1-9), and Cities (10-49) were using or planning to use each of those four ballistic protective items.
- About 1/3 of the responding 50 Largest Cities and Cities (50+) were or would be using Hand-Held Ballistic Shields.
- About 1/4 of the responding States were or would be using Ballistic Helmets.
- o Almost 1/3 of the responding 50 Largest Cities were using or planning to use Armored Cars.
- o 61% of the 50 Largest Cities were using at least one of the four items of ballistic protective equipment at the time of the survey. Only 36% of the responding States and 28% of the Cities (50+) were using any of the items. 20% or less of the responding departments in the other four Department Types were using any of those items.
- o The 50 Largest City and City (50+) departments were the Department Types most likely to make comments about or describe problems with body armor or ballistic protective equipment.

D. Availability of Data on Officers' Wounds (pp. 29-36)

- The seven Department Types differed greatly in the percentages of departments which kept detailed records on officer wounds and injuries by knife or gun.
- o More than half of the responding States, 50 Largest Cities, Cities (50+), and Cities (10-49) said they kept such detailed records. High percentages of the departments in small Department Types said they had never had an officer killed or injured by knife or gun.
- o Most of the responding departments which kept detailed records said those records were detailed enough to determine the Caliber and Type of Gun, the Type of Bullet Used, and the Distance From Which the Shot was Fired.
- Only 7% of the responding departments which kept such detailed records said they would not be willing to make these records available to researchers.
- Most of the 50 Largest Cities with records kept summaries of those detailed records on officer injuries, and more than half of the departments in the other Department Types kept summaries.
- o These summaries tended to be as detailed as the records themselves.

E. Confiscated Weapons (pp. 36-48)

- Data supplied for questions about confiscated weapons were accepted "as they were", and there were ambiguities which made these data unusable for estimating total numbers of handguns confiscated in the U.S. by police departments.
- A majority of the responding departments in five of the six Department Types did report numbers of weapons confiscated. However, only about 1/3 of the responding States supplied those data.
- o Responding Counties said they confiscated nearly as many shoulder weapons as handguns in 1971 and 1970. City Department Types, however, reported about twice as many handguns as shoulder weapons confiscated.
- The 50 Largest City departments reported 2-3 times as many confiscated handguns per department as did responding State departments. Responding States reported 9-12 times as many confiscated handguns per department as did City (50+) departments.

Responding States and 50 Largest Cities tended to actually destroy greater proportions of their confiscated handguns, whereas smaller Department Types tended to report much higher proportions of confiscated handguns Returned to Owner or Agent of Owner.

1.0 INTRODUCTION

1.1 Project Background

During the past several years, law enforcement agencies in the United States have become more aware of the importance of equipment in the performance of their duties. Much of their equipment was originally designed for other uses and must be modified before it can be used for police work. Other equipment items are used as given. No standards have existed against which equipment performance could be measured nor were any standard test methods or procedures available. It has been difficult for agencies to compare the performance of equipment items. Recognizing this problem, in 1970, the Law Enforcement Assistance Administration (LEAA) of the Department of Justice began a concentrated program toward the improvement of law enforcement equipment.

As the first step in its Equipment Systems Improvement Program (ESIP), LEAA, in cooperation with the Department of Commerce, established a Law Enforcement Standards Laboratory (LESL) at the National Bureau of Standards (NBS). The broad goal of LESL is to recommend performance standards which can be promulgated by LEAA as voluntary guidelines for the selection of equipment by law enforcement agencies. Additionally, LESL is developing standard test methods and procedures, so that the relative performance of similar items may be evaluated by departments themselves.

In order to provide equipment user information for the ESIP program, in 1971 the National Institute of Law Enforcement and Criminal Justice (NILECJ) of LEAA asked the Behavioral Sciences Group of the Technical Analysis Division at NBS to gather information from the users of law enforcement

xiv

1

equipment about their specialized equipment needs and problems. Although face-to-face interviews with a large sample of representatives from law enforcement agencies would have been desirable, time and manpower constraints led to the development of a nationwide, mail sample survey having two general objectives: (1) To assist NILECJ in the establishment of priorities for LESL's standards development activities; and (2) to obtain detailed information about certain broad equipment categories so that research to develop standards in these areas could begin.

This report fulfills <u>part</u> of the second general objective. The associated survey questionnaire (see Appendix A) will be referred to as the Body Armor and Confiscated Weapons Detailed Questionnaire (DQ). The remainder of the second objective is accomplished in the reports of the other five DQs: Alarms, Security and Surveillance Systems; Communications Equipment and Supplies; Handguns and Handgun Ammunition; Sirens and Emergency Warning Lights; and Patrolcars. The first general objective (above) is accomplished in the report on the Equipment Priorities Questionnaire (EPQ)*. A complete listing of these seven reports may be found on the inside front cover of this report.

1.2 Sample Design

Although the objective of ESIP is to serve all types of law enforcement agencies, this particular study was purposefully limited to police departments as the largest single group of law enforcement agencies with identifiable equipment needs. No attempt was made to survey correctional institutions,

courts, forensic laboratories, or special police agencies such as park police, harbor patrols or university police. The computerized directory of approximately 14,000 police agencies, compiled and maintained by LEAA's Statistics Division, provided the population from which the sample was drawn. Care was taken to exclude the double listings that existed for some agencies. (Details of the selection process are given in Appendix B of the Equipment Priorities Questionnaire.)

The final list of 12,842 departments was cross-stratified by LEAA geographic region and department type by the mutual agreement of NBS and NILECJ. The assignment of states to regions and the seven department types chosen for study are shown in Table 1.2-1.

Table 1.2-1. Stratification Categories

DEPARTMENT TYPES:	LEAA GEOGRAPTIC REGIONS:
State Police County Police & Sheriffs City with 1-9 Officers City with 10-49 Officers City with 50 or more Officers* The 50 Largest U.S. Cities** Township Departments	<pre>l = Conn., Maine, Mass., N.H., R.I., Vt. 2 = N.J., N.Y. 3 = Del., Md., Penn., Va., W. Va., D.C. 4 = Ala., Fla., Ga., Ky., Miss., N.C., S.C.,</pre>

^{*} Excluding the 50 largest U.S. Cities.

The breakdown of the <u>population</u> of police departments by cross-strata is exhibited in Table 1.2-2. As can be seen from the Table, there were no Townships in Regions 4, 6, 7, 8, 9 and 10. Almost 63% of the departments were city police, 43% having 1-9 full-time officers. County Departments

^{*} LEAA POLICE EQUIPMENT SURVEY OF 1972, Volume I: The Need for Standards -- Priorities for Police Equipment.

^{**} By population, U.S. 1970 census.

