An Introduction to the Analysis of Minnesota's Offender Based Transaction Statistics (OBTS)

Abstract

This report examines Minnesota's Offender Based Transaction Statistics system and discusses how data on criminal defendants is collected and stored. Although the data has shortcomings, it accurately describes the processing of defendants through the state's criminal justice system. Thus the data has many potential uses. The report addresses research questions and methods of analysis; several examples of the analysis of the data are also provided.

I. Introduction

The State of Minnesota collects a wealth of data on crime and the processing of persons by the criminal justice system. This data is gathered through the Criminal Justice Reporting System (CJRS) from police agencies, prosecutors, courts and corrections agencies across the state. Although summary crime statistics are published each year from this data source, other data in the system has not yet received any significant attention. In this report we describe what is available for analysis from this valuable but untapped data set, and we discuss how it can be used for the study of Minnesota's criminal justice system.

II. The Offender Based Transaction Statistics

To describe the CJRS data we must first retrace the steps in its collection. Police agencies report two kinds of data: the first on criminal incidents that come to their attention and the second on persons arrested for crimes. The crime incidence statistics become part of the well-known Uniform Crime Reports (UCR) and are published by the Bureau of Criminal Apprehension (BCA) in Minnesota and subsequently by the FBI. The reports on persons arrested for crimes start the flow of information on criminal defendants known as the OBTS or Offender Based Transaction Statistics. It is the OBTS data that concerns us here.

An arrest report is completed and a copy forwarded to the BCA for everyone—juvenile or adult—arrested for any offense except a traffic offense. If the police agency has a computer terminal linked to the state's MINCIS computer network, the arrest data can be entered directly

onto the system. If the person arrested is an adult (or certified juvenile) and the crime is a felony or gross misdemeanor, a copy of the arrest form is also forwarded to the local prosecutor's office.

The prosecutor must continue the tracking of the defendant. He completes the arrest/prosecution report form and sends copies to the BCA and to the court of first appearance. For each major court proceeding (first appearances in county and district courts and those involving a change in charge) another form must be completed by the court and again sent on to the BCA. When the defendant's case is disposed of or a conviction obtained, this must also be reported. The tracking of convicted criminals proceeds with a sentencing report and with reports that are submitted by whichever correctional authority has custody or supervision.

The BCA enters all reports onto the state's computer system, which is maintained by the Department of Administration's Information Systems

Division (ISD). Periodically the computer files are sorted to merge new records with those previously submitted. This data, which is physically on magnetic tape, is available for analysis with the permission of the BCA.

During the building of the OBTS data file, the names of criminal defendants are removed; from that point on individuals are anonymous, being identified only by number. No record is kept of which person has which number. This protects the privacy of the individual while still making possible analysis of the data on an individual basis. The identifying number is that assigned to a person by the arresting agency at the time of arrest for a particular criminal incident (which may encompass several crimes or charges). That is, the number assigned is that of the incident. If a person were arrested several times, perhaps in different areas of the state, he would be tracked with a different number for each

incident. All records for an individual for a given incident number are arranged together on the computer in the tracking sequence. If several persons are arrested for a single incident their records relating to that incident are kept adjacent to one another in the file.

For purposes of analysis the data has a few shortcomings. These are not fatal, but they do limit what might be done with the data. The chief liability is that of incomplete and inaccurate reporting. We consider this problem more extensively below. A second complication is reporting delay. The data is not timely enough to know the precise state of the criminal justice system on a daily or even monthly basis. To be sure of including all pertinent and reported records for a given time interval, one must anticipate a lag of several months. Another constraint on analysis is the lack of criminal history information in the OBTS file. One cannot determine whether a person being tracked has a prior record. This makes it impossible to study recidivism or the differential treatment of defendants as it may hinge on their criminal history. (Criminal history information is maintained in a separate Computerized Criminal History file—CCH—by the BCA.)

Despite its limitations, the OBTS data offers extraordinary opportunities to examine the flow of people through the criminal justice system. Many important questions can be answered on topics such as: court processing time, sentencing patterns, the charging of crimes, the differences among counties or judicial districts, the outcomes of trials, the usage of public or private attorneys, and differences owing to race, sex or age of defendants. Very importantly, system activities and flows can be monitored for changes in the system: to evaluate intended changes

and to warn of the unintended.

