

# ANNUAL REPORT

69325

Fiscal  
Year  
1979

JUL 25 1980

## ACQUISITIONS

PREFACE

Statistics for this report were compiled primarily from data descriptive of inmates confined within the Kansas Correctional system on June 30, 1977, 1978, and 1979. Inmates upon whom profile data were not collected for inclusion within this report were those housed at the Dillon Unit at Larned State Hospital, those serving their time in absentia, those in contract work release programs, and those detained at the Kansas Reception and Diagnostic Center pursuant to the performance of a presentence evaluation.

With the exception of data elements employed to produce the statistics related to General Management Data, the data were collected via a mass effort by each facility. The coding of inmates currently confined at each facility was accomplished according to a set of written instructions. Each facility selected the staff who participated in the coding effort; a factor which could account for some variance of data among correctional facilities. As the instructional material and coding forms were delivered to the individual facilities, Department of Corrections personnel worked with the various staff members assigned to perform the institutional coding. Through this centralized coordination of the overall research effort, pertinent questions posed by facility staff members were answered in a manner which minimized variation in coding among the participating facilities.

As the individual coding sheets were returned by each correctional facility, they were hand edited prior to being keyed into the computer. Additionally, machine edits were performed, and errors found were corrected by central office staff via research of hard copies of records or, when necessary, by calls made to the individual facility staff members involved.

The data for FY 1979 were manipulated through the same computer programs employed in the prior year. With the development of a more comprehensive information system offering ready access to pertinent data via on line printers and displays, this is the last year such a mass coding effort will be required to develop a statistical report for the Kansas Department of Corrections. The hard work and excellent cooperation provided by facility staff toward the accomplishment of this coding effort was sincerely appreciated by those compiling the final statistical report.

### AN AGENCY-WIDE PERSPECTIVE

As enumerated in the Kansas Statutes Annotated, four major responsibilities devolve upon the Secretary of Corrections as basic functions of the Department. These basic functions are as follows:

1. Providing institutional care and correction for those adult felons committed to the care and custody of the Secretary of Corrections;
2. Administering a community corrections grant program to assist communities in developing alternative correctional services for certain juveniles and non-violent adult felony offenders;
3. Providing supervision of individuals granted parole by the Kansas Adult Authority and those adult felony parolees and probationers received through interstate compact;
4. Inspecting the city and county jails, and other local confinement facilities.

In carrying out these responsibilities, the Department of Corrections renders both short and long term protection to the public. Short term protection is provided by means of the supervision or incarceration of offenders. Long range protection is provided through the correction of the offender, in the hopes that he or she will not resort to unlawful activity after the period of supervision or term of confinement has been completed. Through the fulfillment of these duties, the Kansas Department of Corrections supports the court system and law enforcement agencies in the statewide operation of the Kansas criminal justice system.

The Secretary of Corrections exercises management of the correctional system through the following three divisions:

1. Division of Institutional Services
2. Division of Community Correctional Services
3. Division of Management Services

The Division of Institutional Services encompasses management of the Correctional Industries program and operation of a Diagnostic Center, four adult correctional institutions, and the Toronto Honor Camp. During Fiscal

year 1979, an average of 2,322 inmates was incarcerated within Kansas adult correctional institutions and work release centers.

Upon commitment to the care and custody of the Secretary of Corrections, each inmate is evaluated individually to examine the basis of his or her criminal behavior and to aid in the development of appropriate treatment and/or corrective programs best suited to the needs of the offender. Male offenders are evaluated at the Kansas State Reception and Diagnostic Center, located in Topeka, while female offenders are evaluated at the Kansas Correctional Institution for Women in Lansing. During the past fiscal year, approximately 1,400 offenders were committed to the custody of the Secretary of Corrections from the district courts. In the case of male offenders, transfer to one of three institutions is accomplished upon the completion of the evaluation process. Subsequent transfer to an honor camp or a work release center is made contingent upon the offenders' behavior and responsiveness to correctional treatment.

Information contained within the diagnostic report as may pertain to the physical, social, psychiatric, and psychological background and needs of the offender is taken into consideration at the initial classification of each inmate following assignment to an institution. Through the process of initial classification, programs of treatment involving education, vocational training, drug and alcohol therapy, counseling, and work assignment are developed to meet the individual needs of each inmate. Projections are made as to anticipated advances in custody, and the inmate is informed of all institutional expectations related to his or her program.