Table 1.2-2 Number of Police Departments by Region and Type

LEAA REGION

DEPARTMENT TYPE	1.	2	3	4	5	6	7	8	9	10	TOTAL
State	6	2	5	8	6	5	4	6	4	4	50*
County	66	84	257	764	536	506	413	288	103	120	3137

TOTAL	829	1088	1544	2186	2883	1498	1196	668	505	439	12,836

^{*} Questionnaires were actually sent to 56 State Police departments since there were 6 State Departments which listed two police agencies without reference to a common central agency. However, only one set of questionnaires was accepted from each of these 6 agencies as described in Volume I, Appendix B, page B-2.

comprised about 24% of the population. By Region, the smallest (Region 10) contained only 3.4% of the police departments, while Region 5, the largest, had 22.5%. The variation in the number of departments in a cell (Region/Department Type combination) was even greater than that across the strata, i.e., the number of departments in each cell ranged from 0 to 1470.

The considerations discussed in the previous paragraph led to the sampling plan discussed briefly below. All of the State Departments and the Fifty Largest City Departments were included in the sample and were asked to complete all six DQs, i.e., they were sent the entire package of seven questionnaires. For the remaining cells the variation in cell size presented a problem: If the same fraction of the entire population was to be selected from the members of each cell, a constant sampling fraction large enough to allow a sufficient number of sample units (police departments) in small cells would yield an unmanageably large total sample; on the other hand, a constant sampling fraction small enough to make the total sample manageable would yield too few sample units in small cells. To solve this problem, a fixed sample of 30 police departments/cell was chosen wherever possible, resulting in a different sampling fraction for each cell. A fixed sample size of thirty departments/cell was chosen to facilitate the equitable distribution of the six DQs. This plan resulted in sending the Body Armor DO to 529 departments.

The departments were selected randomly within each cell, from the total cell population, each department (other than the States and the Fifty Largest Cities) receiving two DQs. Thus, in cells having 30 sample units, the Body Armor DQ was mailed to 10 departments; cells having fewer sample units were

allocated proportionally fewer Body Armor DQs. Table 1.2-3 presents the total sample for the Body Armor DQ by Region and Department Type.

Once the sample was selected, each sample unit was assigned a unique seven-digit identification number, coding region, type, and questionnaire assignment.

1.3 Questionnaire Administration

From the beginning of the project, it was evident that stringent control would be required in administering the questionnaires to ensure a high rate of response. Computer-stored daily status records were input via a teletypewriter terminal for each sample department. In general the following procedure was used:

- (a) Each department in the sample was mailed a letter, signed by the director of NILECJ, addressed to the head of the department.

 This letter introduced the survey and requested cooperation.
- (b) About one week later, the questionnaire packages were mailed.
- (c) Departments not returning the questionnaires within a month were identified by the computer and were sent a self-return postcard requesting information as to the status of the questionnaires.

 Departments not receiving the questionnaire package were sent another; those not returning the postcard were placed on a list for telephone follow-up.
- (d) About a month and a half later, departments with which no contact had been made were called by telephone.
- (e) Returned questionnaires were reviewed for completeness and either coded for keypunching or filed for telephone call-back to supply missing data or to resolve ambiguities.

Table 1.2-3. Number of Departments Selected to Receive the Detailed Questionnaire:
Body Armor & Confiscated Weapons, by Region and Department Type.

DEPARTMENT TYPE: LEAA GEOGRAPHIC REGION: Q. TOTAL Total POPULATION State 50 ≥ County 1.0 IO 1.0 City 1-9 Officers City 10-49 Officers City 50+ Officers 50 Largest Cities Townships** ---__ ___ -Total 529* Ą PERCENT TOTAL POPULATION

^{*} Questionnaires were actually mailed to 56 State police departments since there were 6 states which listed two police agencies without references to a common central agency. However, only one set of questionnaires was accepted from each of these 6 states.

^{**} Township departments exist only in Regions 1, 2, 3, and 5.

Considerable effort was expended to ensure a high rate of response, and this effort was rewarded with an 83% response for the Body Armor DQ, and between 80% and 85% for each of the other questionnaires. In the course of the survey more than 70% of the sample departments were contacted at least once by telephone. More than 1300 phone calls were made by the survey team.

The distribution of respondents (departments which returned usable Body Armor DQs) is exhibited in Table 1.3-1. The highest percentages of response were from the larger Cities and States, (88 - 92%), while Counties and Townships had the poorest response rates (under 75%).

1.4 Development and Design of the Body Armor & Confiscated Weapons DQ

The survey plan and questionnaire design (of all seven questionnaires) evolved over a 12-month period. During this time, the survey team consulted at length with NILECJ equipment experts, LESL program managers, and equipment manufacturers. In addition, the officers and administrators of about 40 police departments served as consultants and/or as respondents for pretests of various versions of the questionnaires.

The Body Armor DQ, in its final form, is reproduced in Appendix A.

This DQ asked respondents to describe situations which would require the use of body armor, kinds of data maintained when officers were killed or wounded, and about other kinds of ballistic protective devices used in their departments A section asking about numbers of weapons confiscated and methods of disposing of those weapons was added to this questionnaire at the request of the U.S. Department of Treasury. The questionnaire was limited to general topics because: (1) It was not possible, considering the scope of the present survey, to explore in a detailed manner specific information about all types

Note: The conventions used in displaying and reporting on the results of the questionnaires are presented on page 16, section "g".

^{*} Questionnaires were actually mailed to 56 State police departments since there were 6 states which listed two police agencies without references to a common central agency. However, only one set of questionnaires was accepted from each of these 6 states.

^{**} Township departments exist only in Regions 1, 2, 3, and 5.

of body armor or other protective equipment in use, and (2) it was felt that the general data gathered in the present effort would provide important direction for research in the development of standards, the main objective of the survey.

1.5 Characteristics of Subsample Groups

The EPQ of the LEAA Police Equipment Survey* requested data from each department about population served, physical size of jurisdiction served, type of jurisdiction, number of full- and part-time officers, approximate total, equipment, and personnel budgets during 1971, and acope of the activities handled by the department.

Table 1.5-1 presents a partial tabulation, by department type, of the responses to a check list of 30 typical police activities by the respondents to the EPQ. (The EPQ respondents include, but are not limited to, the respondents to the Body Armor DQ. See Section 1.2.) The activities most frequently checked by all departments were: (1) Serve Traffic and Criminal Warrants (88%), (2) Traffic Safety and Traffic Control (87%), and (3) Communications for Own Department (87%). The activity with the most consistent level across all department types was that of Emergency Aid and Rescue, ranging from 60% (Cities with 50+ Officers) to 67% (Counties).

Higher percentages of State and Fifty Largest City departments than of other Department Types were handling certain of the 30 activities. For example, all of the Fifty Largest City departments responding and 98% of the responding State departments said that their departments provided Police

Training for Own Department. These compare to 68% for all responding departments. All of the responding Fifty Largest Cities said that they handled Criminal Investigation in their own departments. This compares to 86% of the total sample of departments. Although only 13% of the departments overall had Crime Laboratories, 73% of the Fifty Largest Cities and 55% of the States had them.

Counties appeared to be the only Department Type with significant responsibilities for custody and detention for more than 1 week. Seventy-eight percent of these departments had Custody/Detention--Up to 1 Year, as compared with 22% of the total sample.

