Foreword

The Issues of psychosocial drug use and abuse have generated many volumes analyzing the "problem" and suggesting "solutions." Research has been conducted in many disciplines and from many different points of view. The need to bring together and make accessible the results of these research investigations is becoming increasingly important. The Research Issues Series is intended to aid investigators by collecting, summarizing, and disseminating this large and disparate body of literature. The focus of this series is on critical problems in the field. The topic of each volume is chosen because it represents a challenging issue of current interest to the research community. As additional issues are identified, relevant research will be published as part of the series.

Many of the volumes in the series are reference summaries of major empirical research and theoretical studies of the last fifteen years. These summaries are compiled to provide the reader with the purpose, methodology, findings, and conclusions of the studies in given topic areas. Other volumes are original resource handbooks designed to assist drug researchers. These resource works vary considerably in their topics and contents, but each addresses virtually unexplored areas which have received little attention from the research world.

Introduction

OVERVIEW

This Guide to the Drug Research Literature is designed to serve the diverse information needs of the audience of drug researchers. It can be used both as a cumulative index to the 27 volumes of the NIDA Research Issues Series and as a general guide to some of the most significant writings in the field. Special care has been taken to make the Guide an independent information resource. It contains over 1,300 indexed references, the great majority of which are to literature that has been abstracted in the 17 Reference Volumes in the series. These lengthy abstracts summarize in detail the purpose, methodology, findings, and conclusions of each study. The literature largely consists of empirical research studies published in English since 1960, as well as some significant theoretical discussions and literature reviews. The Guide also contains references to the data collection instruments included in the Drug Abuse Instrument Handbook (volume 12) and to the specially prepared original discussions in the other Resource Handbooks in the series. These Resource Handbooks vary considerably in their topics and contents, but each addresses virtually unexplored areas which have received little attention from the research world.

A full description of the contents of the 27 volumes of the series is found on the back cover of this volume. The main topics covered in relation to drug use are employment, sex, attitudes and attitude change, family and peer influences, pregnancy, death, addict lifestyles, adolescent drug use, personality and psychological variables, criminal behavior, the criminal justice system and law enforcement, driving, minority drug use, international drug use, cocaine and amphetamine use, research designs and aides, and drug history. This extensive coverage of topics and materials should make this Guide an invaluable reference tool for all persons interested in drug use.

The Guide has a main document listing section and six divided indexes:

1. author index
2. drug index
3. location index
4. methodology index
5. sample index
6. subject index

The main listing section contains the indexed literature citations listed sequentially by control numbers. Sample main listings for a journal article and a data collection instrument are provided in the following exhibit.

SAMPLE DOCUMENT ENTRIES

Journal Article

Instrument

Each listing includes a full bibliographic citation and a reference to the Research Issues Series (RIS) volume and page where that document is located. Generally, documents are assigned sequential control numbers in the order in which they appear in the series, beginning with the first document abstracted in volume 1, Drugs and Employment. Thus the studies that appear in the same volume and deal with the same topic tend to be grouped together. When an article has been included in more than one volume, it is listed either with the first volume in which it appears or with the volume which contains the most complete abstract. In a few instances, original writings that appear in one volume are also abstracted in another volume; these are entered with the volume where the complete text occurs.

Under the citations, index terms are grouped into fields corresponding to the divided indexes which follow the main listing section; terms which are preceded by an asterisk (*) are listed in these separate indexes. In the indexes themselves, under each term is listed the titles and main listing control numbers of all relevant documents. At times in a main listing a particular category or field will be missing; this is because pertinent information is not given within the document or the field is not applicable. For instance, a literature review would rarely require a geographic locator unless the review deals with drug use in a particular area. A description of the indexing procedures and the scope of each index is provided below.

As a further aide for users, a complete list of all the drug, sample, subject, and methodology terms which were used to index the literature, arranged alphabetically in fields, has been included following this Introduction. A partial list of major journals (and their publishers) from which studies have been abstracted has also been included. Although this list is not exhaustive, it provides a guide to most of the journals containing drug research literature.

INDEXING PROCEDURES

In the indexing of the documents, an effort has been made to select terms which will provide users with a clear and complete understanding of the purpose and scope of the document so that they might better evaluate its relevance to their interests. To assist in this, a system of weighted terms has been employed. Terms without asterisks (no *) are general descriptors which provide information about a document's subject matter but were judged inappropriate for indexing and inclusion in the divided indexes. For example, the sample terms "whites" and "males" are used only as descriptors in the main listings because too many studies deal with these groups to include them in the sample index. On the other hand, "blacks" and "females" are asterisked index terms because the literature dealing with these samples is not as extensive and is of critical importance to the field. An attempt also has been made to select the single most specific terms possible from an established authority list. However, users should check under both specific and general terms relevant to a topic of interest as well as under variant terms. The complete list of drug, sample, subject, and location terms supplied following this Introduction should assist users in identifying relevant terms.