While data collection and training for the CJRS are the responsibility of the BCA, the Law Enforcement Assistance Administration has provided funds for the analysis of OBTS data to the Statistical Analysis Center (SAC), which is under the administration of the Crime Control Planning Board. The MJISAC or Minnesota Justice Information System Advisory Council acts as an advisory body to the SAC and to Minnesota's computerized criminal justice information program generally. Because the state's computer system is not well-suited to data analysis, the SAC has obtained a copy of the OBTS data set and has undertaken its analysis on the University of Minnesota's computer.

The amount of data is so extensive that it is not economical to do an analysis on the whole data set. Furthermore, the OBTS data is not arranged conveniently for statistical analysis. Therefore we have constructed two smaller data sets from the original by removing much of the redundant and, for our purposes, unnecessary information. And we have rearranged one of these two data sets so that data analysis can be done with SPSS, The Statistical Package for the Social Sciences, (an easy to use computer program).

Our plan is to have separate data files for each year's data. That is, a file will contain all cases that begin with an arrest in that year and follow each case to completion, even if it runs into the succeeding year. At this writing, the 1975 files are ready for analysis. (A complete description of the data files follows in the Appendix.) All further discussion of the OBTS data in this report is based on analysis of the 1975 data only.

III. Data Validity

The foregoing description of how someone is tracked through the criminal justice system must be tempered with the knowledge that occasionally a report will not be filed or that errors will be made. The extent of unreported or erroneous data is hard to estimate. Experience indicates that the data on crimes and arrests is the best reported of any in the system. Only a few police agencies in the state fail to submit this information. After arrest, however, the proper tracking of a defendant is less certain. In the 1975 data, the prosecutors' reports were the most frequently missing of all the record types. More recently, however, reporting by prosecutors has greatly increased.

Fortunately there is so much redundancy in the reporting that even without a prosecutor's report and in spite of missing or faulty data we can still analyze the processing of individuals who have both arrest and judicial records present. Therefore, we have chosen to eliminate the prosecutors' records from the 1975 file used for statistical analysis. And we have used the redundancy in the reporting forms to check on certain types of errors in reporting. We are thus able to correct the files in many instances where an error occurs.

The reports from correctional agencies, the final stage in the tracking process, are not very informative, mainly acknowledging custody of defendants after sentencing. For research purposes the bulk of interesting data is that provided by the arrest and court records.

To assess the completeness of the OBTS court data we can compare it with statistics published in the <u>Annual Report of the Supreme Court.</u> This

publication gives totals for case terminations, dismissals, and trials for each county's district court. The reliability of this data is also open to question, but it is collected separately from the OBTS data.

The results of a comparison between OBTS and Supreme Court data follow.

Of the 87 counties in Minnesota, we found that only about a dozen have seriously incomplete reporting of OBTS court data in 1975. And only four appear not to report it at all. (For a list of these counties please see the Appendix.) Most of these counties have so few criminal cases in a year that their inclusion is not necessary to statewide data analysis. An exception is Hennepin County, which we estimate reported on only about half of its court cases in 1975. With Hennepin County being the site of the state's largest district court, missing data here will cause any statewide totals based on the OBTS data to fall significantly short of actual. We anticipate that completion of Hennepin County's Subject-In-Process computer system and the Minneapolis Police Department computer system will greatly improve reporting in the future.

In many research questions we are not concerned with totals but, instead, with percentages or proportions of defendants falling in particular categories; for example: the percentage of dismissals among burglary defendants. The Hennepin County data can be used for such analyses by itself but not by inclusion with statewide data. Alternatively we can also multiply Hennepin's totals by a correcting factor to obtain an estimate of state totals. The completeness of each county's data is indicated by a special code in our reconstructed data file (see the Appendix).

In examining court statistics we detected a number of counties which at first seemed to have incomplete reporting but were later found to have

only certain errors in reporting that confused the analysis. Once observed, this problem was corrected by programming "around" the errors and reinterpreting the records. For those readers familiar with reporting requirements we briefly mention the most common reporting errors in 1975:

- the inclusion of a person status code in the place of a judicial disposition code when a defendant is convicted or pleads guilty;
- 2) a guilty plea not entered in the plea code although the guilty plea is specified in the disposition code;
- a guilty plea shown by the plea code but not by the judicial disposition, which may show only a continuance on the date of conviction.

Recently the BCA has improved its manual verification procedures and revised its forms—all of which should reduce the liklihood of errors in data subsequent to 1975.

Additionally, we have noted that age, sex, and race information may not be present for a defendant. Primarily this occurs when the arrest report is not filed. (This type of information is captured only on the arrest report.) Missing arrest reports were fairly common in some counties, but the reasons for this are not clear. Another problem encountered is that a dismissal may not be reported even though a prosecutor decides not to proceed with the case. That is, a dismissal is not formally obtained in court. (This last situation seemed to occur frequently in Chisago County.)

