APPENDIX A

STATISTICAL REPORTS

I. INTRODUCTION

In July, 1975, the National Legal Data Center, Inc., began operations as the national clearinghouse for the Career Criminal Program. The basic purpose which N.L.D.C. was obligated to fulfill in the first year grant was set forth on page 30 of the program narrative thereof:

"The national clearinghouse will function as a central repository for all legal, prosecutorial, and strategic information provided to local prosecutors on a 'direct action' basis with individual application to particular habitual offenders or career criminal issues. It has a vital central operational feature involving a direct personal interface with prosecutors and their day-to-day problems in dealing with a career criminal. In addition, it will maintain a data bank as the repository of all relevant data."

In the 15 and one-half months (through October 15, 1976) following the award of the clearinghouse grant, the Center has striven to meet these announced objectives through several means. This final report will develop the Center's activities towards these goals in 6 areas: (1) program coordination activities; (2) data collection activities; (3) data report generation; (4) technical assistance activities; (5) no-cost Career Criminal Program replication efforts; and (6) other analytical reports prepared. These 6 areas will be addressed in seriatum. By way of overview, however, significant activities will be here highlighted in summary.

During the first year, a significant aspect of the Center's program coordination and technical assistance activities has been on-site visits by Center staff members to operating or prospective Career Criminal Programs. During this grant term

individuals on the Center's staff have conducted 28 on-site visits to jurisdictions which were operating, implementing or considering the implementation of, the career criminal units. These visits encompassed trouble-shooting activities, information dissemination activities to new jurisdictions and data collection activities.

A second important aspect of the Center's coordination and technical assistance activities has been the sponsorship of regional and national conferences attended by operational personnel in career criminal units. During this grant term the Center sponsored a total of 7 national or regional career criminal unit conferences. At these conferences, career criminal unit operational personnel are allowed the opportunity to exchange strategies, problem solving techniques and other items of common interest to career criminal units.

The Center's data collection and disseminating activities are also a central feature of this grant award. During the grant term the Center designed and implemented a data collection system, implemented a computerized data information base and has generated data related reports to both L.E.A.A. and the participating jurisdictions. By the close of this grant term, the Center had fully inputted to its automated data base detailed individual Case Data Forms encompassing over 2400 disposed of defendants in all operating career criminal units. This data base then constituted over 2 million 4 hundred thousand separate characters of information covering defendant background, criminal history, charges lodged, times to dispositions and nature of dispositions.

About midway through this grant term, a decision was

made in conjunction with L.E.A.A. officials to expand the Center's technical assistance activity into a no-cost Career Criminal Program replication effort. That is, a decision was made to attempt to have district attorneys implement career criminal units without any direct federal funding, but with the full range of the Center's technical assistance. In July of 1976, the first of these non-funded programs became operational in the office of the district attorney of Ventura, California. By the end of the grant term a second program was operational in the office of the state's attorney for West Palm Beach, Florida. Furthermore, commitments to implement such programs had been received from the prosecuting attorney of King County (Seattle), Washington, Tarrant County (Fort Worth) Texas, and Santa Barbara County, California. The existence of these programs demonstrates that L.E.A.A. sponsored technical assistance can meet the central L.E.A.A. function of expanding apparently successful experimental programs in selected jurisdictions, without increasing federal funding and subsidization thereof.

As the grant term progressed, various career criminal units began to demonstrate operational successes and significant media interest was generated. By the end of the grant term feature articles on the Career Criminal Program had appeared in U.S. News and World Report, The National Observer, The Wall Street Journal and several feature stories on the program had appeared through the A.P. and U.P.I. wire services.

II. PROGRAM COORDINATION ACTIVITIES

The mainstay of the Center's program coordination

activities has been its program of on-site visits to participating jurisdictions and the sponsorship of regional conferences attended by jurisdiction personnel and interested agencies.

Initially, visits were made to each of the 11 original career criminal jurisdictions in order to monitor the project implementation at each site, and to train the particular jurisdictional data collection personnel in completing our Case Data Form which is filled out on every career criminal case.

After initial implementation on-site visits, visits were made in response to requests from either the particular jurisdiction or from L.E.A.A. and these visits were basically "trouble-shooting" in nature.

