AMERICAN MEDICAL ASSOCIATION STANDARDS

FOR HEALTH SERVICES IN JAILS

Preface

A. INTRODUCTION

The standards in this document are the result of over five years of deliberations by the AMA's Advisory Committee to Improve Medical Care and Health Services in Correctional Institutions and its successor, the Advisory Group on Accreditation; several state medical society project advisory committees; three special national task forces and AMA staff. Equally important, several hundred sheriffs, facility administrators and health care providers in jails across the country contributed substantially to the standards. The development, printing, distribution and revision of Standards for Health Services in Jails were made possible through grants from the Law Enforcement Assistance Administration to the American Medical Association.

The previous editions of Standards have been approved by the National Sheriffs' Association, the American Correctional Association, the Commission on Accreditation for Corrections and the AMA's House of Delegates. In addition, several state jail inspection/regulatory bodies have adopted the basic standards and various court decisions have incorporated aspects of the AMA's Standards document.

Many jails have been or are under legal action for failure to provide adequate health care. A number of court decisions involving pre-trial detainees have stressed that detainees must be accorded all of the rights of a citizen and deprived only of such liberty as necessary to ensure their presence at trial. Additionally, the courts have stated that sentenced individuals should not be denied adequate medical care on the grounds that such deprivation constitutes "cruel and unusual punishment" prohibited by the Eighth Amendment to the Constitution of the United States.

The AMA's standards reflect the viewpoint of organized medicine regarding its definition of adequate medical care and health services for correctional institutions. They are considered minimal. The basic philosophy underlying these standards is that the health care provided in institutions should be equivalent to that available in the community and subject to the same regulations.

Standards are acknowledged criteria for qualitative and/or quantitative measurement of health care delivery systems. The AMA's standards form the basis of a program to accredit jail health care

This project was supported by Grant Number 79-MU-AX-0008 awarded by the Law Enforcement Assistance Administration, United States Department of Justice. Points of view or opinions stated in this publication are those of the American Medical Association and do not necessarily represent the official position of the United States Department of Justice.

systems. As of July 1981, there were 14 facilities which were AMA accredited under earlier editions of the Standards. Increasingly, experience has shown that the same AMA standards have been met by jails which range from the smallest local facilities to the largest metropolitan jails.

Accreditation means professional and public recognition of good performance. Accreditation through standards implementation is the foundation for professionalization of and public support for criminal justice medicine. As demonstrated in the AMA's Jail Program, implementation of these standards can result in (1) increased efficiency of health care delivery, (2) greater cost effectiveness and (3) better overall health protection for inmates, staff and the community.

I. CONTENTS

These standards address the following aspects of medical, psychiatric and dental care and overall health services: (1) Administrative Matters, (2) Personnel Matters, (3) Care and Treatment, (4) Pharmaceuticals, (5) Health Records and (6) Medical Legal Issues. Experience dictates that a safe, sanitary and humane environment which meets sanitation, safety and health codes is a prerequisite for a good health care program. Since environmental issues are addressed in detail in other national standards, they are not included in this document as a special section.

The health care of women inmates is also not addressed in a special section. For the most part, the basic health care needs of incarcerated individuals will be the same regardless of sex. Where differences exist on the basis of sex, the special needs of women are identified within the standards themselves. The AMA's standards are meant to apply equally to male and female inmates. A facility cannot meet compliance if the required services are available to only one sex and not the other.

The medical program must function as part of the overall institutional program. The implementation of standards calls for close cooperation between the medical staff, other health professionals, correctional personnel and the facility's administration. Facility administrators and clinicians will find the standards helpful in providing services to inmates. The standards also provide information useful to administrators in program planning and budgeting. The Standards document will also assist clinicians to establish priorities, determine services, allocate resources and train staff.

This edition of the AMA's Jail Standards includes detailed chemical dependency and psychiatric standards. These additions are extremely important as national criminal justice service agencies universally report that a major problem they must address is the detention of mentally ill and chemically dependent people in jails.