The comparison of OBTS data with Supreme Court summary statistics gives good assurance that the OBTS data accurately describes the processing of felony defendants. The few counties whose 1975 data is of questionable validity for statistical analysis are listed in the Appendix.

We have also been able to make another more limited test of the OBTS data. Researchers at the Crime Control Planning Board had previously drawn a large sample of cases from prosecutors' files in several counties. This data was used for determining court processing time, among other purposes. We have found a close correspondence when average court processing time is calculated from the OBTS data for a county and compared with the estimates arrived at independently from the case samples. This is a second confirmation of the representativeness of the OBTS data.

Because processing time—in this case the time from arrest to final disposition—is an important measure of court performance, we have chosen to compute the processing time for each person being tracked by the OBTS system and have inserted it in the reconstructed data file (which is described in the Appendix).

Overall, Minnesota's courts do an excellent job of reporting;
Minnesota ranks among the best in the nation in this. We anticipate
that, as more use is made of the data, the quality of reporting will
continue to improve.

IV. Data Analysis

Our aim here is not to present a mass of data on Minnesota's criminal justice system. Rather, we wish to suggest—and invite suggestions—on possible uses for the data. Applications might include regular reports as well as investigations on specific topics.

The possibilities for analysis are, of course, limited by the kinds of information gathered by the various OBTS reporting forms.

(These are described in detail in the Appendix.) For statistical analysis we are concerned with how individual defendants can be classified,

aggregated, and compared by groups. Briefly put, these are the alternatives: We can aggregate defendants by age, sex, or race; and we can also group them by the nature of the crime charged against them, by what happens to them in the system, and by location in the state.

Comparisions among groups can be made over time as well.

More specific examples of research questions that the OBTS data can answer include: What percentage of burglary defendants (or other types of defendants) are convicted? Does this percentage vary significantly among counties? Is the conviction rate higher for those of minority races? Is a defendant more likely to be convicted if there is a trial? If there is a public defender? How likely is it for a convicted burglar to get probation or a suspended sentence? Do sentences vary significantly from one area of the state to another? Are a greater percentage of convicted burglars going to prison this year than last? And so forth, for any type or groupings of the crimes tracked.

If OBTS data is summed or averaged for each county, it can be merged with other county-level aggregate statistics. We have criminal justice expenditure and employment data for each county as well as court case-loads, crime and arrest totals, and demographic information. When analyzed in combination, these statistics can reveal much about the costs and performance of criminal justice at the county level. One might investigate, for instance, those factors which lead to higher conviction or dismissal rates, or estimate the costs of processing defendants. Also available are computer programs for plotting data on a map of Minnesota counties. (An illustration is provided below.)

Before one can do any analysis of the OBTS data, a few general questions must be dealt with. These mainly involve decisions by the

researcher on how to handle certain types of OBTS records. Specifically, one must decide: (1) what types of crimes are of interest and how broadly the crime type is defined (the legal definition of a crime may be too narrow for purposes of statistical analysis); (2) what to do with defendants having multiple charges, possibly for different crime types; (3) what to do with defendants having more than one final disposition; and (4) how to compare crimes and sentences of different severity.

While it is usually desirable to keep as much information as possible in an analysis, the complexity of handling multiple charges, crimes, and convictions for a large number of defendants will likely exceed the value to the analyst of that information in its full detail. To simplify the record on an individual, for instance, one might consider only the most serious offense charged. Or in looking at convictions, one might be concerned only with distinguishing between those sentenced to confinement and those not.

For the analyst's convenience we have set up three separate data sets based on the OBTS data. Each set has a different level of detail and complexity. Thus at the researcher's option he may analyze the complete OBTS file for every defendant—which is difficult and expensive in computer time— or employ a reduced data set which incorporates only the most frequently wanted information. One of the reduced data sets, which is fully described in the Appendix, is a completely restructured and recoded version of the original OBTS data. This data set has been designed to make analysis as convenient as possible. To use it requires only a familiarity with an analysis program such as SPSS (Statistical Package for the Social Sciences). (The other data sets will almost certainly require a knowledge of FORTRAN or COBOL.)

In the simplified and recoded data set, all the information on a person (for a given incident) is kept on the computer's equivalent of a single keypunch card. For the other two data sets the number of "cards" per person may vary; often there may be a half dozen or more.