For example, at L.E.A.A. request, an on-site visit was made to the Salt Lake jurisdiction in order to correct what appeared to be an insufficient caseload in the career criminal unit. After analyzing the unit and engaging in negotiations with Salt Lake City personnel, expanded career criminal selection criteria were proposed by the Center's staff and thereafter implemented by Salt Lake. Again, at L.E.A.A. request an on-site visit was made to Manhattan in order to monitor what appeared to be an extremely slow start-up of that particular project. Again, after observing the operation and becoming cognizant of the peculiar problems extant in Manhattan, pursuant to recommendations, the problem was corrected.

In August of 1975, the Center initiated a series of national and regional conferences for career criminal jurisdiction personnel.

The purpose of these conferences is an informational exchange function between operating personnel (attorneys, law

enforcement and data collection) in the respective jurisdictions. Typically, the conferences have been two days in length. The morning of the first day of the conference generally consists of the presentation of progress reports by the project director or district attorney attending from each career criminal unit. The afternoon of the first day and the morning of the second usually is devoted to a roundtable discussion of specific issues relative to achieving the Career Criminal Program's goals, (eg., methods of speedy case filing, responses to defense dilatory tactics, liaison with other criminal justice agencies, office staffing and morale problems). The afternoon of the second day of the conference usually consists of a tour of the host jurisdiction office, concentrating on the case processing flow of career criminal actions.

The following is a detailed list of the on-site visits to operating or proposed career criminal units conducted by N.L.D.C. staff during the term of this grant;

OCTOBER 1975

San Diego, California

NOVEMBER 1975

Kalamazoo, Michigan
Detroit, Michigan
Columbus, Ohio
Indianapolis, Indiana

DECEMBER 1975

Manhattan, New York
Boston, Massachusetts
Houston, Texas
Dallas, Texas
Salt Lake City, Utah

JANUARY 1976

Houston, Texas

New Orleans, Louisiana

FEBRUARY 1976

Indianapolis, Indiana

MARCH 1976

Miami, Florida
Manhattan, New York

APRIL 1976

San Francisco, California

MAY 1976

San Diego, California
Kenosha, Wisconsin
Dallas, Texas
Providence, Rhode Island

JULY 1976

Ventura, California
Sacramento, California
Albuquerque, New Mexico
Seattle, Washington

AUGUST 1976

Las Vegas, Nevada

SEPTEMBER 1976

Portland, Oregon

OCTOBER 1976

Fort Worth, Texas

The following is a detailed specification of the national and regional conferences sponsored by the Center during this grant term:

AUGUST 1975

San Diego, California (national conference)

SEPTEMBER 1975

Washington, D.C. (national conference)

JANUARY 1976

Houston, Texas (regional conference)

FEBRUARY 1976

San Diego, California (regional conference)

APRIL 1976

Columbus, Ohio (regional conference)

JUNE 1976

New Orleans, Louisiana (regional conference)

Thousand Oaks, California (national conference
for data collectors)

In addition to the above specified on-site visits and conferences, four other meetings occurred during the grant term with N.L.D.C. staff which are worthy of note.

First, in May of 1976, the Center staff made presentations at a statewide meeting of prosecutors, business leaders and other elected officials in Columbus, Ohio, gathered together for a conference for a safer Ohio. The keynote speaker for this conference was The Honorable Richard Thornburg, Assistant United States Attorney General in charge of the Criminal Division. As an outgrowth of this conference, Akron, Ohio, has already indicated its commitment to implement a Career Criminal Program without federal funding during the year 1977.

In July of 1976, Center staff, in conjunction with L.E.A.A. staff was requested to prepare a briefing meeting for The Honorable Harold R. Tyler, Deputy Attorney General of the United States. At this in-depth briefing, presentations were made by L.E.A.A. staff, Center staff and the district attorneys of New Orleans and Dallas.

In August of 1976, the Center staff (accompanied by the district attorneys of Indianapolis, Indiana and Columbus, Ohio) made an in-depth career criminal presentation at the National District Attorney's Association national conference at Aspen, Colorado. It was a result of this presentation that The Hon. David Bludworth, State's Attorney for Palm Beach County, Florida, made his decision to implement a Career Criminal Program without federal funding.