The AMA's National Advisory Committee to Improve Medical Care and Health Services in Correctional Institutions; its successor, the AMA Advisory Group on Accreditation, and the AMA's Ad Hoc Task Force on Psychiatric Standards for Jails and Prisons strongly support the policy adopted by some law enforcement administrators stating that their officers will not place charges against suspected mentally ill persons for the sole purpose of detention. Admission to appropriate health care facilities and/or the provision of services in the community in lieu of jail detention should be sought for such persons.

However, it is also recognized that a number of serious offenders jailed for cause may be mentally ill and that psychiatric problems can develop during incarceration. Thus, the recommended approach for health professionals is to develop appropriate medical services for the seriously mentally ill both in and out of correctional facilities.

The standards contained herein represent an outline of a program necessary to properly detect, treat and refer psychiatric patients in correctional facilities. Psychiatric services are part of the medical program with the treatment of psychiatric illness being the goal.

Implementation of these standards assumes a multidisciplinary model of health care delivery. With respect to psychiatric services, the primary responsibility remains with the physician. Other health care staff (such as nurses, social workers and psychologists) can provide psychiatric services under a physician's supervision.

The standards place responsibility on medical staff to consult with non-medical colleagues in the management of inmates with behavior problems. Medical staff are called upon to provide advocacy services for the alcoholic, the drug abuser and the mentally retarded individual. Standards help to promote the proper diagnosis and referral of these inmates to services appropriate to their needs.

Reliance on community resources for manpower and facilities is the only way that most correctional facilities can provide special services such as detoxification and psychiatric care. Correctional facilities function best as part of the human services system of the surrounding community. The emphasis of the standards is to bring medical resources into the facility for routine care and transfer out inmates with extraordinary needs.

Studies show that the most frequent cause of death in jails is suicide--frequently alcohol and/or drug related--followed by withdrawal from alcohol and drugs independent of medical supervision. These standards address not only the need for adequate professional screening, referral and treatment of inmates with psychiatric and chemical dependency problems, but also the need for training correctional staff in these areas, which can impact heavily on the effectiveness of the health care delivery system.

Finally, various health providers report that a number of inmates on sick call come there because of social problems which have not been addressed. Some jails employ social workers/counselors to handle these problems. Others use volunteers who are properly screened, oriented/trained and supervised. Please refer to the AMA's monograph "The Use of Volunteers in Jails," for guidance concerning the development of such a program.

C. HOW TO USE THIS DOCUMENT

There are fifty-six standards included in this document. They are arranged numerically within specific topic areas (e.g., Administrative, Personnel, etc.), with the title of each preceding the standard. Essential standards are listed first in each topic area, followed by the Important standards. For accreditation, all applicable essential standards must be met. In addition, 70% of the applicable important standards must be achieved for one year accreditation and 85% for two years.

Following each standard is a Discussion. The Discussion elaborates on the conceptual basis of the standard and in some instances, identifies alternative approaches to compliance. In addition, definitions of key terms will be found in the Discussion sections. The first time a key term appears, it is underlined in the standard itself and if not defined in the standard, it is defined in the Discussion. Further, a Glossary of terms is provided in the Appendix and key words are listed alphabetically in the Index.

A. ADMINISTRATIVE

Various aspects of management of the health care delivery system in a jail, including processes and resources, are addressed. The method of formalizing the health care system is outlined. However, the standards do not dictate organizational structure.

1. ESSENTIAL STANDARDS

101 - Responsible Health Authority

1 The facility has a designated health authority with responsi-
2 bility for health care services pursuant to a written agree-
3 ment, contract or job description. The health authority may
4 be a physician, health administrator or agency. When this
5 authority is other than a physician, final medical judgments
6 rest with a single designated responsible physician licensed
7 in the state.

8
9 Discussion: Health care is the sum of all action
10 taken, preventive and therapeutic, to provide for
11 the physical and mental well-being of a population.
12 Health care, among other aspects, includes medical
13 and dental services, personal hygiene, dietary and
14 food services, and environmental conditions.

15
16 The health authority's responsibility includes ar-
17 ranging for all levels of health care and assuring
18 quality and accessibility of all health services
19 provided to inmates. It may be necessary for the
20 facility to enter into written agreements with out-
21 side providers and facilities in order to meet all
22 levels of care.