Another simplification taken when recoding the data was to drop the statute number of the offense charges (which is recorded in the OBTS file) and keep only an abbreviated uniform offense code (UOC). (The first two digits are kept.) This means, for example, that everyone charged with a burglary-related offense, such as attempted burglary or possession of burglary tools, is lumped together. A researcher concerned with the details of offenses must revert to using the more cumbersome data files.

A valuable feature of the uniform offense code is that the code number is itself a rough measure of the relative severity of the crime: generally, the lower the number, the more severe the crime. In the simplified data set, the charges against a person are arranged in order of decreasing seriousness. Where possible, a court disposition and sentence are matched with the respective charge. Court dispositions have also been recoded in this data set so that the code number is a measure of severity. An additional code indicates whether the accused was convicted of at least one charge or had all charges dismissed or acquitted. (This simple representation of what happened to a defendant is not present in the original OBTS file, which is oriented more to describing the outcome for each charge rather than for each person.)

We conclude with several examples of the types of analysis now possible with the OBTS data. The first is a breakdown for burglary

defendants of the probabilities of conviction, a stayed or suspended sentence, and a prison term of one year or more; these figures are reported in Table 1 for each of the state's judicial districts. The average processing time for burglary defendants is also shown. This kind of analysis may point out variations in prosecution and sentencing across the state. The cost of such an analysis is less than two dollars (neglecting the costs of preparing and maintaining the data files).

As a second example we tested for several differences in how Whites and Indians might be processed.* Looking at averages for all convicted defendants, we found no differences between Whites and Indians on these measures (variables): the incidence of guilty pleas, the type of attorney (public or private), the average processing time, the number of charges, and the length of confinement among those sentenced. Similar comparisons are also possible for any of the other variables listed in the code books (see the Appendix), such as age, sex, or crime type.

The SPSS program which made the White-Indian comparison (using statistical T-tests) is shown in the Appendix as an illustration of how to use the simplified OBTS file.

^{*}This is by no means a comprehensive analysis of how Indians fare in the criminal justice system. But such a study is being conducted under a grant from the Crime Control Planning Board to the University of Minnesota; OBTS data will be used in the comprehensive study.

TABLE 1.

CASE OUTCOMES FOR BURGLARY DEFENDANTS (1975)

Probability o Conviction if Charged With District Burglary		Probability of Stayed or Suspended Sentence if Convicted	Probability of Prison Sentence of 1 Year or More if Convicted (not Stayed or Suspended)	Average Processing Time from Arrest to Final Disposition (All Burglary Defendants) (months)		
1.	80%	10%	12%	3.0 mos.		
2	65%	51%	9%	2.7 mos.		
3	60%	51%	19%	2.3 mos.		
4	60%	30%	24%	4.3 mos.		
5	82%	21%	35%	2.4 mos.		
6.	78%	60%	13%	2.4 mos.		
7	70%	20%	11%	2.8 mos.		
8	76%	21%	20%	1.7 mos.		
9	51%	47%	17%	1.8 mos.		
10	70%	35%	25%	2.2 mos.		

Ranges:

Probability of Conviction	51% - 82%
Probability of Stayed or Suspended Sentence	10% - 60%
Probability of 1 year Prison Sentence if Convicted	9% - 35%
Average Processing Time, All Burglary Defendants	1.7 mos 4.3 mos.
Total Sample of Burglary Defendants	N = 981

The OBTS data can also be used to describe and analyze the processing of criminal defendants in a single county or to compare different counties. An example of the former is provided in Figure 1 which describes Ramsey County District Court activity in 1975. During 1975 about 900 persons were prosecuted for felonies or gross misdemeanors in Ramsey County. Of these about 650 (72%) were convicted on some charge, mostly by a plea of guilty--550 (75%). About 600 defendants received sentences, of which half were either stayed or suspended.

A final example is provided in Figure 2 which illustrates the levels of court activity by county on a map of Minnesota. It should be noted that the map in Figure 2 is an illustration of the type of map that can be easily and cheaply generated by current computer programs. It is recognized that such a map has limitations for identifying specific counties, and that further work would be necessary to prepare such a map for more formal presentations, etc.

These examples, and the report itself, are meant to be only an introduction to the OBTS system and what its potential is for assessing the state of criminal justice in Minnesota. How the system is used will depend largely on the interests of system personnel and policy makers. Effective system usage will also require an ongoing effort to organize and maintain OBTS data files of the types described here. This will be especially crucial in 1978 when many reporting changes are being implemented. And the success of the system will continue to be highly dependent on the training provided throughout the state by the staff of the Bureau of Criminal Apprehension.