Also in August of 1976, the Center hosted a Correctional Impact Conference composed of L.E.A.A. officials (including the Deputy Administrator) and correctional experts from around the nation, directed towards establishing a corrections component for the Career Criminal Program. The conference explored the current state of the art and explored those areas where pilot action programs could be funded as opposed to those where additional research must first be conducted.

III. DATA COLLECTION ACTIVITIES

One of the main objectives established in the first year grant for the Center was the design and implementation of a sophisticated data collection system creating a centralized data bank which would become a central repository of all relevant program data concerning operations and results.

In accordance with L.E.A.A. directives, and in order to achieve the above task, a decision was made early in the grant term that a data system of the required sophistication could only be achieved through the use of computerization.

As designed by the Center, the central feature of the data collection system is the Case Data Form. The Case Data Form which the Center has now developed accommodates over 2500 characters of information on each career criminal defendant. The form collects information concerning the demographic characteristics of the defendant, his criminal history, the charges lodged against him, the time and nature of various court events concerning the defendant in his processing through the criminal justice system, and the disposition imposed.

Copies of this form are distributed to the data collectors in each operating career criminal jurisdiction, along with a detailed data collection guide describing each item on the form and the appropriate methods of completion. The data collector then fills out a Case Data Form on each defendant when that defendant is initially selected for career criminal prosecution. A Xerox of this

initial report is forwarded to the Center. Thereafter, once the case has reached a disposition, the data collector completes all remaining items and then forwards the original form to the Center.

Once the forms arrive at the Center they are manually reviewed by the Center's legal staff and data collection personnel for completeness and logical consistency. If the form is incomplete, or if it does not appear logically consistent, then the data collector is contacted either by mail or telephonically, to determine the nature of the problem.

After passing initial review, the forms are entered on computer diskettes through the use of Sycor remote job entry intelligent computer terminals. The information on the diskettes is then transferred to tapes and transmitted telephonically to an IBM 370-158 computer located at the Systems Development Corporation in Santa Monica, California.

The data is then placed into an initial "holding" data base, where test runs are made to assure that no errors have occurred in the initial data entry and transmission process. Once the data clears this quality control it is then transferred over into the main data base.

Once in the main data base, the information is utilized to generate two basic types of reports. First, the data is utilized to generate the monthly statistical summary report. This report utilizes a program specially designed by the Center's staff and consultants to generate program operational information in

over 50 basic areas. This report contains information on items such as, number of defendants charged, charges by nature of crime, times required for processing to various points in criminal justice system such as arraignments or trials, the nature of the ultimate dispositional charge and the sentence imposed upon disposition. The specialized program utilized to generate these reports has sufficient flexibility that the statistical summary report can be generated on a monthly basis, a quarterly basis, an annual basis and for any particular jurisdiction or group of jurisdictions, or the entire national program effort.

The second category of reports which can be generated from the data base are those we term "ad hoc" or "special" reports. These reports can be generated utilizing either one of two general purpose data management systems available at the computer center. These are the DS3 data management system designed by the Systems Development Corporation or the statistical package for the social sciences. The special report capability present in these two systems allows the Center to correlate, cross-tabulate or dissect any of the information contained on the Case Data Forms.

By the end of this grant term, the Center staff had been able to fully enter into the data base, case data forms on over 2400 disposed of defendants, recording over 21,000 case processing events, including 10,000 court events and over one million characters of defendant demographic, criminal history and criminal event information.

This effort was no small task when one remembers that (due to delays in budget readjustment approval) the required computer hardware was not operational until approximately June 1, 1976 and only then could the extensive programming required for even the first data input begin. (The data entry program alone has fourteen overlays.)

Work was then completed on the programming necessary to generate the statistical summary reports, a presentation and analysis of which is presented in the next section of this report.

Requests for special runs began to come in, and in the latter half of July, for example, 54 special cross tabulations were prepared for San Diego, the results of which can be found in the San Diego Year End Report, already on file with L.E.A.A. As yet another example, an extensive series of cross tabulations was in process at the end of the grant term at the request of the MITRE Corporation for its evaluation effort.