One of the most important aspects of the initial classification process is the assignment of each inmate to an appropriate residential unit. Upon assignment to a residential unit, the function of program review and evaluation devolves upon the unit team. Applied throughout all institutions within the Kansas Department of Corrections, the unit team concept provides a multi-disciplinary approach to caseload management. Through the inclusion of both the treatment and security input into overall individual program evaluation and development, unit teams provide the administration of each institution with sound recommendations for the development and enhancement of the overall

corrective effort.

Each individual inmate's correctional program is reviewed at least every 90 days throughout the offender's period of confinement. One of the major purposes of each 90-day review is the consideration of the inmate's conduct and adjustment within the institution, the quality and quantity of work performed by each inmate within his or her assigned detail, and the amount of individual progress made in such areas as education, vocational training, counseling, and/or other programs within which an individual inmate may be involved. Requests and/or recommendations for modification of custody level, resident assignment, etc., are considered at this time. Upon the completion of each 90-day review, the unit team forwards its recommendations to a program management committee composed of top level administrators within the institutions. The recommendations of each unit team for individual inmate program development are considered by the administration and approved or disapproved. Each inmate is provided a copy of the final document of each review, and a unit team counselor explains any and all program modifications which may have occurred. Through the review procedure, each unit team is afforded a timely and effective tool for the monitoring and evaluation of each inmate's progress within the correctional system.

Upon entry into the correctional system, each inmate is assigned a tentative parole eligibility date by the Kansas Adult Authority in concert with the recommendations of the Department of Corrections. Upon attainment of parole eligibility within the limits provided by law, each inmate is reviewed by the Adult Authority and considered for possible release.

The Division of the Community Correctional Services oversees the operation of two self-contained work release centers, the jail inspection program, administration of the community corrections grant program, and supervision of approximately 2,100 Kansas parolees and compact parolees/probationers on a state-wide basis. During the 1978 session, the Legislature amended existing law to transfer responsibility for supervision of felons placed on probation by the district courts. As a result of this statutory amendment, supervisory responsibility was transferred from the Department to the court system

effective July 1, 1979.

The Division of Management Services encompasses the functions of fiscal management, evaluation and records, management analysis, personnel, and staff development. The departmental program will be operated in fiscal year 1980 by approximately 1,170.5 equivalent full-time staff positions and approximately 78 contracted educational and/or vocational training program positions.

While not part of the department, other state agencies, such as the Kansas Adult Authority and the Corrections Ombudsman Board, work closely with both inmates and institutional staff. Legal services for inmates are provided by Legal Services for Prisoners, Inc. Employment referral and/or placement are provided through the State Job Service Centers of the Department of Human Resources.

## AN OVERVIEW OF GENERAL MANAGEMENT DATA CONTENTS

This section reflects data relative to commitment trends, institutional population levels, departmental staffing patterns, and the per capita cost of institutionalization and parole supervision. During Fiscal Year 1979, the average daily population continued to increase but at a lesser rate than that experienced during either Fiscal Year 1977 or 1978. For example, the increase in average daily population for FY 1979 over FY 1978 was 61 as compared to an increase of 193 inmates for FY 1978 over FY 1977. The factors influencing the change in average daily populations include a decline during Fiscal Year 1979 in the number of new admissions from the district courts, a slight but continued decline in the number of parole violators returned for institutionalization on "technical" violations of the conditions of parole, and the paroling out of larger numbers committed in prior years. While there was a decline in absolute numbers of new commitments from the district courts, a breakdown in percentage between those committed from ten specially selected counties and the balance of state remains essentially unchanged. Nevertheless, deviations occurred from county to county within those two groupings. For example, if the comparison were restricted to Sedgwick, Wyandotte, and Shawnee Counties, a 13% reduction in commitments over the three-year period would have occurred. Data are not available as to crime rates or court dispositions during FY 1979 from which to draw conclusions as to the reduction in new court commitments. Generally, it is believed that public discussions over prison conditions during the past three years have contributed towards an increased use of community resources for the less serious offender.