DIVIDED INDEXES

The six divided indexes (authors, drugs, samples, subjects, locations, and methodology) list alphabetically all the asterisked index terms from the main listing section. Under each term appear the document title and control numbers. The control numbers direct the user to the main listing section which contains the full bibliographic citation and description of the document. The titles of the documents have been provided to assist users in determining the relevance of a study without examining the full document listing. A title with initial capital letters is a monograph; if only the first word is capitalized, it is a journal article.

Subject Index. Includes all terms describing the subjects discussed in a document which are not covered by any of the other indexes.

Author Index. Includes all the authors listed alphabetically by last name and first initial. If more than five authors contributed to a work, only the first author is listed, followed by "et al." If a listing refers to a chapter in a book and the author's last name is not repeated before the book title, he or she may be assumed to be the author or editor of the entire book.

Drug Index. Includes the general and specific names of drugs discussed in each study. Whenever possible, drug terms have been standardized according to the taxonomy utilized in the Glossary of Drug Research Terminology (RIS volume 26). However, this was not always possible because of the idiosyncracies of the drug names used by authros. The user therefore should examine all possible terms by which a drug of interest might be indexed. If a document deals with a great many drugs, it has been indexed as "multidrug"; if it discusses drug use without specifying a particular drug, it is indexed as "general drug use." If one specific drug is treated far more extensively than others, only the major drug is indexed and other drugs are listed as descriptors (non-asterisked). Two specialized volumes dealing with drug themes in fiction and science fiction posed unique indexing problems as many of the drugs were fictitious and the fiction volume also had its own indexing system which classified drugs in terms of their functions or effects. Eight classifications were used: euphorics, intelligence enhancers, mind controllers, mind expanders, mind injureres, panaceas, reality testers, and sensation enhancers. It was decided not to include fictitious drugs in the index, but we did preserve the fiction volume's classification scheme as descriptors.

Sample Index. Includes terms which describe the characteristics of the people who participated in the research sample or who were the focus of a theoretical exposition or literature review. As discussed above, many sample terms such as "males" and "whites" are included as descriptors rather than index terms and are not asterisked. If a study includes both blacks and whites, or males and females, but does not draw any conclusions as to the similarities or differences between them, both terms are listed as descriptors and not as index terms. Numbers which follow sample terms in parentheses provide information on the actual sample size.

Location Index. Includes all the geographical areas in which drug research took place, or areas that are discussed in the documents. Terms are entered alphabetically in descending geographic order; that is, "California" is followed by "California, Los Angeles" and "California, San Francisco."

Methodology Index. Includes the type of methodology utilized in the research, or a description of the document type or classification. Also includes all instruments or other investigative devices which have been employed in the research. Some of the document listings refer to instruments which appear in volume 12, Drug Abuse Instrument Handbook. The names of these instruments are listed twice, once as the main listing title and again in the methodology index. Research strategies and designs (such as factor analysis, longitudinal research) discussed in the literature are indexed in the subject index. The main document classifications utilized in this index are as follows:

literature review: A review of what has been written about a topic and what can be concluded from previous writings.

theoretical/critical: a general discussion of a theory, hypothesis, or the results of other studies.

econometric: a form of statistical analysis focused on the economic variables involved in drug use and control.

secondary analysis: an analysis of existing data already collected and compiled by others and not the product of original investigations.

ethnography: the study of drug users in their natural environment through participant observation or personal interaction.

history: a study of drug use in the past.

case study: a study of one person, or more than one person studied independently, seeking to collect as much data as possible on each subject (a comprehensive description) in order to understand that single, idiosyncratic case.

clinical observation: a study based on a psychiatric evaluation of patients based on impressions as opposed to administered tests.

descriptive: a general description of some aspect of drug use, treatment, and control, for example, a special program.

descriptive survey: seeks to make simple descriptive assertions about some population on the basis of a survey or to discover the distribution of certain traits or attributes. The focus is not why the observed characteristics exist but merely what the distribution is.

longitudinal: a survey over time; the same variable is investigated on two or more occasions to see if there is a change in the population.

retrospective: a survey which depends on respondents' recall of pertinent experiences in the past. The data may be longitudinal in that it deals with happenings over time, but the data collection itself is post-facto.

correlational: a study which examines the relationship of drug use with some other variable or factor (e.g., religion, age), seeking not just to report on different characteristics but to examine the relationship.

comparative: a study which examines the relationship between distinctly different drug using groups (e.g., males vs. females; users vs. nonusers, etc.).