IV. DATA REPORTS AND ANALYSIS

Based upon completed case data forms fully entered into the Center's automated data base for the first five quarters of the Career Criminal Program's operations nationally (through July 1, 1976) the following observations can be made about the "prospects" which face each defendant selected for Career Criminal prosecution:

While awaiting his trial, the Career Criminal defendant remained in jail (85% of the defendants remained in custody awaiting trial). His case was disposed of in less than three months (the median time from arrest to disposition was 85 days). The odds of his being convicted were almost certain (only 106 defendants were acquitted while 2,008 pled guilty or were convicted by trial). The charges upon which the defendant faced almost certain conviction were invariably the top felony as originally charged (89% of the defendants convicted by either guilty plea or trial conviction were convicted on the top felony as originally charged). Upon conviction, the Career Criminal defendant again faced an almost certainty of incarceration, rather than probation or some other diversionary treatment (93% of the convicted Career Criminal defendants were sentenced to incarceration).

The data upon which this analysis is based are presented as Appendix A to this report. Contained in Appendix A are Statistical Summary Reports for each of the first five quarters of national Career Criminal Program operations, followed by an aggregate report covering all of the data entered in to the base through the end of this reporting period.

Two observations should be made which have applicability to each of the summary reports and the aggregate total report. First, it should be remembered that the material in each instance presented for the first quarter of program operations (4/1/75 to 6/30/75) consists in the main of cases handled by the New Orleans Career Criminal Bureau. These are cases which were proceeding through the normal processing stream (and meeting the selection criteria) when they were included by the Career Criminal Bureau resulting in an instant caseload. It should also be remembered that these cases were very heavily comprised of cases disposed by guilty pleas, since the cases which had trial dispositions did not begin to appear until the second quarter. The significance of these factors as they relate to trends, will be discussed later.

Second, it should be remembered that the data presented in the aggregate report will not necessarily equal the sum of the data in the five quarterly reports since the aggregate report includes data entered during the sixth quarter of national program operations.

In order to highlight some of the trends and data presented in the summary reports contained in Appendix A, certain key elements are presented in table form with commentary upon the inferences which might be drawn therefrom.

TABLE 1

Convictions and Acquittals of Defendants By Quarters of Program Operation						
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Fifth Quarter	Total
Plead Guilty be- fore Trial	18	102	179	316	401	** 2008
Plead Guilty Dur- ing Trial	0	17	38	14	22	
*Jury Con- victions	5	45	102	169	166	
Acquittals	4	10	17	27	31	106

*Number does not include non-jury convictions

**Total includes non-jury convictions.

Table 1 discloses the number of defendants convicted and acquitted by quarter, and broken down by whether the conviction was through guilty plea or jury conviction.

The first significant fact to be noted from this table is that the "hard line" attitude taken by the Career Criminal Units with reference to plea bargaining has not resulted in their being swamped by jury trials. For the five quarter period 1295 defendants were convicted through pleas of guilty before trial as opposed to 582 being convicted by jury trials, or stated another way, in the aggregate, 69% of all convictions were obtained through pleas of guilty prior to trial.

By way of noting trends through the quarters, it becomes apparent that the percentage of guilty pleas vs. jury convictions was the highest (78%) in the first quarter of program operations and it was the lowest (63%) during the third quarter of program operations.

The "total" column in this table also notes that during the aggregate period 2008 defendants were convicted while 106 defendants were acquitted, or in other words, the conviction rate was 94%.

TABLE 2

Convictions of Defendants By Level of Offense By Quarters of Program Operation						
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Fifth Quarter	Total
Top Felony	20	142	280	453	528	1784
Other	2	9	52	57	65	224
Percent Disposed On Top Felony	91	88	84	89	89	89

Table 2 is a measure of the "quality" of the convictions obtained, in that it discloses the level of convictions to the top felony as originally charged, rather than a conviction upon some lesser charge. Although the aggregate average was a level of 89% of the defendants being convicted of the top felony, some variation is apparent, and which variation appears to be related to the data presented in Table 1.