Tables 1.5-2 and 1.5-3 present summaries of descriptive data by

Department Type and LEAA Region, respectively. As can be seen from the

column for Annual Equipment Budget (Table 1.5-2), there was a wide range

of expenditures among different Department Types: From a mean of about 10

thousand dollars for responding Cities (1-9) to almost 2.5 million dollars

for the Fifty Largest Cities. Overall, equipment budgets represented some
what over 10% of the Annual Total Budget.

The mean Number of Part-Time Officers was based on those respondents having part-time officers in their departments. Of the 45 responding from the Fifty Largest Cities, only six had part-time officers, including one city which had nearly 6000. Thus, the mean value of 1115 for this department type is somewhat misleading. It should be noted that the category Part-Time Officers included officers described as auxiliary, volunteer, reserve, school-crossing guard, dispatcher, summer, special agent, traffic supervisor, posse, and cadet. All of these classifications were counted in the Part-Time Officer category since it has different meanings for different departments.

Table 1.5-2. Descriptive Data by Department Type (Means)

Department Type	Area (Sq. Miles)	Population	Number of Full-Time Officers	Number of Part-Time Officers	Annual Total Budget	Annual Equipment Budget	Annual Personnel Budget

the state of the same of the same of	7	2379	11 2094	84	9	\$ 1,220,385	\$ 121,001	\$ 983,696
	8	6346	83023	54	9	\$ 728,549	\$ 77,081	\$ 568,463
Company of the Company of the American	9	4218	372094	281	46	\$ 5,743,553	\$ 728,801	\$4,528,692
1	0	3580	104877	69	9	\$ 1,253,894	\$ 82,198	\$1,011,604

Variations in these descriptive averages by LEAA region (Table 1.5-3) were considerably smaller than variations by department type. Regions 1 and 8 had smaller budgets than the others, primarily because each had only one of the Fifty Largest Cities.

2.0 QUESTION BY QUESTION DISCUSSION

2.1 Advice to the Reader

In reading Section 2, certain points should be kept in mind:

- (a) THIS REPORT IS NOT AN EVALUATION OF ANY OF THE EQUIPMENT

 DESCRIBED OR DISCUSSED WITHIN IT. IT IS A PRESENTATION OF

 INFORMATION AND OPINIONS OF A STRATIFIED RANDOM SAMPLE OF

 POLICE DEPARTMENTS GIVEN IN RESPONSE TO A SPECIFIC SET OF

 QUESTIONS. IT DOES NOT, IN ANY WAY, REFLECT OBJECTIVE TESTING

 OF ANY EQUIPMENT BY THE NATIONAL BUREAU OF STANDARDS.
- (b) The report reflects only what police departments were willing and able to say in response to a specific set of questions.

 In most cases, no attempt was made to verify the accuracy of the information given or the level of sophistication of the respondent.
- (c) Each discussion begins with the presentation of the question that appeared in the questionnaire, and in most cases the choices supplied, if any, that were set off in a box. However, the reader is cautioned to become familiar eith the questionnaire sent to departments in the sample (See Appendix A) and to evaluate the data in terms of the exact questions asked.

- (d) The text tables that appear in Section 2 are almost <u>never</u> the complete tables that were tabulated for that question. Data categories for the text tables may have been collapsed from the full table, or certain categories of interest may have been singled out for fuller discussion. Appendix B contains the complete tables from which the text tables were extracted.

 Text tables have been numbered after the question number (e.g., the text tables for Question 6A. would be numbered 6A-1, 6A-2, etc.). The tables in Appendix B are also numbered after the question number, in the same manner. In some cases, tables that appear in Appendix B will not have been discussed at all in the text.
- (e) Data in the text of this report are usually presented by nearest whole percent of the group under consideration. In Appendix B, the data are usually presented by number of respondents and percent. Because of statistical limitations imposed by the sample sizes used in this study, the reader is cautioned to be wary of assigning importance to percentage differences of less than 5% when percentages are based on the total respondents, or to percentage differences of less than 10% when percentages are based on one of the subsample groups, (e.g., a particular Department Type or Region). No statistical tests of significance are reported.
- (f) Data were always tabulated by each of the choices supplied, if any, in the questionnaire. Any "other" choices written in by the respondents were also tabulated and/or recorded verbatim. In most cases, the numbers of respondents giving a specific "other"

response do not reflect the numbers of respondents who would have marked that choice if it had been one of those provided.

Therefore, in most cases, this report lists or gives examples of "other" responses, but does not present numbers or percents of departments giving that response. For those questions for which choices were not provided in the questionnaire, coding categories were developed after approximately one-fourth of the questionnaires had been returned.

ized when they are discussed in the text. In addition, the four Department Types which are composed of city departments are at times discussed as a group. In those cases, the word "city" is also capitalized. The following convention has been adopted in the report to designate the four City Department Types:

City with 1-9 Officers = City (1-9)

City with 10-49 Officers = City (10-49)

City with 50 or More Officers = City (50+)

The Fifty Largest Cities = Fifty Largest

In table headings this same convintion has been used except that the parentheses have been removed, and the Fifty Largest Cities are designated "50 Largest".

(h) When the subsample groups are discussed (e.g., "Counties said..." or "Cities (1-9) said...") the reference is to the responding departments from one of the sample strata. It is particularly important to note that when the text or tables refer to "All Departments" or "All Responding Departments", the reference

is to all <u>responding</u> departments from the sample described in Section 1.2. This sample was <u>not</u> proportional to the total population of police departments, and although it is possible to do so, the data in this report have not been weighted to allow direct extrapolation to the total population.

(i) In an attempt to make this report more readable, the main topics of the questionnaire have been reordered in the report; the discussion of the findings does <u>not</u> follow the order of the questions. To find the discussion of a particular question quickly, consult the List of Tables in the Table of Contents.

2.2 Discussion

2.2.1 Characteristics of Respondents

TITLE OF RESPONDENTS

All of the questionnaires in the LEAA Police Equipment Survey were mailed to the Chief (or highest official) of the department with a request that the questionnaires be directed to the person or persons within the department who were felt to be best qualified to answer the questions.

In general, the Body Armor Questionnaire was filled in by officers with high rank. In 68% of the City (1-9) departments the questionnaire was completed by the Chief; in Township departments, 64% were filled in by the Chief; and in City (10-49) departments, 52% of the Body Armor Questionnaires were filled in by the Chief. As the size of the City department increased, the percentage of Chiefs completing this questionnaire decreased. In the larger Cities, greater percentages of respondents were Sergeants, Captains, and Lieutenants.

Table i. Rank of Primary Respondent for Body Armor Questionnaire, by Department Type.*

TITLE/RANK:

DEPARTMENT TYPE:

	8	%	%	%	
	CITY	CITY	CITY	50	8
	1-9	10-49	50+	LARGEST	TOWNSHIP
Chief	68	52	22	7	64
Captain	4	13	16	15	4
Lieutenant	1	12	20	17	7
Sergeant	9	9	11	24	14
"Non Rank" Title	6	1	10	17	7

^{*} Excluding County and State Departments.