A. DESCRIPTION/STRUCTURE OF OBTS FILES

1. Minnesota OBTS Master File

The Minnesota OBTS Master File contains information on the processing of persons by the criminal justice system. The file has a hierarchical structure based on arrest reports filed by police agencies. An arrest report may record the arrest of one person on a single criminal charge, for example, burglary, or the arrest of a number of individuals on multiple charges, for example, three persons arrested for assault and robbery. Each individual is tracked separately by the system under a control number assigned on the basis of the arrest report.

The processing of offenders is recorded on five distinct types of records. Each record type provides information about processing at a particular stage of the system and corresponds to a report submitted by a criminal justice agency to the Bureau of Criminal Apprehension (BCA). (For a complete description of these reports and reporting requirements see the Minnesota Criminal Justice Reporting System (CJRS) Operating Manual.)

The five record types and the data contained on each are summarized below:

Arrest Records -- describe the offender (age, race, sex, etc.);

the offense (uniform offense code, statute

number); and the arrest (arresting agency,

arrest disposition, date of arrest).

Prosecution

Records -- describe the prosecution decision

regarding the arrest (prosecution agency,

prosecution decision, date of decision).

Proceeding Records

-- describe the judicial proceedings (court agency, type of proceedings, court disposition, date of disposition, etc.) and the status of the offender (custody status, plea, type of attorney).

Sentencing Records

-- describe the sentencing of an offender (type of sentence, date, time/fine imposed, etc.).

Custody/ Supervision Records

-- describe the status of an offender in custody or under supervision.

All records in the file are 126 characters in length and each has its own data format. Section B of the Appendix describes these formats. The first six fields of each record are identical and the file is sorted on these fields -- controlling agency (where the offense took place), control number (assigned to each arrest report), charge number, person number, record type and date of action. An example of the data is contained in Figure A-1. The structure of the file is illustrated in Figure A-2. Records are first grouped according to controlling agency, then sorted successively by control number, charge number, person number, record type and date (the most recent date first). Note that the number of record types and records are both variable.

Figure A-2: Structure of the OBTS Master File

2. Reduced OBTS File

The OBTS master file contains information on all persons arrested in Minnesota for any offense except traffic offenses (disregarding the problem of incomplete or faulty reporting).

For 1975 there are about 100,000 records in the file. However, the majority of these are arrest records of persons who are not subsequently tracked through the system for various reasons, primarily:

- 1. The person is a juvenile -- juveniles are not tracked by the system;
- 2. The offense is a misdemeanor -- only felony and gross misdemeanors are tracked; or
- 3. After arrest there is no subsequent prosecution.

 In each of these cases a person is arrested and recorded in the system but not tracked further. This happens to about three-fourths of all persons arrested in Minnesota. Because we are often most interested in those who are tracked through the system, analysis of the entire data file is not economical.

 Therefore, we have constructed a reduced file by retaining information only on persons who continue in the system after arrest. This reduces the number of records to about 35,000.

 In addition, the new file has been restructured so that each person's records are grouped together before sorting on charge numbers. The program used to accomplish this reduction and rearrangement is reproduced in section E of the Appendix.

3. OBTS Individual File

The reduced OBTS file is still quite large -- 35,000 records -- and contains a great deal of redundant and, for many purposes, unnecessary information. In addition, because of the variable number of records per person, analysis of the data requires knowledge of computer programming and a great deal of time. To facilitate analysis we have further reduced the file to about 6,000 records by removing much of the redundant and less useful information. In this simplified and recoded file all information on an individual (for a particular incident) is stored on a single record. This file is compatible with statistical packages such as SPSS. An example of the data in the individual file is provided in Figure A-3. Section B contains a code book for this file.

The final file manipulation performed was transforming the individual file into an SPSS system file. The SPSS program used for this is also reproduced in section E as is an example of use of the SPSS system file.

VARIABLE DESCRIPTIONS/CODES

Arresting Agency (AAG) - The NCIC identifier of the agency making the arrest. This may be omitted if the controlling agency and arresting agency are one and the same (see the CJRS Operating Manual for agency identifiers).

Action Date (ACD) - Date of the completion of any specific action or proceeding by the court. If the report/entry is in relation to a trial, the action date will represent the starting date of the trial.

Arrest Charge Number (ACH) - Used to identify the charge or charges for which the individual is arrested. There may be multiple changes.