The resident inmate population of the Kansas Correctional System on June 30, 1979, included 2,233 males and 93 females. As referenced within the preface of this report, those inmates under care at the Dillon Unit of Larned State Hospital, persons sentenced to serve their effective sentences in absentia, inmates participating in contract work-release programs, and cases being evaluated at the Kansas Reception and Diagnostic Center in pre-sentence status were not represented in these populations. The larger urban areas of Sedgwick, Shawnee and Wyandotte Counties accounted for 52% of the male prison population on that

date. An analysis of the characteristics of that population will be made in a subsequent section of this report.

The cost of operating the Kansas Correctional System for service delivery in FY 1979 was \$22,063,140 for institutional services and \$1,519,967 for probation and parole supervision, an increase of \$2,474,724 or 11.7% for the combined services over FY 1978. In FY 1979 the per capita cost of care and confinement was \$9,530.51 annually or \$26.11 per day. Of the operating costs approximately 85% was expended for operation of four major confinement institutions, 10% for diagnostic services, and 5% for the Honor Camp and Work Release Programs. In total, approximately 63% of the operating expenditures was for personal services through 1170.5 authorized positions. Delivery of academic and vocational training programs and food accounted for the next largest expenditure within the operating budget at 9% each. An additional \$384,466 was expended in FY 1979 for improvements to correctional facilities.

### ANALYSIS OF INMATE CHARACTERISTICS

This section of the report reflects information relative to the characteristics of the inmate populations confined within correctional institutions on June 30, 1979, in comparison to the characteristics of the inmate populations on the same date in calendar years 1977 and 1978. This information will, therefore, reflect both changing trends within the population confined, as well as characteristics of an inmate population one would assume to be present on any given day. As with the average daily population, the number confined on June 30, 1979 over the same date of the two previous years continued to increase, but at a slower rate. The population confined on June 30, 1979 had, in fact, declined slightly from those confined at the close of the three previous months. That trend could be interpreted as a temporary phenomena, or a beginning period of a stabilized or declining population. As population levels are the result of a complex set of factors, including sentencing practices of the judges and releasing practices of the Kansas Adult Authority, no speculative judgment is made as to what the ultimate trend may be.

Of the male population confined on June 30, 1979, 54% had been committed for a crime against persons, 40% for crimes against property and 6% for other crimes. Those percentages would reflect no variance from the picture in 1978, but would represent a 5% increase in the proportionate number confined for crimes against persons on June 30, 1979 over the same date in 1977. Of the females confined on June 30, 1979, 46% had been committed for crimes against persons, 45% for crimes against property and 9% for other crimes. Unlike the male population, the proportionate number of females confined for offenses against persons on June 30, 1979 increased by 12% over the same period in 1978, accelerating the trend over the 3-year period. However, as to a record of previous felony conviction, the population comparisons for males show an increasing trend for those confined to have had a previous felony conviction, while the trend for females over the same 3-year period shows a decline in previous felony

convictions. On June 30, 1979, 52% of the same males confined had been convicted previously for a felony offense, while in contrast, 23% of the females confined had previous felony convictions. With respect to class of offense, no significant change occurred in relation to prior figures for either the male or female populations. A summary depicting offense classes and the percentage of male inmates confined on June 30, 1978 and 1979 for committing such offenses is as follows:

PERCENTAGE OF MALE INMATES INCARCERATED  
(Felony Class X Fiscal Year)

CLASS	FY 1978	FY 1979
A	7.7%	8.5%
B	23.4%	25.2%
C	19.8%	18.5%
D	38.6%	39.2%
E	10.5%	8.6%

The largest percentage of males sentenced for crimes against persons had been convicted of robbery, while homicide ranked highest for females convicted of crimes in that particular offense class. With respect to property crimes, burglary accounted for the largest percentage of offenses committed by males, and the largest percentage of property crimes committed by females was equally divided among larceny, forgery, and "other" property crimes. No significant change has occurred in this trend over the past two years. The respective percentages for each type of offense against persons committed by males over the past two fiscal years is presented as follows:

PERCENTAGE OF MALE INMATES INCARCERATED  
(Type of Offense X Fiscal Year)