The highest percentage of defendants disclosed in Table 2 who were convicted on the top felony, occurred during the first quarter (91%). The lowest percentage of defendants being convicted on the top felony occurred during the third quarter (84%).

This result appears to be directly correlated to the percentage of defendants "standing fast" for jury trials as presented in Table 1. That is, the lowest percentage of defendants receiving jury

convictions occurred during the first quarter, and the highest percentage of defendants receiving jury convictions appeared during the third quarter. Thus, the greater the tendency of the defendants to hold out for jury trials, the greater the likelihood that they will be convicted on something other than the top felony as originally charged. (Although the data for the first quarter also includes four acquittals, these were non-jury cases.)

A key factor to keep in mind from both Table 1 and Table 2 is that in the aggregate (and for each quarter of the operation) the Career Criminal Units have been able to maintain an extremely high conviction rate (94%) without "bargaining away" their cases on lesser dispositions.

TABLE 3

National Program Times To Disposition By Quarters of Operation					
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Fifth Quarter
Mean Time Arrest To Disposition	31	90	101	113	144
Median Time Arrest To Disposition	21	61	84	85	93

Table 3 presents both the mean and median times from arrest to disposition of defendants by quarters of program operations.

The first fact to note here is that both the mean and median times to disposition are extremely low for dispositions occurring during the first quarter. This is because dispositions occurring during the first quarter had the lowest percentage of jury trials, and primarily represented defendants who were willing to enter guilty pleas upon initial selection as career criminal defendants (it should be remembered as noted above, that the data is heavily weighted towards the New Orleans Unit).

It should secondly be noted that although the mean time from arrest to disposition remained relatively stable during the second, third and fourth quarters of operation, the mean time to disposition suddenly jumped between the fourth and fifth quarter (from 113 days to 144 days).

While this increase was noted, it was not a reflection of an overall slowdown in program case processing as originally might have been concluded. That is, when one examines the median time from arrest to disposition for cases between the fourth and fifth quarter, the increase in dispositional time is no where near as long (i.e., most cases were proceeding to disposition in an only slightly longer time period). This discrepancy between the mean and median times appeared to indicate that the arithmetic mean was being distorted by a relatively small number of cases which were taking a long time to reach disposition.

Further analysis of other data presented in the summary report confirmed this hypothesis. When we examined the material presented in the statistical summaries concerning the number of cases which had been pending for over 90 days, we uncovered a sharp drop in the number of over 90 day cases between the fourth and fifth quarters. (The number pending over 90 days dropped from 273 defendants in the fourth quarter to 162 in the fifth. It should also be noted that this drop between the fourth and fifth quarter in the number of cases pending over 90 days was not occasioned by an overall drop in the number of cases, since the percentage drop in the overall number of pending cases is approximately the same as the percentage drop of cases pending more than 90 days, i.e., the percent of cases pending more than 90 days remained constant between the fourth and fifth quarters and the actual number of such cases dropped drastically in spite of the increase in the mean time.)

Thus, it appears that the arithmetic mean (between the fourth and fifth quarters) is being distorted by a relatively small number of cases which the prosecutors simply have not been able to get to disposition.

TABLE 4

Pre-Trial Release Status of Program Defendants Awaiting Trial by Quarters					
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Fifth Quarter
In Jail	115	384	482	455	269
Out of Jail	60	71	87	73	45
Percent in Jail	66	84	85	86	86

Tables 4, and Table 5 following, are directed towards an analysis of the incarceration status of defendants selected for Career Criminal Program treatment.

Table 4 presents the number and percentage of defendants held in custody while awaiting trial by quarters of program operation. Here it should be noted that the general trend has been an approximate 85% of all defendants being held in jail while awaiting trial, except for the first quarter of program operations. This anomaly in the first quarter is a function of the already-noted fact that most of the first quarter defendants represented "pick-ups" by the New Orleans Career Criminal Bureau of defendants who were already proceeding through the processing stream (and presumably where the Career Criminal Bureau did not make the initial presentation on bail amount).

The remaining data discloses a clear trend of success on the part of Career Criminal Units in keeping targeted defendants in custody while awaiting their trial or other disposition.