In County and State departments too, relatively high ranking officers filled in the Body Armor Questionnaire: In 46% of the State departments the questionnaire was completed by either a Captain or a Lieutenant; in 57% of the County departments the form was answered by the Sheriff or Under Sheriff.

In sixteen percent of the State and 17% of the Fifty Largest City departments the questionnaire was completed by a person with some title that was not a police rank. Usually these respondents were administrative personnel.

NUMBER OF YEARS OF LAW ENFORCEMENT EXPERIENCE OF RESPONDENTS

In general, the respondents to the Body Armor Questionnaire had been in law enforcement work for several years when they answered the questionnaire. Forty-eight percent of the 440 respondents said they had more than 15 years of experience in law enforcement. Eighty-four percent of them had 6 or more of experience. Only 3% of all respondents had less than 2 years of such experience.

More than eighty percent of the respondents from States and the three largest City Department Types had more than 10 years of experience in law enforcement.

Table ii. Years of Experience in Law Enforcement of Primary Respondent.

NUMBER OF YEARS OF LAW ENFORCEMENT EXPERIENCE:

	Than 2			46	19	22	33	42	41	4
	Than 2			30	12	8	15	22	15	4

2.2.2 Use of Body Armor and Other Ballistic Protection Equipment

7. In your department's opinion, if body armor is worn in a potentially explosive situation (a potential riot, for example, or in controlling an "unfriendly" crowd), would it be better for the body armor to be visible or to be hidden under the uniform?

Should be visible Should be hidden Should not be worn at all

7B. Why is that?

More than half (56%) of the responding departments said that when body armor is worn in a potentially explosive situation it Should Be Hidden.

About one-third felt it Should Be Visible. Very few departments (3%) felt it Should Not Be Worn At All.

The seven Department Types tended to be similar in their assessment of this use of body armor: Within every Department Type half or more of the responding departments said body armor Should Be Hidden in this sort of situation. Departments in the Fifty Largest Cities were least clear cut in their opinions -- 50% of these largest city departments said Should Be Hidden and 41% said Should Be Visible.

Table 7-1. Percentages of Departments in Each Department Type Preferring Visible, Hidden, or No Body Armor in a Potentially Explosive Situation.

DEPARTMENT TYPE:	% Should Be Hidden	% Should Be Visible	% Should Not Be Worn	% Don't Know/No Answer
Township	64	32	0	4
State	59	32	2	7
City (10-49)	58	34	2	. 5
County	57	28	5	10
City (1-9)	54	35	1	10
City (50+)	53	37	2	7
Fifty Largest	50	41	7	2
All Respondents	56	34	3	7

Departments were asked to give a reason for their answers to Question
7. Using these narrative responses, coding categories were developed and the responses were tabulated in these categories.

The two most common reasons given by the 246 responding departments which said body armor should be hidden were Snipers Are Less Likely to Aim for Vulnerable Areas (31%) and the Sight of Body Armor Tends to Incite Crowds (28%). About one-fourth of the departments that favored hidden body armor gave no reason for that answer. Several of the departments which preferred hidden armor wrote comments about the effects of body armor on public opinion.

Body armor, they said, presents the officer as the agressor rather than as a "peace officer". In addition, some commented that visible body armor conceals the uniform, and thus the identity, of the officer.

Table 7-2. Of the 246 Departments Preferring Hidden Body Armor in Potentially Explosive Situations, Percentages* Giving Specified Reason.

REASON:	% Respondents* Saying "Hidden" (n = 246)
Snipers are less likely to aim for vulnerable areas	31
Sight of armor tends to incite crowds	28
Don't want others to know it's worn; element of	
surprise	9
Visibility of uniform is more important than visi-	
bility of armor; identify officer by uniform	2
So that unprotected officers will not become targets	2
Miscellaneous others	9
No answer	26

^{*} Percentages add to slightly more than 100% since multiple answers were allowed.

The 150 responding departments which said body armor should be visible in a potentially explosive situation generally referred to the positive effects of visible body armor on the crowd: Shows That Officers Are Prepared (25%), has a Deterrent Effect on Crowd (21%), has a Psychological Effect (13%), and Show of Force (9%). A smaller percentage of the departments favoring visible body armor gave reasons which expressed a belief that visible body armor would be more practical or comfortable: Easier to Put On and Take Off (9%), and More Comfortable/Maneuverable (5%).

Table 7-3. Of the 150 Departments Preferring Visible Body Armor in Potentially Explosive Situations, Percentages* Giving Specified Reason.

REASON:	<pre>% Respondents Saying "Visible"*</pre>
Well equipped officer should show training, protection, and preparedness for crowd	25

8. If body armor designed for the following activities were available to you, for which of those listed below do you think such body armor would be used routinely in your department? (MARK X BY EACH ITEM THAT APPLIES) . Foot Patrol (concealed armor) . Burglary calls . Automobile Patrol (concealed armor) . Robbery calls . Detectives (concealed armor) . Family Disturbance calls . Foot and/or Auto Patrol in High . Approaching a Suspicious Crime Areas (concealed armor) Vehicle . Sniper situations . Other (specify) . "Man with a Gun" calls

This question was designed to allow departments to speculate about the activities for which body armor would most likely be used <u>if</u> appropriate body armor for that activity were available. The body armors available to police departments at the time of this survey were clearly too heavy, too difficult to put on and take off, and in some cases, required too much care in handling to allow them to be used in situations other than those in which there was known danger of exposure to gunfire, such as sniper situations. There have, however, been recent technological developments leading to

relatively lightweight, flexible, and comfortable body armor or bullet protective clothing which might be usable in some of the situations described in Question 8.

The two activities for which most responding departments said they would routinely use an appropriate body armor were Sniper Situations (80%) and "Man With a Gun" Calls (70%). More than one-third of the responding departments also said they would use body armor routinely for Robbery Calls (36%), if an appropriate armor were available. Four other activities were each cited for routine body armor use by about one-sifth of the departments: Burglary Calls (22%), Patrol in High Crime Areas/Concealed Armor (18%), Family Disturbance Calls (17%), and Approaching a Suspicious Vehicle (17%).

There were some Department Type differences: Fewer States cited Robbery, Burglary, Family Disturbance, and Foot Patrol; these were more often mentioned by the other Department Types. A smaller proportion of the Fifty Largest Cities cited "Man With a Gun" Calls than did Counties, Townships, and the other City Department Types. The Fifty Largest Cities also more often listed some "Other" activity.

"Other" activities mentioned were such things as riots and/or civil disturbances, apprehension of dangerous persons or barricaded criminals, and guarding VIPs.

Table 8. Percentages* of Departments in Each Department Type Which Would Routinely Use Body Armor for Specified Activity.