TYPE OF OFFENSE	FY 1978	FY 1979
Homicide	12.6%	13.2%
Kidnapping	4.3%	4.9%
Sexual Assault	5.9%	5.1%
Robbery	22.7%	21.4%
Assault	6.6%	7.0%
Other	2.0%	2.5%

A further contrast between the male and female populations would indicate that minorities represented 38.9% of the males confined on June 30, 1979 and 48.4% of the females confined on that same date. Of the male population, 45.2% had been incarcerated for less than one year, while 63.4% of the females had been similarly incarcerated. No significant difference existed between the two populations as to age. The average age of the male population was 27 years; the average age of the female population was 28 years. Of the male population, 16.7% had served time in another state on a prior occasion, while only 3.2% of the females had previously served time in another state. The repetition of offenses involving property appeared to be the most common within both populations. Of those inmates who were reincarcerated as repeat offenders, approximately 61% had committed their current offense within the first 24 months following release from incarceration.

Of the male population confined on June 30, 1979, 43.8% was confined at the Kansas State Penitentiary; 39.6% was confined at the Kansas State Industrial Reformatory, 6.8% was confined at the Kansas Correctional-Vocational Training Center; and 9.8% was confined at either the Kansas Reception and Diagnostic Center, the Honor Camp, or within Work-Release Centers. The place of confinement for each offender had been selected on the basis of one or more of the following factors: age, type of offense committed, extent of criminal career, and the individual's real or anticipated adjustment to confinement. In general, those confined at the Kansas State Penitentiary were generally older, had a longer involvement in criminal activity, and had been convicted of more serious offenses. For example, of those confined at the Kansas State Penitentiary, 70% had been convicted of a felony offense on a prior occasion and 63% had been previously incarcerated for a felony offense. In comparison, those confined at the Kansas State Industrial Reformatory were more youthful offenders with less extensive criminal records. As a case in point, only 33% of the Reformatory population had been convicted of a felony offense on a previous occasion. Those confined at the Kansas Correctional-Vocational Training Center were

youthful individuals, without prior histories of incarceration, who were in need of extensive vocational training and determined to be minimum security risks.

Although the preceding narrative analysis of inmate characteristics provides descriptive assessments of current population trends, tabular data presented on pages 21 through 32 will provide the reader with specific information on the various male and female populations as contained within the major insitutions of the Department of Corrections on June 30, 1979.

A&T		-		<u>50****</u>
TOTAL		897		1043

\*Since the institution was originally constructed approximately 41 cells have been converted to showers, latrines, office space for staff, etc.

\*\*Fifty cells are reserved for housing of new court commitments prior to transferring them to KRDC for evaluation. Maximum cell utilization is restricted because of the composition of the population and the need to maintain available cells for housing of new court commitments, etc.

\*\*\*Top two tiers have 16 large cells each; to provide adequate space, not more than four inmates should be assigned to each cell. (Approximately 48 square feet per person).

\*\*\*\*Based on past experience, it is assumed that fifty inmates would be housed in A & T on any given day.

KANSAS DEPARTMENT OF CORRECTIONS

Cell Capacity - Kansas State Industrial Reformatory  
As of June 30, 1979

<u>Cellhouse</u>	<u>No. of Tiers</u>	<u>No. Cells*</u>	<u>Cell Size</u>	<u>Capacity</u>

D	4	77****	18'6" x 10'4"	308
E		<u>0*****</u>		<u>80</u>
TOTAL		612		923

\*Since the institution was originally constructed approximately 45 cells have been converted to showers, latrines, office space for counseling staff, etc.

\*\*Twenty-three cells on the entry level are utilized as disciplinary segregation cells. The remaining cells are utilized for protective custody, medical segregation, and for general population inmates. Maximum cell utilization is restricted because of the composition of the population and the need to maintain available cells for housing of persons in segregation.

\*\*\*25 Cells on the entry level are utilized for segregation of new court commitments prior to transfer to KRDC for evaluation.

\*\*\*\*All cells are large cells, to provide reasonable space not more than four men should be assigned to a cell (Approximately 47 square feet per person).

\*\*\*\*\*This is a newly remodeled area providing a dormitory setting for select new court commitments on the second floor to the rear of "B" cellhouse. The area was completed in January 1978, and provides approximately 50 square feet per person.