TABLE 5

Convicted Defendants Sentenced To Incarceration By Quarters of Program Operation						
	First Quarter	Second Quarter	Third Quarter	Fourth Quarter	Fifth Quarter	Total
Regular Sentences	9	113	267	416	584	*1887
Special Sentences	3	33	38	64	86	

*Final total is adjusted downward for the 62 defendants who received both regular and special sentences.

Table 5 displays the number of convicted career criminal defendants sentenced to incarceration (as opposed to probation or psychiatric or drug rehabilitation facilities), as a function of both regular sentences and special sentences (i.e., habitual or second offender sentences).

Here the trend of those being sentenced to incarceration appears directly related by quarter of operation to the number of defendants being convicted in that quarter as reflected in Table 1. The total number of defendants (even compensated for by defendants who received both regular and special sentences of incarceration) represented in the aggregate 1887 defendants receiving sentences of incarceration. This figure should be considered in light of the total number of defendants, i.e., 2008, who were convicted as displayed in Table 1. In other words, 94% of the defendants convicted received sentences of incarceration.

V. TECHNICAL ASSISTANCE ACTIVITIES

The Technical Assistance Activities conducted by the Center have predictably, been many and varied in nature. Most of these activities have been outlined in other sections in this report. For example, the discussion of on-site visits and conferences under the coordination activities section, constituted a significant aspect of the Center's technical assistance. At these conferences and during these visits, strategic and legal techniques and strategies were exchanged between the various career criminal units and Center.

As yet another example, the data collection activities and data report generation sections highlight the activities of the Center in the data collection area. Here, training was given via on-site visits, plus a National Conference for data collectors. These being a mandated part of each career criminal unit's grant. The data thereby collected has been able to generate the types of reports outlined in the data report section. These reports have provided meaningful evidence of program progress (and/or problems) to the respective jurisdictions, to L.E.A.A., and when requested by L.E.A.A. to the media. It should be noted that these reports have played no small part in the now growing trend to implement the career criminal prosecution concept across the board in the criminal justice system.

Reference will here be made, however, to technical assistance activities conducted in areas other than the aforementioned efforts.

During the grant term the Center received numerous

requests for legal research technical assistance from the various jurisdictions. Examples of these would be Salt Lake City's request concerning the prosecution's right to a speedy trial under the Sixth Amendment, the request made by the Boston jurisdiction with reference to proximate causation of death in murder cases, the Dallas request relating to the admission into evidence of federal penitentiary records, and a request from St. Louis relative to the propriety of assistant district attorneys initially interviewing defendants before the appointment of defense counsel. In each of these aforementioned areas the Center engaged in individualized legal research specifically tailored to the jurisdiction and the issue presented.

Perhaps the most significant legal support effort conducted by the Center concerned the constitutional attack made on the career criminal prosecution concept arising out of the program in Ventura County, California.

Here the public defender attacked the Ventura (non-federally funded) career criminal unit on equal protection and due process fundamental fairness grounds. Immediately upon filing of the defense motion the Center began intensive legal research and submitted what ultimately became the district attorney's response to the motion. The motion was denied at the trial court and the defense then sought appellate review thereof in the court of appeal of the State of California, second appellate district. The defense contentions were rejected by that court. A petition for hearing in review thereof was then sought by the defense in the Supreme Court of California, which also rejected the application.

These two appellate court rulings utilizing the legal research conducted by the Center, constituted the first two appellate court rulings in the nation relative to the constitutionality of the career criminal prosecution concept. These two California rulings have been instrumental in rebuffing attacks made against the program in Portland, Oregon, and Boston, Massachusetts.

Other areas of technical assistance were not strictly in the "legal support" area. As an example, it became apparent early in the grant term based upon complaints from project directors, that a problem existed with reference to an inordinately long turn around time on FBI criminal history identification requests. Because of this the Center entered into negotiations with assistant director Stills, Chief of the Bureau's Identification Section. Out of these negotiations a program was implemented (including priority request selection criteria) to be utilized by each career criminal unit, a unique coded identifying system for indicating priority career criminal requests, and within the identification section bureau, an expanded specialized staffing section to handle such requests. Feedback from the respective career criminal units indicate this program has done much to alleviate the situation and as but one example the Denver unit (recently activated without federal funding) stated they were pleasantly surprised at the speed with which the bureau processed their special requests for records on over 180 targeted defendants.