	Special Armored Cars		Delication and Problem (part of the Control of the
	phecrar wrunted care		
1			

Taken as a group, only small percentages of the 440 responding departments were using or were planning to use any of the listed ballistic protective items. (In this case, no answer was assumed to mean the department neither used nor planned to use the item.) Departments were more likely to be using or planning to use Ballistic Shields or Ballistic Helmets than Armored Cars or Patrolcar Armor.

Table 9-1. Percentages* of Responding Departments Using and Planning to Use Specified Ballistic Protective Item.

BALLISTIC PROTECTIVE ITEM:	% Now	% Plan	% No Answer/
	Using	To Use	None
Ballistic Helmet	12	6	82 °
Hand-held Ballistic Shield	10	7	83
Special Armored Cars	4	2	94
Patrolcar Armor	2	1	97

Among the seven Department Types, however, some Department Types had relatively high percentages of departments using ballistic protective devices. Fewer than 20% of Counties, Townships, Cities (1-9), and Cities (10-49) were using or were planning to use each of the ballistic items listed. But, about one-third of the Fifty Largest City and City (50+) departments were or would be using Hand-held Ballistic Shields. About one-fourth of the States were using or were planning to use Ballistic Helmets, and almost one-third of the Fifty Largest Cities were using or planning to use Armored Cars.

^{10.} Do you have any comments about the use of, or problems with the use of body armor or ballistic protective items?

No choices were supplied for this question, and as is often the case with "open-ended" questions, many departments (46%) gave no answer. For an additional 12%, the only comment supplied was that they had "No Problems" with ballistic protective equipment or body armor. The remaining 42% wrote a comment other than "No Problems" or described a problem with such equipment. The two largest City Department Types (Fifty Largest and 50+ Officers) were more likely to mention a problem than the other Department Types.

Table 10-1. Percentages of Departments in Each Department Type Providing a Comment About Ballistic Protective Items or Body Armor.

All Respondents	42	12	46	

The Body Armor Questionnaire did not ask whether the department was currently using body armor, and many departments used Question 10 to volunteer that they were not using body armor. Table 10-2. (below) is presented only to show the flavor of those responses, the data in this table cannot be used to estimate numbers of departments using body armor. It does show approximately the same trend as Table 10-1 and Table 9-3; that the larger departments are more likely to have ballistic protective devices.

Table 10-2. Percentages of Departments in Each Department Type Which Commented (Q. 10) That Their Departments Had No Body Armor.*

City (10-49)	16
State	7
City (50+)	. 7
50 Largest	0
All Respondents [n = 440]	13

^{*} Data based on narrative response; see discussion immediately preceding Table 10-2.

Of the 183 responding departments which made a comment (other than "No Problem") or described a problem, the most common problem mentioned was that body armor was too heavy and bulky making it Impractical for Routine Use (12%), Restricting Maneuverability (10%), Uncomfortable (5%), or Causing Fatigue (5%). About 8% of those making comments specifically suggested redesign to make body armor lighter or more flexible. These comments on the weight and bulk of body armor included discussions of the difficulties of putting on and taking off the armor, the amount of time required to "suit up", the problems of getting in and out of vehicles while wearing armor, and the general problems of fatigue and build up of body heat while wearing armor.

A few of the responding departments which made comments referred to the cost of body armor. The most common comment was that body armor was too expensive for the department to provide it for all officers.

About one in ten of the responding departments which made comments said that body armor provided Inadequate Protection and/or provided a False Sense of Security. About one-fourth of the State and Fifty Largest City departments which made comments mentioned this problem. The comments centered on the belief that body armor did not protect against the fire power it was subjected to and on requests that body armor be subjected to test procedures using rifles and various calibers of handguns. Further, these departments said that officers seemed to believe that body armor protects better than it actually has been shown to do and, therefore, took risks which sometimes resulted in deaths or injuries.

2.2.3 Availability of Data for Researchers Developing Body Armor Standards.

The departments were asked a series of questions to find out the kinds of data which might be available to researchers developing standards for body armor. The first question in the series was used to identify the departments which kept detailed death and injury statistics. Questions 2 through 6 were then to be answered only by the departments which kept detailed records.

When one of your officers is injured or killed (by knife or gun), does your department keep records which are detailed enough to determine the exact (within an inch or two) location of the body at which the wound occurred?

Yes No Sometimes

There were large differences among the seven Department Types in their answers to this question. These differences, however, appeared to be more related to the incidence of officer injury by knife or gun than to departmental record-keeping policies. About one-third or more of the responding departments in the four smallest Department Types volunteered that they had never had an officer killed. None of the Fifty Largest City Departments made that statement.

A large majority (87%) of the Fifty Largest City departments said they kept detailed records concerning officers' wounds as did more than half of the responding departments in States, Cities (50+), and Cities (10-49).

Table 1. Percentages of Departments in Each Department Type Maintaining Records of the Exact Locations of Wounds Sustained by Officers. (Ordered by Size of Department Based on Average Number of Officers.*)

DEPARTMENT TYPE:

KEEP EXACT RECORDS?:

50 Largest	% Yes	% No	% Sometimes	% No Officer Killed
State City (50+) County City (10-49) Township City (1-9)	87 61 60 47 53 29 37	7 18 12 15 11 25	7 9 7 3 2	0 11 20 35 31 46
All Respondents	53	15	4	40

^{*} For Department Type statistics, see Table 1.5-2, page 13.

2. How about to determine	the weapons us ne:	ed? Are	your rec	ords de	cailed enough
Caliber an	nd type of gun?	i	Yes	No	Sometimes
Type of bu	llet used?		Yes	No	Sometimes
Distance i	rom which shot	was fire	ed? Yes	No	Sometimes

Most of the 235 departments which said they maintained records concerning officers' wounds ("Yes" to Question 1) said these records included information about the Caliber and Type of Gun which was used (92%) and the Type of Bullet Used (86%). A slightly smaller percentage (70%) said their records identified the Distance from Which Shot was Fired.

Department Type differences were not as great with respect to the kind of records kept as they were with respect to whether records were kept or not. Of the responding departments in each Department Type keeping detailed records, three-fourths or more in each Department Type* said the records identified Caliber and Type of Gun and the Type of Bullet Used. Slightly higher percentages of the larger departments recorded these two items than did Counties and Cities (1-9).

Fewer of the departments which kept injury data said that they were always able to determine Distance from Which Shot was Fired, (70%), as compared to Caliber of Gun (92%) and Type of Bullet Used (86%) information. However, relatively higher percentages of departments stated that they sometimes were able to determine this information (23%) than in the other two categories (67% and 9%, respectively).

^{*}Excluding Townships for which no statement can be made. Fewer than 10 of the Township departments said they kept records of officers' wounds.

Table 2. Of the Departments in Each Department Type Maintaining Detailed Injury Data ("Yes" to Q. 1), the Percentages Including Specified Data in Those Records.

DEPARTMENT TYPE:	CALIBER & TYPE OF GUN:			TYPE OF BULLET USED:		DISTANCE SHOT FIRED FROM:		
	% Yes	% Sometimes	% Yes	% Sometimes	% Yes	% Sometimes

™Township [n=8]	*	*	*	*	*	*		
All Respondents [n=235]	92	6	86	9	70	23		

^{*} Excluding Township departments. Fewer than 8 of the responding Townships maintained such records.