THE RESEARCH ISSUES SERIES

DRUGS AND EMPLOYMENT. Attitudes toward drug use by employers and employees; the effects of drug use on work performance, hiring and firing practices; employer rehabilitation programs. Specific studies on drug use in medicine, sports, and aviation. 31 abstracts. Stock No. 017-024-00424-3 (\$1.80)

DRUGS AND SEX. The effects of drugs on sexual behavior, correlations and relationships among a variety of populations. Arranged by drug type: multi-drug, marihuana, amphetamines, LSD, heroin and methadone. 24 abstracts. Stock No. 017-024-00425-1 (\$1.45)

DRUGS AND ATTITUDE CHANGE. What people believe and how they learn about drugs. Users' and nonusers' attitudes toward drugs; sources of drug information; the role of the media, drug education programs, and communications, as they influence attitudes and attitude change. 44 abstracts. Stock No. 017-024-00426-0 (\$2.25)

DRUGS AND FAMILY/PEER INFLUENCE. Classification of peer group types; comparison of drug-using and other social "deviant" behavior among youth; prediction of drug use, particularly marihuana, and the family dynamics of heroin users. 36 abstracts. Stock No. 017-024-00427-8 (\$2.10)

DRUGS AND PREGNANCY. LSD: literature reviews, chromosome and teratogenesis studies. Heroin: the heroin-addicted mother-child dyad and neonatal withdrawal management. Overviews on genetics and mutational hazards. 52 abstracts. Stock No. 017-024-00428-6 (\$2.70)

DRUGS AND DEATH. Epidemiological studies of drug-related deaths, with an emphasis on opiates; methods of classifying and reporting drug-related deaths; and the relationship between drugs, suicide, and homicide. 49 abstracts. Stock No. 017-024-00429-4 (\$2.25)

DRUGS AND ADDICT LIFESTYLES. Lifestyle and motivation of the committed heroin user. Descriptive and comparative studies on the incidence, demographics, and characteristics of heroin-using populations; citations to books by and about addicts. 83 abstracts. Stock No. 017-024-00430-8 (\$3.30)

A COCAINE BIBLIOGRAPHY — NONANNOTATED. All aspects of cocaine use, including coca. Covers worldwide literature; research reports, journal articles, books, news sources and media. Arranged by decade, language, and subject. 1800 citations. Stock No. 017-024-00431-6 (\$2.00)

DRUG THEMES IN SCIENCE FICTION. By Robert Silverberg. Explores unreality as an indicator of reality; selected science fiction stories about drugs of the future and their impact on society. Includes an annotated bibliography for 1900-1973. Stock No. 017-024-00432-4 (\$1.20)

DRUG THEMES IN FICTION. By Digby Diehl. Surveys selected works of fiction with drug-related thematic content which reflect popular American attitudes toward drugs. Includes an annotated bibliography. Stock No. 017-024-00433-2 (\$1.05)

PREDICTING ADOLESCENT DRUG ABUSE. The most recent thinking on the problems and intricacies surrounding the prospect of predicting drug-abusing behaviors, particularly among adolescents. Discusses: general conceptual issues, nosological and clinical approaches, methodological strategies; intrapersonal, behavioral, and interpersonal variables and correlates; longitudinal design; and developmental models. 18 articles; 361 pp. Stock No. 017-024-00496-1 (\$4.90)

DRUG ABUSE INSTRUMENT HANDBOOK. A sourcebook containing over 2,000 representative items from 40 instruments used in drug abuse research. Includes demographic, interpersonal, intrapersonal, and drug items, plus detailed summaries describing the instruments utilized. A guide to obtaining and developing instruments. Stock No. 017-024-00533-9 (\$4.65)

DATA ANALYSIS STRATEGIES AND DESIGNS FOR SUBSTANCE ABUSE RESEARCH. The latest data analysis and methodological strategies and their application in psychosocial substance abuse research. Includes: Automatic Interaction Detection, Actuarial Prediction, Cluster and Typological Analysis: Single-Organism Designs: Longitudinal Designs: Path Analysis: Factor Analysis: Multiple Regression and Correlation Analysis: Multivariate Analysis of Variance: and Discriminant Analysis. Written by noted authorities in each field. 10 articles. Stock No. 017-024-00562-2 (\$3.00)