Another example of this type of technical assistance would be the Center's establishment of an informal network between career criminal units which both may have contact with the

same defendant. Examples of success of this regard would be highlighted by experiences in Manhattan and Miami. In Manhattan and Miami. In Manhattan an individual was arrested on a robbery charge and although he was generally uncooperative with the police he made some reference in his background to Salt Lake City. The Center immediately contacted the project director of the Salt Lake City unit and within one-half hour, New York authorities were made aware of the fact that the subject was an escapee from a robbery sentence at the Utah State prison.

The Miami unit contacted the Center with reference to the individual who appeared to be operating as a hired "hit man", and who had made two attempts on the life of a high-level narcotics informant developed by Miami authorities. Here again it was suspected that the subject had extensive contacts with Los Angeles authorities. The Center contacted the Los Angeles district attorney's office, the Los Angeles police department and the Los Angeles sheriff's office and within one day, was able to forward documentation to the Miami authorities establishing that the suspect (under a different name) had an extensive California felony record and was also a prime suspect in a murder in Los Angeles. This documentary evidence along with relevant first-hand testimony establishing that the two individuals were indeed one in the same, allowed the Miami jurisdiction to enhance the Florida charges under the Florida habitual offender statute to such that the individual, upon conviction in Florida will face a mandatory life sentence.

Another significant area of technical assistance during the grant term has been the dissemination of information concerning the career criminal prosecution concept to other district attorneys

offices, and interested criminal justice system personnel.

To this end, the Center has prepared detailed case flow analyses on each of the 11 original career criminal jurisdictions. Each analysis contains that jurisdiction's selection criteria, then further details in narrative and flow chart form its case processing procedure prior to the implementation of its career criminal unit, and then proceeds to discuss in narrative and flow chart form the intervention points altering the normal procedure occasioned by implementation of the career criminal prosecution concept.

These analyses have enabled the Center to provide an interested district attorney with a comprehensive picture of the various types of career criminal models in use. These analyses were also instrumental in providing the MITRE Corporation with the information necessary for its selection of the four career criminal units to be the object of their program evaluation.

As media coverage of the career criminal program expanded throughout the grant term, so also did the number of inquiries received by the Center for information with reference to the career criminal prosecution concept. By the conclusion of the grant term the level of such inquiries had expanded to an average of 19 inquiries per month.

As a final product (discussed elsewhere) the provision of these case flow analyses is now being superseded with a "How To Do It Manual", presenting in more detailed form to any interested district attorney the points and issues to be confronted in implementing a Career Criminal Program.

VI. NON-FEDERALLY FUNDED CAREER CRIMINAL REPLICATION EFFORT

After discussions with Jim Swain, Chief, Adjudication Section, Office of Regional Operations, commencing in April of 1976, it was decided that a major effort would be undertaken to study the feasibility of having various district attorneys' offices implement career criminal units without any direct federal subsidies, but with full range of technical assistance services provided by the National Legal Data Center. This decision was predicated upon the thesis that L.E.A.A. funds are essentially "seed money", to encourage the limited initial implementation of innovative programs, which upon demonstrating merit, are to be implemented on a more universal thesis utilizing locally available resources.

The decision was made to initially target the office of the district attorney of the county of Ventura, California, due to its close geographic proximity to the Center. Ventura is a medium size district attorney's office covering a county with a population of slightly over 450,000 and manned by a staff of 40 attorneys plus support personnel.

Initial contacts with the Honorable C. Stanley Trom, District Attorney of Ventura were favorably received and a decision was made to present the issue to the chiefs of all law enforcement agencies in the county to determine if they supported the concept and were willing to commit some of their resources towards effective implementation thereof. The Center staff made a presentation at a regularly scheduled meeting of the heads of all these law enforcement agencies, and the response was enthusiastic. Based upon these demonstrations of support a program work

plan was developed outlining the policies to be established and the staff necessary for implementation thereof. On-site visits were made to determine the case processing flow and to examine past filings with a view towards a development of appropriate selection criteria.