Arrest Disposition (ADN) - The initial status disposition of the individual arrested (posted bail, held in custody, etc.).

Administrative Discharge (Military Only)	201
Deceased	202
Deportation	203
Granted Voluntary Departure from U.S.	204
Currently Being Held	205
Released on Bail or Own Recognizance	206
Released No Formal Charge	207
Released no formal charge-Police	A207
Released no formal charge-By Prosecuting	
Attorney	B207
Released no formal charge-Withdrawal by	
Complainant	C207
Juveniles handled within department (W&R)	D207
Turned over to Another Agency	208
Other law enforcement	A208
Referred to welfare	B208
Referred to criminal or adult court	
(Juveniles only)	C208
Corrections (parole violations,etc.)	D208
Wanted	209
Bail forfeited	210
No bill returned (Grand Jury)	211
Referred to juvenile court	212
Consolidated with another arrest	213

Attorney Code (ATY) - Will indicate the type of attorney the defendant had for the specific proceeding.

H - Hired Own

P - Public Defender

C - Court Appointed

S - Defending Self

A - Other

Controlling Agency (CAG) - The NCIC identifier of the agency within whose jurisdiction the incident occurred (see the CJRS Operating Manual for agency identifiers).

Supervision Agency Assigned (CAP) - The NCIC Identifier of the agency responsible for the individual when assigned to supervise probation. This may be the State Department of Corrections - Field Services Division, a County Probation office, a Community Corrections Program under county or state direction, the court itself, or any other criminal justice agency assigned the responsibility for the individual (see the CJRS Operating Manual for agency identifiers).

Custody Agency Assigned (CAS) - The NCIC Identifier of the facility where the subject will be institutionalized as assigned by the court (see the CJRS Operating Manual for agency identifiers).

Charge Code (CCD) - Will identify the type legal code under which the individual is being charged.

SS - State Statute

OR - Ordinance

TT - Federal Title

OT - All Other

Court Count Number (CCT) - Sequential number assigned to the counts or charges against the individual. This number is assigned sequentially; the first count being 01 and each subsequent count numbered 02,03, etc. following the order of the counts or charges as listed on the complaint or indictment.

<u>Court Disposition Numeric (CDN)</u> - Indicates the current status/disposition of the court for the specific proceeding.

Acquitted by Other Acquitted by Reason of Insanity Acquitted by Reason of Incompetence Case Continued Without Findings Charge Dismissed Charge Dismissed Parole Violator Charge Dismissed Due to Insanity Charge Dismissed Due to Mental Incompetence Charge Still Pending Due to Insanity Charge Still Pending Due to Incompetence Convicted by Court Convicted by Jury Convicted by Plea Convicted by Plea Convicted by Jury of Lesser Offense Convicted by Plea of Lesser Offense Deferred Disposition Dismissed - Civil Action Extradited	301 301 302 303 304 305 307 307 307 307 307 307 307 307 307 307
Appeal/Post Conviction Relief - Filed Appeal/Post Conviction Relief - Dismissed Appeal/Post Conviction Relief - Affirmed Appeal/Post Conviction Relief - Reversed Appeal/Post Conviction Relief - Reversed and Remanded Remanded to Court of Origin	360 361 362 363 364 366

Amount of Fine (CFN) - Indicates the amount of money to actually be paid as a fine, to be paid as restitution and/or to be paid as costs involved.

Actual Time to be Served (CMT) - Indicates the time that has been assigned by the court to be served in an institution. The institution could be a state correctional facility, a county jail, a hospital or some other detention type of facility (years, months, days).

Actual Time on Probation (CPR) - Indicates the amount of time the court has assigned for probation; includes supervised or unsupervised probation (years, months, days).

Sentence Disposition 1 (CP1)

Sentence Disposition 2 (CP2)

Sentence Disposition 3 (CP3) - Indicates the type of sentence or alternative correctional program. At least one code should be indicated. The other areas may be blank or used to further explain or define the sentence or correctional program.