Only 7% of the 235 responding departments which maintained records on officers' wounds said that they would <u>not</u> be willing to make these records available to researchers. A higher percentage, however, said that they Didn't Know whether the records could be made available or not. These Don't Know responses probably represented two distinct factors: Some of the respondents said that permission would have to be obtained from a particular official, that the respondent himself could not give permission; and some respondents indicated that the records could only be made available under certain conditions.

Respondents from State and Fifty Largest City departments were more likely to say Don't Know. This tendency was probably the result of the fact that fewer Chiefs or department heads filled in the Body Armor Questionnaire in these Department Types.

Table 3. Of the Departments in Each Department Type Maintaining Detailed Injury Data ("Yes" to Q. 1), the Percentages Willing to Make These Records Available to Researchers.

DEPARTMENT TYPE:

WILLING TO MAKE AVAILABLE?:

	% Yes	% Don't Know	% No	% No Answer
City (10-49) a	85	11	4	0
County	80	6	11	3
	76	16	6	2
City (50+)	72	24	3	0
City (1-9)	60	32	7	0
50 Largest State	48	41	11	0 *
*Township	*			
All Respondents [n=235]	72	20	7	1

^{*} Excluding Townships. Fewer than 8 of the responding Townships maintained such records.

4.	Are any <u>SUMMARIES</u> of these statistics on death and injury to your officers kept by your department?)
	Yes No (IF "NO" TO QUESTION 4, GO TO QUESTION 7) Sometimes	

More than 80% of the Fifty Largest Cities which maintained statistics on officers' injuries and deaths said that they kept summaries of those records. Between about half and three-fifths of the departments in the other Department Types kept such summaries.

^{3.} Would your department be willing to allow a researcher to visit and study these records for research purposes?

Yes

No

Don't Know

A total of 147 departments, 33% of the 440 responding departments, said that they kept summary statistics on death or injury to their officers ("Yes" to Question 1 and "Yes" or "Sometimes" to Question 4).

Table 4. Of the Departments in Each Department Type Maintaining Detailed Injury Data ("Yes" to Q. 1), Percentages Keeping Summaries of Those Records.

DEPARTMENT TYPE:	M	MAINTAIN SUMMAR	IES?:
	% Yes	% No	% Sometimes
50 Largest	82	15	2
State	63	37	. 0
County	60	34	6
City (50+)	55	39	2
City (10-49)	53	47	0
City (1-9)	48	48	3
*Townships	*	*	*
All Respondents [n=325]	60	37	2

^{*} Excluding Townships. Fewer than 8 of the responding Townships maintained such records.

5. (IF "YES" OR "SOMETIMES" TO QUESTION 4) Do these SUMMARIES contain information ab	out:		
Exact (within an inch) location?	Yes	No	Sometimes
Caliber and type of gun?	Yes	No	Sometimes
Type of bullet used?	Yes	No	Sometimes
Distance from which shot was fired?	Yes	No	Sometimes

Most of the 147 responding departments which maintained summary statistics on death and injury to officers said those summaries contained information about Caliber & Type of Gun (90%), Type of Bullet Used (82%), and the Exact Location of the Wound (78%). About two-thirds of those respondents also said their summaries listed the Distance From Which Shot Was Fired. It appears that virtually all of the departments that compile such summaries list those

four pieces of information when they are available -- the addition of "Yes" and "Sometimes" answers equals 100% in most cases except for the Distance From Which Shot Was Fired Category.

Table 5. Of the Departments in Each Department Type Maintaining Summarized Wound Data ("Yes" to Q. l and "Yes" or "Sometimes" to Q. 4), Percentages Including Specified Data in Those Records.

PROVIDE DATA?:	% Respondents With Summarized Data
	(n = 147)
Yes	61
Don't Know	28
No	11
No Answer	1

2.2.4 Confiscated Weapons

Section II: Confiscated Weapons was added to the Body Armor Questionnaire at the request of the U.S. Treasury Department. The Treasury Department was interested in the kinds and numbers of weapons confiscated by
police departments; how police disposed of confiscated weapons; and problems
encountered, if any, in disposing of confiscated weapons. Although answers
to questions such as these are of correlary interest to current equipment
research, they were not considered of primary importance to the NILECJ
standards development program. Therefore, although questions concerning
confiscated weapons were developed and included in this questionnaire, these
questions were developed too late to allow the same pretests that were carried
out for other questions in the survey. In addition, it was agreed by NILECJ
and NBS that NBS would analyze data from this section "as returned", i.e.,
if Question 11A-C and 12A-C contained ambiguous data, or lacked data, telephone calls would not be made to complete the data as was the usual practice
for other parts of the survey.

The Confiscated Weapons Section asked a series of three questions about weapons confiscated in two separate years, 1970 and 1971:

- (1) 11A/12A. About how many (a) handguns, and (b) shoulder weapons did your department confiscate in 1971/1970?
- (2) 11B/12B. Of the total number of (a) handguns, and (b) shoulder weapons you confiscated in 1971/1970, about how many had originally been MILITARY ISSUE?
- (3) 11C/12C. About how many of all HANDGUNS confiscated in 1971/1970 were disposed of in each of the following ways? (followed by cloices.)

There are several points the reader should keep in mind when reading and interpreting the responses to Questions 11A-C and 12A-C: (1) Although the questions were designed so that it would be possible to directly relate the answers from one question to those of another question it was not always possible to do so. For example, although it was expected that numbers of handguns confiscated (Qs. 11A and 12A) wWould approximate the numbers of handguns disposed of (Qs. 11C and 12C), this was not always the case.

Some departments provided numbers in answer to one of the questions, but either checkmarked or left other questions blank. Other departments indicated numbers of handguns confiscated in a given year, and then described all handguns disposed of in that year - a number that included the handguns confiscated over a period of several years. (2) In addition, a large proportion of the responding departments did not answer one or more of the questions. Therefore, estimates of total numbers of weapons confiscated in 1970 or 1971 based on these data might be subject to considerable error.

11A/12A. About how many (a) handguns, and (b) shoulder weapons did your department confiscate in 1971/1970?

WEAPON TYPE

NUMBER CONFISCATED IN 1971/1970

a. Handguns

b. Shoulder Weapons

Although a majority of the 440 responding departments supplied numbers (including zero) of weapons confiscated in 1971 and 1970, there was one major Department Type difference: Only about one-third of the State departments provided data for 1971 and even fewer (25%) reported numbers confiscated in 1970. More than 69% of the departments in every other Department Type reported numbers of handguns and shoulder weapons confiscated in 1971, and more than 50% of those Department Types supplied 1970 data. Non-responding State departments often said "Don't Know", Data Not Available, No Records Kept, or Don't Confiscate Weapons.