23
24 A responsible physician is required in all instances;
25 he or she makes the final medical judgments. In most
26 situations the responsible physician will be the
27 health authority. In many instances the responsible
28 physician also provides primary care.

29
30 The health administrator is a person who by educa-
31 tion (e.g., RN, MPH, MHA and related disciplines) is
32 capable of assuming responsibilities for arranging
33 for all levels of health care and assuring quality
34 and accessibility of all services provided to inmates.

35
36 Regarding the use of allied health personnel, please
37 refer to the AMA monograph on "The Use of Allied
38 Health Personnel in Jails." Also, new health care
39 providers may find helpful information in the AMA
40 monograph "Orienting Health Providers to the Jail
41 Culture."

42
43
44 102 - Medical Autonomy

45
46 Matters of medical (including psychiatric) and dental judgment
47 are the sole province of the responsible physician and dentist

1 respectively; however, security regulations applicable to
2 facility personnel also apply to health personnel.

3
4 Discussion: The provision of health care is a joint
5 effort of administrators and health care providers and
6 can be achieved only through mutual trust and coopera-
7 tion. The health authority arranges for the avail-
8 ability of health care services; the official respon-
9 sible for the facility provides the administrative
10 support for accessibility of health services to in-
11 mates.

12
13 Health personnel have been called upon to provide non-
14 medical services to inmates: "talking to trouble-
15 makers," providing special housing for homosexuals or
16 scapegoats in the infirmary, medicating unruly inmates,
17 conducting body cavity searches for contraband and
18 taking blood alcohol samples for the possible purpose
19 of prosecution. These are examples of inappropriate
20 use of medical personnel. Regarding body cavity
21 searches, the AMA House of Delegates established
22 policy on this matter in July, 1980. In summary, it
23 declared that:

- 24
25 1. Searches of body orifices conducted for
26 security reasons should generally be per-
27 formed by correctional personnel with
28 special training.
- 29
30 2. Where laws or agency regulations require
31 body cavity searches to be conducted by
32 medical personnel, they should be performed
33 by health care personnel other than those
34 providing care to inmates.
- 35
36 3. Where searches of body orifices to discover
37 contraband are conducted by non-medical
38 personnel, the following principles should
39 be observed:
- 40
41 a. The persons conducting these
42 searches should receive training
43 from a physician or other quali-
44 fied health care provider regard-
45 ing how to probe body cavities
46 so that neither injuries to the
47 tissue nor infections from un-
48 sanitary conditions result;
- 49
50 b. Searches of body orifices should
51 not be performed with the use of
52 instruments; and
- 53
54 c. The search should be conducted in
55 privacy by a person of the same
56 sex as the inmate.

103 - Administrative Meetings and Reports

1 Health services (including psychiatric) are discussed at least
2 quarterly at documented administrative meetings between the
3 health authority and the official legally responsible for the
4 facility or their designees.

5
6 There is, minimally, an annual statistical report outlining
7 the types of health care rendered and their frequency.

8
9 Discussion: Administrative meetings held at least
10 quarterly are essential for successful programs in
11 any field. Problems are identified and solutions
12 sought. Health care staff are also encouraged to
13 attend other facility staff meetings to promote a
14 good working relationship among all staff.

15
16 Regular staff meetings which involve the health
17 authority and the official legally responsible
18 for the facility and include discussions of
19 health care services, meet compliance if docu-
20 mentation exists.

21
22 If administrative and regular staff meetings are
23 held but neither is documented, the health authority
24 needs to submit a quarterly report to the facility
25 administrator which includes: the effectiveness
26 of the health care system, description of any health
27 environment factors which need improvement, changes
28 effected since the last reporting period, and if
29 necessary, recommended corrective actions. Health
30 environment factors which are of the greatest con-
31 cern are those in which there are life-threatening
32 situations, i.e., a high incidence of suicides and/or
33 physical assaults and severe overcrowding which af-
34 fects inmates' physical and mental health.

35
36 The annual statistical report should indicate the
37 number of inmates receiving health services by
38 category of care, as well as other pertinent in-
39 formation (e.g., operative procedures, referrals to
40 specialists, ambulance services, etc.).