Bad Conduct Discharge (Military Only)	330
Bail Forfeited	331
Confinement or Fine - to be used to indicate	
that the defendant was not ordered to	
satisfy both, but only one or the other	332
Confinement in Hospital	333
Court Costs (only)	334
Death Sentence	335
Dishonorable Discharge	336
Fine Only	337
Fine and Court Cost	338
Forfeiture of Pay (Military Only)	339
Confinement Indeterminate	340
Confinement - Year(s)	A340
Confinement - Month(s) and Day(s)	B340
Confinement - Nights and Weekends	C340
Confinement - Weekends Only	D340
Confinement - Nights Only	E340
Split Sentence (confinement followed by	, -
probation)	F340
Indeterminate to Majority (to be used whenever	
a specific amount of time is not assigned	341
Confinement Life	342
Probation - Supervised	A344
Probation - Unsupervised	B344
Probation and Court Costs	345
Restitution (only)	346
Restitution and Court Costs	347
Probation and Fine	348
Imposition of Sentence Stayed	365
Counts to which disposition and sentence apply	
are unknown.	399

<u>Docket Number (DKT)</u> - An identifier assigned to the individual's judicial processing resulting from an arrest for a specific criminal incident.

Arrest Date (DOA) - Indicates the date an individual was arrested or if issued a summons, citation or notice to appear, the date of issue or date the individual submits to the authority of the court (month, day, year).

Date of Birth (DOB) - Of the individual to whom the report applies (month, day, year).

Expiration Date (EXD) - The date the individual is scheduled to be released from control of the Custody/Supervision agency (month, date, year).

General Offense Character (GOC) - Indicates a refinement of the Uniform Offense Code which further explains the count or charge as described in the complaint or indictment.

Z - Accessory after the fact

Y - Accessory before the fact

X - Aid/Abet

B - Assault to commit

A - Attempt to commit

C - Conspiracy to commit

F - Facilitation of

S - Solicitation to commit

T - Threat to commit

N - Not Applicable

Judicial Agency (JAG) - The NCIC identifier of the court where the judicial proceeding being reported took place (see the CJRS Operating Manual for agency identifiers).

<u>Judge Number (JNR)</u> - An identifying number assigned to each judge. This number may be assigned by the clerk of court.

<u>Custodial Agency (KAG)</u> - The NCIC identifier of the custodial agency having responsibility for the individual being reported about (see the CJRS Operating Manual for agency identifiers).

Control Number (OCA) - A unique identifying number assigned to a specific incident by the controlling agency. The first two characters indicate the year in which the incident was reported. For example, Case Number 50 for the year of 1975 would be designated: 75000050.

<u>Prosecution Agency (PAS)</u> - The NCIC identifier assigned to the prosecutor's office submitting report (see the CJRS Operating Manual for agency identifiers).

<u>Person Charged Code (PCA)</u> - Indicates how the individual was brought into the system.

1 - Arrest

2 - Summoned/Notified or Cited

Prosecution County Number (PCC) - Sequential number assigned to the counts or charges against the individual. This number is assigned sequentially, the first count being 01 and each subsequent count numbered 02,03, etc., following the order of the counts or charges as listed on the complaint or indictment.

<u>Prosecution Case Number (PCN)</u> - Specific number assigned by the prosecutor to the prosecution file or may be the same as the control number carried over from the arrest information,

<u>Prosecution Decision Date (PDD)</u> - Date the prosecuting attorney made his filing decision (month, day, year).

Plea Code (PLE) - Indicates the individual's plea as entered into the judicial record at specific proceedings.

N - Not Guilty

G - Guilty

Person Status Code (PSC) - Indicates the current status of the individual at the time of the report.

203 - Deportation

204 - Granted Voluntary Departure from U.S.

205 - Currently Being Held

206 - Released on Own Recongnizance

A206 - Released on Bail or Bond

270 - Data not Available

311 - Deceased

Person Sequence Number (PSN) - An identifying number assigned to an individual at the time of arrest for a particular incident. Where multiple arrests are made for the same incident, the first individual is given number 001, and each subsequent person arrested is assigned a number in sequence; 002, 003, etc. The PSN remains with the individual while proceeding through the criminal justice system for a specific incident.

Proceeding Type (PTY) - A code that indicates the type of court proceeding that has been completed.

FC - First Appearance in County Court

SC - Second Appearance in County Court

DC - First Appearance in District Court on Complaint

DI - First Appearance in District Court on Indictment

SD - Second Appearance in District Court

OH - Omnibus Hearing

PS - Plea Stage (if not part of another proceeding)

TR - Trial

NA - Notice of Appeal Filed

AR - Application for Post Conviction Relief

The following proceeding codes were used prior to the Rules of Criminal Procedure which were adopted in July, 1975.

AL - First Appearance - Lower Court

PR - Preliminary Hearing

TC - Trial Before County Court

NB - Grant Jury, No Bill

Al - Arraignment by Information

AD - Arraignment by Indictment

TD - Trial Before District Court

AP - Appeal

SP - Other

RACE (RAC) - Indicates race of the individual.