In every Department Type, higher percentages of departments supplied data for 1971 (Q. 11) than for 1970 (Q. 12). There are two possible explanations for this finding: The 1971 data may have been more readily available since it was the more recent, or some departments (particularly those which said zero) which answered Question 11 (1971 data) may have felt it unnecessary to repeat their answers for Question 12.

Table 11A/12A-1. Percentages of Responding Departments in Each Department Type Which Supplied Numbers (Including Zero) of Handguns and Shoulder Weapons Confiscated in 1971 (Q. 11A) and 1970 (Q. 12A)

DEPARTMENT TYPE:	SUPPLYING % for HANDGUNS	1971 NUMBERS: % for SHOULDER	SUPPLYING % for HANDGUNS 83	1970 NUMBERS % for SHOULDER 76
City $(1-9)$ [n = 78]	97	85	83	
	94	83	85	76
City $(10-49)[n = 89]$	89	79	68	68
Township [n = 28]		69	66	54
County $[n = 74]$	85		72	70
City $(50+)$ [n = 81]	79	79		72
50 Largest [n = 46]	72	72	72	25
States $[n = 44]$	34	34	25	23

About three-fourths of the confiscated weapons reported by respondents were handguns in both 1971 and 1970. However, this proportion was heavily influenced by the numbers of weapons reported by Fifty Largest City departments: More than 80% of the confiscated weapons reported by the responding departments were reported by departments in the Fifty Largest Cities.

Responding County departments, in contrast, reported that in 1970, 54% of their confiscated weapons were handguns and 46% were shoulder weapons.

Table 11A/12A-2. Of the Total Numbers of Confiscated Weapons Reported by the Responding Departments in Each Department Type* in 1971 and 1970, Percentages That Were Handguns and Shoulder Weapons.

Township	61	39	50	50		
County	58	42	54	46		
		į.	1			

^{*}Table based on those departments reporting numbers.

Based on those departments which supplied data, it appears that number of weapons confiscated per department was directly related to the size of the Department Type. The responding Fifty Largest Cities reported 2-3 times as many confiscated handguns per department as State departments. Responding States reported 9-12 times as many confiscated handguns per department as City (50+) departments.

Table 11A/12A-3. Numbers of Handguns and Shoulder Weapons Reported by the Departments Which Supplied Numbers (Including Zero) of Weapons Confiscated in 1971 (Q. 11A) and 1970 (Q. 12A).

 ······································		

Slightly smaller percentages of the responding departments supplied information about confiscated weapons of military issue than reported numbers of weapons confiscated. (A department was counted as having answered if it gave a number or stated "zero". Blanks could not be considered "zero" as: 5 wers.) This higher non-response rate might be attributed to the fact that some departments did not include "military origin" in their records on confiscated weapons.

40

Percentages of Departments in Each Department Type Which Reported Numbers (Including Zero) Of Weapons Table 11B/12B-1. of Military Issue Confiscated in 1971 (Q. 11B) and 1970 (Q. 12B)

TUDE .	SUPPLYING 1971 NUMBERS:		SUPPLYING 3	1970 NUMBERS:
DEPARTMENT TYPE:	% Depts. Reporting Military Issue Handguns	% Depts. Reporting Military Issue Shoulder	% Depts. Reporting Military Issue Handguns	% Depts. Reporting Military Issue Shoulder
City (10-49) City (1-9) City (50+) County Township 50 Largest State	84 79 65 64 57 39 23	78 74 65 53 54 37 25	73 64 59 50 50 37 14	70 63 60 46 54 33 14

As stated in the introduction to Section 2.2.4 it is difficult to compare data obtained from more than one question in this section of the questionnaire, since different sets of responding departments answered each question. Therefore, to compare total numbers of confiscated handguns and shoulder weapons with numbers of handguns and shoulder weapons originally of military issue, average numbers per department within each Department Type must be used to account for differences in numbers of respondents.

Based on these figures, it appears that only small proportions of the weapons confiscated by the responding departments in 1970 and 1971 had originally been of military issue. There did not appear to be any striking differences between the proportions of handguns and shoulder weapons that had been of military origin.

Table 11B/12B-2. Using Mean Number of Weapons Confiscated Per Department in Each Department Type and Mean Number of Weapons of Military Issue Per Department in Each Department Type, Percentages of Handguns and Shoulder Weapons That Were Originally of Military Issue.

11C/12C.	About how many of all HAN were disposed of in each	DGUNS confiscated in 1971/1970 of the following ways?
	NUMBER DISPOSAL OF	HANDGUNS IN 1971
	Turned over to a Melted in a Furn Dumped in Deep W Crushed	
	Collection	seum or Other Authorized Sample
	Issued to Sworn Range	Officers for Use on Duty or Target
	Returned to Owne Resold (Specify Other (Specify)	r or Agent of Owner to Whom)

There were again large differences among the seven Department Types in the percentages of responding departments indicating methods used to dispose of confiscated handguns. High percentages of the responding departments in the three largest City Departments did show disposal methods for both 1971 and 1970: 87% and 83% of the Fifty Largest Cities, 88% and 76% of Cities (50+), and 80% and 74% of the Cities (10-49). Only about one-third of the responding Townships provided 1971 disposal information, and 36-39%

of Townships, Cities (1-9), States, and Counties provided 1970 disposal information. Note that a higher percentage of the responding State departments provided 1971 disposal information (55%) than provided information about total numbers of handguns confiscated in 1971 (34%), the only Department Type to do so.

Table 11C/12C-1. Percentages of Departments in Each Department Type Providing Data About Methods Used to Dispose of Confiscated Handguns in 1971 and 1970.

DEPARTMENT TYPE:	REPORTING NUMBER	RS OR CHECKING			
	DISPOSAL METHOD:

	1971	1970			
City (50+)	88	76			
50 Largest	87	83			
City (10-49)	80	74			
County	70	39			
City (1-9)	60	38			
State	55	39			
Township	36	36			

Responses to Questions 11C and 12C were tabulated in two ways: A frequency count of departments which ever used the specified method to dispose of confiscated handguns in the given year (Indicated by a number of weapons disposed of in a specified way or by a check-off of a disposal method), and a tabulation of the actual numbers of handguns disposed of in a given way (Based on those departments supplying numbers).

In terms of percentages of responding <u>departments</u> using a specified method of disposal, the methods used by the highest percentages of departments were those which did not entail destruction of the handgun: Return to Owner or Agent of Owner, Turn Over to Other Agency, Issue to Officer for Use, Arms Museum/Sample Collection, Resold, and "Other". ("Other" responses to this question referred almost exclusively to handguns being

held in the department pending trial or other disposition.) As will be discussed further below, however, the <u>numbers of handguns</u> disposed of in these ways (with the exception of Return to Owner) were relatively small. Table 11C-2, below, presents the frequency count of departments for 1971 only. See Appendix B for 1970 figures.

Table 11C-2. Of the Departments Indicating Disposal Method(s), Percentage*
In Each Department Type** Using Specified Disposal Method in 1971.

Resold	.4	3	7	17	6	8

^{**} Percentages add to more than 100% since multiple answers were allowed.