41
42 Reports done more frequently than quarterly or
43 annually satisfy compliance.

44
45
46 104 - Policies and Procedures

47
48 There is a manual of written policies and defined procedures
49 approved by the health authority which includes the following:

50
51 Liaison Staff (106)
52 Peer Review (107)
53 Public Advisory Committee (108)

1 Decision-Making -- Special Problem Patients (109)
2 Special Handling: Patients With Acute Illnesses (110)
3 Monitoring of Services/Internal Quality Assurance (111)
4 Access to Diagnostic Services (113)
5 Notification of Next of Kin (114)
6 Postmortem Examination (115)
7 Disaster Plan (116)
8 Basic Training of Correctional Officers/Jailers (120)
9 Medication Administration Training (121)
10 Inmate Workers (122)
11 Food Service Workers - Health and Hygiene Requirements (123)
12 Utilization of Volunteers (124)
13 Emergency Services (125)
14 Receiving Screening (126)
15 Detoxification (127)
16 Access to Treatment (128)
17 Daily Triaging of Complaints (129)
18 Sick Call (130)
19 Health Appraisal (131)
20 Skilled Nursing/Infirmary Care (133)
21 Use of Restraints (136)
22 Special Medical Program (137)
23 Standing Orders (138)
24 Continuity of Care (139)
25 Health Evaluation - Inmates in Segregation (140)
26 Health Promotion and Disease Prevention (141)
27 Chemically Dependent Inmates (142)
28 Pregnant Inmates (143)
29 Dental Care (144)
30 Delousing (145)
31 Exercising (146)
32 Personal Hygiene (147)
33 Prostheses (148)
34 Food Service (149)
35 Management of Pharmaceuticals (150)
36 Health Record Format and Contents (151)
37 Confidentiality of the Health Record (152)
38 Transfer of Health Records and Information (153)
39 Records Retention (154)

40
41 Each policy, procedure and program in the health care delivery
42 system is reviewed at least annually and revised as necessary
43 under the direction of the health authority. Each document
44 bears the date of the most recent review or revision and signa-
45 ture of the reviewer.

46
47 Discussion: The facility need not develop policies
48 and procedures for the following standards when the
49 processes, programs and/or services do not exist:

50
51 Standard 106 - Liaison Staff
52 Standard 108 - Public Advisory Committee
53 Standard 124 - Utilization of Volunteers
54 Standard 133 - Skilled Nursing/Infirmary Care
55 Standard 138 - Standing Orders
56 Standard 143 - Pregnant Inmates

1 It is not expected that each policy and procedure in the
2 original manual be signed by the health authority. In-
3 stead, a declaration paragraph should be contained at
4 the beginning or end of the manual outlining the fact
5 that the entire manual has been reviewed and approved,
6 followed by the proper signature. When individual
7 changes are made in the manual, they would need to be
8 initialed by the health authority.
9

10 Periodic review of policies, procedures and programs is
11 considered good management practice. This process al-
12 lows the various changes made during the year to be
13 formally incorporated into the agency manual instead
14 of accumulating a series of scattered documents. More
15 importantly, the process of annual review facilitates
16 decision-making regarding previously discussed but un-
17 resolved matters.
18

19 2. IMPORTANT STANDARDS

20 105 - Support Services

21
22
23
24
25 If health services are delivered in the facility, adequate staff,
26 space, equipment, supplies, materials and publications as deter-
27 mined by the health authority are provided for the performance
28 of health care delivery.
29

30 Discussion: The type of space and equipment for the
31 examination/treatment room will depend upon the level
32 of health care provided in the facility and the capa-
33 bilities and desires of health providers. In all facili-
34 ties, space should be provided where the inmate can be
35 examined and treated in private.
36

37 Basic items generally include:

38
39 Thermometers;
40 Blood pressure cuff;
41 Stethoscope;
42 Ophthalmoscope;
43 Otoscope;
44 Percussion hammer;
45 Scale;
46 Examining table;
47 Goose neck light;
48 Wash basin;
49 Transportation equipment (e.g., wheelchair and
50 litter);
51 Drug and medications books, such as the Physician's
52 Desk Reference or AMA Drug Evaluations; and
53 Medical dictionary.

