1974 MALEA PAROLDES EXPRAPOLATED ANALYSIS

A central part of the Uniform Parole Reports program has been the annual publication of data reported by release year. This includes state and national tables for males and females with one, two, and three year follow-up.

These tables cover only those parolees reported to U.P.R. Several agencies report on random samples of various proportions and a few jurisdictions submit no data at various times. Thus, the national tables do not include all adults placed on active parole within the United States in a given release year.

This <u>Newsletter</u> will compare the standard and extrapolated tables for the 1974 national male one year follow-up. This will estimate the characteristics and performance of all men paroled in that year, as well as show any differences between the two tables.

METHOD

Data for this analysis were compiled for males only. There were only 1,493 females reported paroled in 1974 and this is not a large enough sample from which to reliably extrapolate state by state figures.

For states that coded on a sample basis the entire year, their data were multiplied by an exponent to approximate 100% of all parolees. California males,

¹National Probation and Parole Institutes, Uniform Parole Reports Project," 1974 Parolees, One Year Follow-up and Trend Analysis," Davis, California: National Council on Crime and Delinquency Research Center, September, 1976.

for example, are reported on a 15% random sample. Thus, each cell entry in their tables was multiplied by 6.67.

Several agencies reported for only part of 1974; in those instances a multiplier was used to simulate 100% reporting for the entire year. For the ten agencies which did not report, their total 1974 parole releases were distributed in the national pattern.

ANALYSIS

The SUMMARY TABLE, Part 1 shows that the total estimated number of males paroled in 1974 was 65,913. Comparing the standard and extrapolated tables shows that the attribute characteristics are equally proportioned in four of the five categories: probation or parole violation admission to prison, prior prison sentences, prior non-prison sentences, and prior drug abuse. The standard table has a 5 percentage point higher proportion of men with a history of alcohol abuse. The estimated proportion committing new major offenses was 2 percentage points higher in the extrapolated table.

The SUMMARY TABLE, Part 2 shows that the total estimated number paroled had 80% continued on parole, 4% absconders, 8% returned to prison as technical violators, and 7% recommitted to prison with new major conviction(s). Comparing outcome categories for the total number reported paroled shows the standard table has a 2 percentage point higher rate continued on parole whereas the extrapolated table has a 2 percentage point higher estimate of men recommitted to prison with new major conviction(s). Absconders were the same and there was only a 1 percentage point difference in technical violations. In the remaining groups the largest difference is 5 percentage points for those continued on parole with a probation or parole violation admission to prison.

CONCLUSION

This <u>Newsletter</u> compares the national standard and extrapolated tables for males paroled in 1974 with one year follow-up. It is estimated that 65,913 males were paroled with 80% continued on parole in the reporting period. There are only small differences in the proportional distribution of attribute characteristics and parole outcome between the two sets of figures.

UNIFORM PAROLE REPORTS

OBJECTIVES

Reliable nationwide statistical reports on parole based upon (1) uniform definitions of items and (2) individual persons paroled.

SPONSORS

Association of Paroling Authorities; Interstate Compact Administrators Association for the Council of State Governments; United States Board of Parole.

PARTICIPATING AGENCIES

Fifty-five agencies in fifty states, the Federal Government, and Puerto Rico contribute data at their own expense.

VARIABLES

Definitions of the variables are given in Uniform Parole Reporting Coding Manual, available upon request.

RELIABILITY

Reliability studies, which have resulted in the conclusion that the data collected are adequately reliable, are available upon request.

INFORMATION FEEDBACK

Production of yearly statistical tables for all participating agencies has been established. The preceding tables show the parole outcomes, analyzed by various offender characteristics, for all persons paroled by the agency indicated during the year shown. The parole outcomes are based on one year follow-up study, and persons discharged during that period are included. The percentages given are rounded to the nearest whole percent. The "1/2%" entries represent \% or less.