** Excluding Townships in which only 10 respondents answered.

Departments which reported that they at least sometimes turned confiscated handguns over to another agency were usually referring to courts; sheriff departments; or the Alcohol, Tobacco, and Firearms (ATF) Bureau of the Treasury Department.

The responding departments which gave actual numbers of handguns disposed of in each category reported a total of 66,307 handguns disposed of in 1971 and a total of 38,763 handguns disposed of in 1970. The vast majority

(over 80%) of both these totals were reported by departments in the Fifty Largest Cities. (The reader is again cautioned that these numbers should not be used to estimate total numbers of handguns disposed of in these years because of high non-response rates. Tables 11C-3 and 12C-3 are presented in order to show trends in the relative use of disposal methods by different Department Types.)

Using the reported numbers, it appears that the responding States and Fifty Largest Cities tended actually to destroy a greater proportion of their confiscated handguns than the other Department Types. The methods most commonly used by States and Fifty Largest Cities were Melting in a Furnace and Dumping in Deep Water. The smaller Department Types showed much higher proportions of their confiscated handguns as Returned to Owner.

Relatively small percentages of confiscated handguns were said to be Resold. In some cases, this choice was accompanied by a comment indicating that confiscated handguns were used as partial payment for the department's service revolvers.

Only 14% of the responding departments had a comment in response to Question 13. These comments were very rarely problem statements, most of them described the department's disposal procedure. The only problems mentioned had to do with legal questions concerning disposal of weapons; obtaining court orders, etc.

Twenty-one percent of the responding departments made a comment for Question 14. These comments usually also described departmental policies, procedures, or record keeping, or discussed legal questions concerning disposal of weapons.

^{**} Less than 1%

^{**} Less than 1%.

^{13.} What problems, if any, have you had in disposing of confiscated weapons?

^{14.} Other comments:

Some examples are shown below:

"Our records do not reflect the information required in this section."

"None--Sold on a bid basis to the highest bidder to be shipped out of the" U.S.

"F.S.A. 790/08 Guidelines are well defined."

"No major problems in the past; however, we now have a new state law which... requires us to turn all confiscated weapons over to the Sheriff."

"System of using those weapons which are serviceable saves the taxpayer and allows us to have guns on hand to issue in event a gun is brought in for repair."

"Tighter control regarding the accessibility of cheap domestic & foreign handguns."

"A stricter court policy regarding cases involving handguns and a less liberal return of weapons once confiscated."

APPENDIX A

QUESTIONNAIRE

NBS-888 May 1972 OMB 41-F72030 Approval Expires June 30, 1973

U.S. Department of Commerce National Bureau of Standards

DETAILED QUESTIONNAIRE: BODY ARMOR

POLICE EQUIPMENT SURVEY

Sponsored By:

National Institute of Law Enforcement and Criminal Justice Law Enforcement Assistance Administration U. S. Department of Justice

' Directed and Conducted By:

Behavioral Sciences Group National Bureau of Standards Washington, D. C. 20234 Phone: 301-921-3558 INTRODUCTION: Many police departments have said that the body armor they are now able to buy is not suited to police work. They have described it as awkward, too heavy, and not protective enough for their work. In order to write voluntary performance standards for body armor, the Law Enforcement Standards Laboratory is trying to find out what police departments need.

PURPOSE OF THIS QUESTIONNAIRE: This "detailed" questionnaire asks you to tell us in what situations your officers might use body armor, and under what circumstances you have had officers wounded or killed where body armor might have prevented injury or death. YOUR answers will be used to determine where further research and development is needed.

GENERAL INSTRUCTIONS:

- 1. Fill in the questionnaire completely. Even if you do not have all the information you need "at your fingertips", please make your best effort to supply every answer AS ACCURATELY AS POSSIBLE.
- 2. Answer all questions for YOUR OWN DEPARTMENT. Do not attempt to supply information that might exist in some other department.
- 3. The results of this questionnaire will be compiled by computer. It is very important that you follow directions and answer every question legibly and in the boxes and spaces provided.
- 4. No individual department will be identified in the report of this survey; the results will be published in tabulated form.
- 5. Additional instructions for filling in your answers appear after some questions. Follow the directions given.
- 6. Please PRINT all comments or answers CLEARLY.
- 7. When this questionnaire has been completely filled in; place it, with the other questionnaires sent to your department, in the stamped, addressed envelope supplied. Return all of them to:

 Technology Building, All0

 National Bureau of Standards

 Washington, D.C. 20234
- 9. Remember that it is only by getting YOUR answers to these questions that the Laboratory will know what police body armor should be designed to withstand.

SECTION I: USE OF BODY ARMOR

(37-38)	Patrolcar Armor
(39-40)	Ballistic Helmets
(41-42)	Special Armored Cars

	10.	Do you have any comments about the use of, or problems with the use of body armor or ballistic protective items?
43-44)		

These questions were added to the Police Equipment Survey at the request of the U. S. Department of the Treasury. The Treasury Department would like to find out what sorts of problems police departments face in confiscating and disposing of weapons, what kinds of weapons they are now confiscating, and how they dispose of these weapons.

Remember that your department will <u>NOT</u> be identified to any agency or in any report of this survey. YOUR ANSWERS WILL BE GROUPED with the answers of other departments of the same type or the same geographic area. The data collected in this survey will <u>NOT</u> be turned over to the Treasury Department until identifying information has been removed from it.

APPENDIX B

DATA TABLES

B.l Advice to the Reader

- (a) The data presented in the following tables resulted from the responses of a stratified random sample (see Section 1.2) of police departments in response to a specific set of questions (see Appendix A). These data do not, in any way, reflect objective testing of any of the equipment by the National Bureau of Standards. The reader is cautioned to become familiar with the questionnaire and to evaluate the data in terms of the exact questions asked.
- (b) Tables have been numbered after the question number (e.g., the tables for Question 6A. would be numbered 6A-1, 6A-2, etc.). The data are usually presented by number of respondents and nearest whole percentage. Because of the statistical limitations imposed by the sample sizes used in this study, the reader is cautioned to be wary of assigning importance to percentage differences of less than 5% when percentages are based on all respondents, and to percentage differences of less than 10% when percentages are based on one of the subsample groups, (e.g., a particular Department Type or Region). No statistical tests of significance are reported.
- (c) These tables are based on the <u>responding</u> departments from the specific sample selected for this questionnaire. This sample was not proportional to the total population of police departments, and although it is possible to do so, the data in these tables have not been weighted to allow direct extrapolation to the total population.
- (d) In order to extrapolate to the total population from the respondent data presented in this report, use the following procedure: For each Department Type, multiply the percentage of respondents of a particular Department Type giving the answer of interest (See B.2 Data Tables, Appendix B) by the total number of departments of that Department Type in the population (See Table 1 102, Section 1.2); add those seven subtotals, and divide the total by the total number of police departments in the population (Table 1.2-2. The quotient of this division will be an estimate of the percentage of all U.S. police departments that would choose the answer of interest.