1 If female inmates receive medical services in the facility, ap-
2 propriate equipment should be available for pelvic examinations.
3

4 If psychiatric services are provided in the jail, the following
5 basic items should be provided:
6

7 Private interviewing space;
8 Desk;
9 Two chairs; and
10 Lockable file.
11

12 106 - Liaison Staff

13
14
15
16 In facilities without any full-time qualified health personnel,
17 written policy and defined procedures require that a health
18 trained staff member coordinates the health delivery services
19 in the facility under the joint supervision of the responsible
20 physician and facility administrator.
21

22 Discussion: Invaluable service can be rendered by a
23 health trained corrections officer or social worker
24 who may, full or part-time, review receiving screening
25 forms for follow-up attention, facilitate sick call by
26 having inmates and records available for the health
27 provider, and help to carry out physician orders re-
28 garding such matters as diets, housing and work assign-
29 ments.
30

31 Qualified health personnel are physicians, dentists
32 and other professional and technical workers who by
33 state law engage in activities that support, comple-
34 ment or supplement the functions of physicians and/or
35 dentists and who are licensed, registered or certified
36 as appropriate to their qualifications to practice;
37 further, they practice only within their license,
38 certification or registration.
39

40 Health trained staff may include correctional officers
41 and other personnel without health care licenses who
42 are trained in limited aspects of health care as de-
43 termined by the responsible physician.
44

45 107 - Peer Review

46
47
48
49 Written policy defines the medical peer review program utilized
50 by the facility.
51

52 Discussion: Quality assurance programs are methods
53 of insuring the quality of medical care. Funding
54 sources sometimes mandate quality assurance review
55 as a condition for funding medical care.

1 The American Medical Association Resolution 121
2 (A-76) on quality assurance passed by the AMA House
3 of Delegates (1976) reads: "RESOLVED, That the
4 American Medical Association endorse the principle
5 that correctional facilities provide adequate medi-
6 cal care to their inmates which is subject to physi-
7 cian peer review in each community."
8

9 A sample policy might be:
10

11 "If complaints regarding health care of jail
12 inmates exist, they will be referred to the
13 county medical or specialty society for fol-
14 low-up the same as complaints are handled re-
15 garding health care provided to residents in
16 the community."
17

18 Formal, periodic peer review by an outside agency,
19 while not required by the standard, is implemented
20 by some jails on the basis that it helps to advance
21 the effectiveness of the jail health care delivery
22 system. Some county medical societies, upon request
23 from the sheriff or jail administrator, send in a
24 volunteer team of various specialists to review the
25 jail's health care system and make recommendations
26 regarding needed changes.
27

28 29 108 - Public Advisory Committee 30 31

32 If the facility has a public advisory committee, the committee
33 has health care services as one of its charges. One of the com-
34 mittee members is a physician.
35

36 Discussion: Correctional facilities are public trusts,
37 but are often removed from public awareness. Advisory
38 committees fill an important need in bringing the best
39 talent in the community to help in problem-solving.
40 The role of the advisory committee is to review the
41 facility's program and advise those responsible. Such
42 a monitoring process helps the staff identify problems,
43 solutions and resources.
44

45 The committee may be an excellent resource for support
46 or facilitation of medical peer review processes which
47 are carried out by the medical society or other peer
48 review agencies.
49

50 The composition of the committee should be representa-
51 tive of the community and the size and character of
52 the correctional facility. The advisory committee
53 should represent the local medical and legal pro-
54 fessions and may include key lay community repre-
55 sentatives.