A target date was established of August 1, 1976, for actual implementation and two attorneys (a number now increased to three) and a senior investigator from the district attorney's office were assigned to the unit, along with having a designated senior police investigator assigned as liaison contact from each law enforcement agency in the county. In the first quarter of the unit's operation 35 cases were selected for C.C.P. treatment. Dispositions were obtained during the first quarter on sixteen defendants with no dismissals or acquittals. The incarceration rate on the sixteen defendants was 100%.

Of the sixteen convictions, eight were obtained as the result of jury trials and eight were the result of guilty pleas. The Ventura authorities expressed some surprise at the fact that 50% of the dispositions were still obtained by guilty pleas, in spite of the unit's "no-plea bargaining stance". Data at the Center, however, indicates that this experience is not unique and that career criminal units will continue to obtain guilty pleas to top charges once they establish their credibility as being ready and able to take any and all cases to trial.

Building upon the Ventura experience, contacts were made with the office of the Honorable Christopher Bayley, Prosecuting Attorney of King County (Seattle), Washington. Since initial contacts were favorable, an on-site visit was made to the

Washington office by the Center's staff and again a tentative implementation plan was developed. (Subsequent to the conclusion of this grant term, a firm decision was made to implement a Seattle program without federal subsidies in mid-January, 1977.) Also during this grant term, as a result of technical assistance activities, commitments were obtained from the prosecuting attorneys of Palm Beach County, Florida, and Tarrant County, (Forth Worth), Texas to implement non-federally funded career criminal units. We believe that this non-federally funded replication concept, which was begun and proven through demonstration during the first grant term, and which will be greatly expanded during the second grant term, epitomizes the L.E.A.A. function and role. That is, through the provision of a relatively modest amount of federal funds to the Center, technical assistance services are generated which can lead to the creation of a far greater number of career criminal units than could ever be accomplished through direct funding subsidies of such units.

VII. REPORTS AND PUBLICATIONS

Although the prime thrust of the Center's activities has been the provision of individualized responses to specific technical assistance requests, several reports of interest to L.E.A.A. and Criminal Justice System officials were produced during the grant time.

As noted previously, the Center (as one of its grant objectives) produced an individualized case flow analysis on each of the 11 then-existing Career Criminal Programs. Each analysis analyzes the project's staffing, its selection criteria, and then demonstrates the processing of cases through its

Criminal Justice System, both prior to implementation of career criminal processing and thereafter. These reports were provided to L.E.A.A., to the MITRE Corporation for assisting it in the selection of the four evaluation sites, and they subsequently have been disseminated to district attorneys contacting the Center with reference to information on implementing a career criminal unit.

Also, published pursuant to grant objectives, was a nationwide digest of State and Federal Habitual Offender Statutes, coupled with leading court decisions in each jurisdiction validating or construing them. This digest contained the statutes (if present) for each of the 50 states and for the federal government. Aside from habitual offender statutes, the digest also covered selected Firearms Use Enhancement laws.

A "How To Do It Manual" detailing those steps necessary for a model Career Criminal Program including a checklist for all criminal justice agencies has also been compiled and completed pursuant to grant objectives and conditions.

The Center (also in fulfillment of grant objectives) published five editions of its newsletter, "The Verdict", each issue of which by the end of the grant term was being distributed to over 3,000 district attorneys and other interested law enforcement officials. The newsletter is specifically geared to the career criminal prosecution concept and contained legal articles of general interest, data analysis from program operations, strategic tips in program operations, articles by career criminal unit line prosecutors and media articles of general interest concerning individual career criminal units and the program generally.

A memorandum outlining the innovative methods employed by career criminal prosecuting attorneys' offices for inter-facing with law enforcement agencies was also produced. This memorandum suggested alternative methods for more fully integrating law enforcement agencies into the career criminal prosecution concept.

At L.E.A.A. request, a preliminary report was produced (including in-put from the Center's consultant, Prof. Dan Glaser of U.S.C.) outlining areas of possible Career Criminal Program impact on various correctional systems.

Various other summary statistical reports were prepared at the request of L.E.A.A.'s Office of Public Information which data performance reports formed the basis of articles in the National Observer and U.S. News & World Report.