W - White*

N - Negro

I - Indian

C - Chinese

J - Japanese

0 - All others**

X - Unknown

*Includes: Mexicans and Latins

**Includes: Asian Indians, Eskimos, Filipinos, Indonesians,

Koreans, Polynesians, and other non-whites.

Remarks (REM) - Indicates other information which may be of importance.

Record of Conviction (ROC) - Indicates the conviction record of an individual.

F - Felony

G - Gross Misdemeanor

M - Misdemeanor

S - Imposition of Sentence Stayed

Sentence Carried Code (SCR) - Indicates if time to be served or probationary time assigned will be concurrent with another sentence or consecutive in relation to another sentence. Also used to indicate that a single sentence assigned applies to all (or another specific) counts involved in the case.

If Not Applicable - Leave Blank

1 - Sentence to be served concurrently with another

2 - Sentence to be served consecutively with another

3 - Single sentence encompasses all counts

Sex (SEX) - Indicates sex of the individual

M - Male

F - Female

<u>Sentencing Date (SND)</u> - Date sentence is pronounced by the court (month, day, year).

Stayed/Suspended (SSI) - Indicates a stay of execution or a suspension of all or part of a sentence which is imposed. If the sentence which is provided for under law is not imposed, e.g. a stay of imposition (imposition of sentence stayed), then this field should be blank.

Y - Stayed Sentence

S - Suspended Sentence

Blank - Not Applicable

Stayed/Suspended (SS2) - Indicates that a staying or suspending of part or all of the payment of funds assigned has occurred.

Y - Stayed Sentence

S - Suspended Sentence

Blank - Not Applicable

Action Date (SSD) - Date status reported becomes effective (month, day, year).

<u>Custodial Disposition Code (SSN)</u> - The status of the individual at the time of the report.

Absconded	401
Administrative Discharge (Military)	402
Certificate of Relief	403
Committed Suicide	404
Commutation of Prior Sentence Rescinded	405
Conditional Release	406
Conditional Release Revoked	407
Deceased	408
Discharged from Criminal Justice System	409
Escaped	410
Executed	411
Furloughed	412
Furlough Revoked	413
Mandatory Release	414
Mandatory Release Revoked	415
Pardoned	416
Paroled	417
Parole Revoked	418
Probation	419
Probation Revoked	420
Received	421
Released by Court Order	422
Released on Appeal Bond	423
Sentence Commuted	424
Work Furlough	425
Work Furlough Revoked	426
Transferred in from Other Institution	427
Released - Expiration of Minimum Time	428
Accepted Parole Jurisdiction	429
Accepted Probation Jurisdiction	430

State Code (STA) - Will identify the State of Minnesota (MN).

Start Date (STD) - The date a subject begins serving a sentence (month, day, year).

<u>Statute/Ordinance NBR (STU)</u> - The alpha/numeric value assigned to the specific offense as listed in Minnesota State Statutes or as listed in agencies legal ordinance book.

Trial Ending Date (TED) - Date of the completion or termination of a trial. This field will only be completed with proceeding types of "TC", "TD", or "TR" (month, day, year).

Type of Filing Code (TOF) - Indicates the type of filing the prosecuting attorney decided upon.

- C Complaint
- D Diversion
- I Indictment
- K Referred from U.S. Attorney " Not Prosecuted
- L Referred from U.S. Attorney Prosecuted
- N No Complaint Filed
- R Referred to City Attorney
- U Referred to U.S. Attorney

Total Time Assigned (TTA) - Will indicate the actual time assigned and imposed by the court. If the imposition of sentence is stayed, then nothing should be entered in the field (years, months, days).

Uniform Offense Code (UOC) - A code(s) used to identify the count(s) or charge(s) against the individual as specified in the complaint or indictment (see the CJRS Operating Manual for Uniform Offense Codes).

E. PROGRAM EXAMPLES

The following programs are provided as examples of use of the OBTS files described above. All were run on the University of Minnesota computer system.

1. Program to Reduce OBTS Master File

```
IDENTIFICATION DIVISION.
* THIS PROGRAM READS THE 1975 MASTER OBTS TAPE AND
* WRITES THOSE RECORD GROUPS WHICH HAVE MORE THAN AN
* ARREST RECORD FOR AN INDIVIDUAL.
* THE RECORDS ARE REGROERED SO THAT ALL RECORDS FOR ONE
* PERSON ARE GROUPES TOBETHER REGARDLESS OF CHARGE.