1 While grand juries and public health department in-
2 spection teams play an important role in advising
3 jails in some communities, their operations do not
4 satisfy compliance, mainly because they are more of-
5 ficial than "public" bodies.
6

7 Please refer to the AMA monographs "The Role of State
8 and Local Medical Society Jail Advisory Committees"
9 and "Organizing and Staffing Citizen Advisory Com-
10 mittees to Upgrade Jail Medical Programs."
11

12 13 109 - Decision-Making -- Special Problem Patients 14 15

16 Written policy requires consultation between the facility adminis-
17 trator and the responsible physician or their designees prior to
18 the following actions being taken regarding patients who are diag-
19 nosed as having significant medical or psychiatric illnesses:
20

21 Housing assignments;
22 Program assignments;
23 Disciplinary measures; and
24 Admissions to and transfers from institutions.
25

26 Discussion: Maximum cooperation between custody per-
27 sonnel and health care providers is essential so that
28 both groups are made aware of movements and decisions
29 regarding special problem patients. Medical or psy-
30 chiatric problems may complicate work assignments or
31 disciplinary management. Medications may have to be
32 adjusted for safety at the work assignment or prior to
33 transfer.
34

35 Significant aspects of medical or psychiatric illness
36 may include:
37

- 38 1) Suitability for travel based on medical
39 evaluation;
- 40 2) Preparation of a summary or copy of per-
41 tinent health record information (please
42 refer to Standard 151 for guidelines);
43
- 44 3) Medication or other therapy required enroute; and
45
- 46 4) Instructions to transporting personnel re-
47 garding medication or other special treatment.
48

49
50 Please refer to the AMA monographs "The Recognition of
51 Jail Inmates with Mental Illness: Their Special Problems
52 and Need for Care" and "Management of Common Medical Prob-
53 lems In Correctional Institutions."

110 - Special Handling: Patients With Acute Illnesses

1 Written policy and defined procedures require post-admission screen-
2 ing and referral for care of patients with acute psychiatric and
3 other serious illnesses as defined by the health authority; those
4 who require health care beyond the resources available in the fa-
5 cility or whose adaptation to the correctional environment is signifi-
6 cantly impaired, are transferred or committed to a facility where
7 such care is available. A written list of referral sources, ap-
8 proved by the health authority, exists.

9
10 Discussion: Psychiatric and other acute medical prob-
11 lems identified either at receiving screening or after
12 admission must be followed up by medical staff. The
13 urgency of the problems determines the responses. Sui-
14 cidal and psychotic patients are emergencies and should
15 be held for only the minimum time necessary, but no
16 longer than 12 hours before emergency care is rendered.

17
18 Inmates awaiting emergency evaluation should be housed
19 in a specially designated area with constant super-
20 vision by trained staff.

21
22 All sources of assistance for mentally and other acutely
23 ill inmates should be identified in advance of need and
24 referrals should be made in all such cases.

25
26 All too often seriously ill inmates have been maintained
27 in correctional facilities in unhealthy and anti-thera-
28 peutic environments. The following conditions should be
29 met if treatment is to be provided in the facility:

- 30
31 1) Safe, sanitary, humane environment as re-
32 quired by sanitation, safety and health
33 codes of the jurisdiction;
34
35 2) Adequate staffing/security to help inhibit
36 suicide and assault (i.e., staff within
37 sight or sound of all inmates); and
38
39 3) Trained personnel available to provide
40 treatment and close observation.

41
42
43 111 - Monitoring of Services/Internal Quality Assurance

44
45
46 Written policy requires that the on-site monitoring of health services
47 rendered by providers other than physicians and dentists, including
48 inmate complaints regarding such, the quality of the health record,
49 review of pharmaceutical practices, carrying out direct orders, and the
50 implementation and status of standing orders, is performed by the re-
51 sponsible physician who reviews the health services delivered as fol-
52 lows:

- 1 1) At least once per month in facilities with less
2 than 50 inmates;
3
4 2) At least every two weeks in facilities of 50 to
5 200 inmates; and
6
7 3) At least weekly in facilities of over 200 inmates.

8
9 Discussion: The responsible health authority must be
10 aware that patients are receiving appropriate care
11 and that all written instructions and procedures are
12 properly carried out. Except in unusual circumstances,
13 it is felt that this process of internal quality as-
14 surance can be accomplished only by on-site monitoring.