DRUGS AND PERSONALITY. Personality correlates and predictors of non-opiate drug use, particularly among adolescents. Discusses: psychological symptoms, locus of control, self-esteem, and the use of psychological tests, particularly the Minnesota Multiphasic Personality Inventory. 59 abstracts. Stock No. 017-024-00531-2 (\$2.00)

COCAINE — SUMMARIES OF PSYCHOSOCIAL RESEARCH. Theories and research on human cocaine use from the turn of the century to the present in North America, South America and Europe. Also incidence studies noting the extent of cocaine use in contemporary society. 69 abstracts. Stock No. 017-024-00564-9 (\$2.10)

DRUGS AND CRIME. The relationship of drug use and concomitant criminal behavior. Divided into sections on reviews and theories, non-opiate drug use, the opiates, delinquency, the female drug user, the impact of treatment modalities, and the economics of drugs and crime. 108 abstracts. Stock No. 017-024-00556-8 (\$3.45)

DRUG USERS AND THE CRIMINAL JUSTICE SYSTEM. Research on drug-related offenses, and the enforcement of drug laws; the effect of the criminal justice system on the drug user. Divided into two sections: (1) research on drug laws — their effectiveness and their enforcement; (2) research on the use of compulsion in the treatment of addicts. 66 abstracts. Stock No. 017-024-00629-7 (\$3.00)

DRUGS AND PSYCHOPATHOLOGY. The relationship of drug use to severe psychological disturbance and antisocial behavior. A companion volume to *Drugs and Personality*, this volume includes research on opiates and nonopiates in all age groups. Stock No. 017-024-00630-1 (\$3.00)

DRUG USERS AND DRIVING BEHAVIORS. The use of nonmedical drugs and their effects on driving. Includes research on the effects of drug use on the physical functions associated with driving, incidence studies of driving arrests, and simulated driving studies. 76 abstracts. Stock No. 017-024-00576-2 (\$1.70)

DRUGS AND MINORITIES. Research on the use of drugs among racial and ethnic minorities, particularly blacks; Mexican Americans, Puerto Ricans, and other Spanish surnamed Americans; Asian and Native Americans. Includes studies dealing with minority populations as well as with the racial/ethnic patterns of drug use among general populations. 93 abstracts. Stock No. 017-024-00745-5 (\$4.00)

RESEARCH ISSUES UPDATE, 1978. New readings on 13 topics previously covered by the series: sex, pregnancy, attitude change, family/peer influences, employment, crime, criminal justice, cocaine, personality, psychopathology, and driving. Organized by topical area. 135 abstracts. Stock No. 017-024-00876-1 (\$5.25)

INTERNATIONAL DRUG USE. Research on drug use in 35 foreign countries with a focus on patterns of use and topics covered by the series. Includes an introductory review and studies on the United Kingdom, Scandinavia, Africa, the near East, Asia, and Latin America. 95 abstracts. Stock No. 017-024-00874-5 (\$4.20)

PERSPECTIVES ON THE HISTORY OF PSYCHOACTIVE SUBSTANCE USE. Lengthy summaries of 35 significant major events in the history of psychoactive substance use since the Renaissance in the U.S., Europe, and Asia. Substances covered are alcohol, coffee, tobacco, ether, cocaine, amphetamine, cannabis, opium and the opiates. Each perspective includes an introductory review, chronology, and summaries of previous research. 280 pp. Stock No. 017-024-00879-6 (\$5.25)

USE AND ABUSE OF AMPHETAMINE AND ITS SUBSTITUTES. Theories and research on human amphetamine use in the U.S. and other countries. Divided into sections on history; theories; perceptual, cognitive, and psychomotor effects; medical uses; use patterns, psychiatric sequelae, and user characteristics; amphetamine substitutes; adverse effects, toxicity, and treatment; future trends; and legislation. Each section is preceded by an overview. 150 abstracts.

GLOSSARY OF DRUG RESEARCH TERMINOLOGY. Definitions for over 1,000 terms found in the drug research literature, selected on the basis of frequency, importance, and ambiguous meaning or usage. Includes psychosocial, legal/criminal justice, biomedical, and statistical/methodological terms, as well as drug names and terms. Excludes drug slang.

GUIDE TO THE DRUG RESEARCH LITERATURE. A cumulative index to all literature included in the series. Includes fully indexed citations to each study with a reference to the volume in which it appears or is summarized. Separate indexes are provided for authors, drugs, sample characteristics, geographical locations, methodologies and instruments, and general subject terms.