15
16 In many jails where qualified health care providers are
17 not on staff, the health trained correctional officer
18 may be the only person available to help carry out
19 physicians' direct orders (e.g., administering medica-
20 tions, implementing special diets, etc.). It is ex-
21 pected that these health related services of the cor-
22 rectional officer/jailer would be included for monitor-
23 ing by the responsible physician.

24
25
26 112 - First Aid Kits

27
28
29 First aid kits are available in designated areas of the facility.
30 The health authority approves the contents, number, location and
31 procedures for monthly inspection of the kits.

32
33 Discussion: Examples of content for first aid kits in-
34 clude: roller gauze, sponges, triangle bandages, ad-
35 hesive tape, band aids, etc., but not emergency drugs.

36
37 Kits can be either purchased or assembled from improvised
38 materials. All kits, whether purchased or assembled,
39 meet compliance if the following points are observed in
40 their selections:

- 41
42 1) The kits should be large enough and should
43 have the proper contents for the place
44 where they are to be used;
45
46 2) The contents should be arranged so that the
47 desired package can be found quickly with-
48 out unpacking the entire contents of the
49 box; and
50
51 3) Material should be wrapped so that unused
52 portions do not become dirty through handling.

113 - Access to Diagnostic Services

1 Written policy and defined procedures require the outlining of
2 access to laboratory and diagnostic services utilized by facility
3 providers.

4
5 Discussion: Specific resources for the studies and
6 services required to support the level of care pro-
7 vided to inmates of the facility (e.g., private
8 laboratories, hospital departments of radiology and
9 public health agencies) are important aspects of a
10 comprehensive health care system and need to be
11 identified and specific procedures outlined for their
12 use.

13
14
15 114 - Notification of Next of Kin

16
17
18 Written policy and defined procedures require notification of the
19 inmate's next of kin or legal guardian in case of serious illness,
20 injury or death.

21
22
23 115 - Postmortem Examination

24
25
26 Written policy and defined procedures require that in the event of
27 an inmate death:

- 28
29 1) The medical examiner or coroner is notified
30 immediately; and
31
32 2) A postmortem examination is requested by the re-
33 sponsible health authority if the death is un-
34 attended or under suspicious circumstances.

35
36 Discussion: If the cause of death is unknown or oc-
37 curred under suspicious circumstances or the inmate
38 was unattended from the standpoint of not being under
39 current medical care, a postmortem examination is in
40 order.

41
42
43 116 - Disaster Plan

44
45
46 Written policy and defined procedures require that the health
47 aspects of the facility's disaster plan are approved by the re-
48 sponsible health authority and facility administrator.

1 Discussion: Policy and procedures for health care
2 services in the event of a man-made or natural
3 disaster, riot or internal or external (e.g., civil
4 defense, mass arrests) disaster must be incorporated
5 in the correctional system plan and made known to
6 all facility personnel.

7
8 Health aspects of the disaster plan, among other
9 items, include the triaging process, outlining
10 where care can be provided and laying out a back-up
11 plan.

B. PERSONNEL

Standards pertaining to qualifications, training, work appraisal and supervision of staff are included in this section.

1. ESSENTIAL STANDARDS

117 - Licensure

1 State licensure, certification or registration requirements
2 and restrictions apply to qualified health care personnel
3 who provide services to inmates. Verification of current
4 credentials is on file at the facility.

5
6 Discussion: When applicable laws are ignored, the
7 quality of health care is compromised.

8
9 Verification may consist of copies of current cre-
10 dentials or letters from the state licensing or
11 certifying bodies regarding the status of creden-
12 tials for current personnel.

13
14
15 118 - Job Descriptions

16
17
18 Written job descriptions define the specific duties and re-
19 sponsibilities of personnel who provide health care in the
20 facility's health care system. These are approved by the
21 health authority.

22
23
24 119 - Staff Development and Training

25
26
27 A written plan approved by the health authority provides for
28 all health services personnel to participate in orientation
29 and training appropriate to their health care delivery activi-
30 ties and outlines the frequency of continuing training for each
31 staff position.

32
33 Discussion: Providing health services in a detention/
34 correctional facility is a unique task which requires
35 particular experience or orientation for personnel.
36 These needs should be formally addressed by the health
37 authority based on the requirements of the institution.

38
39 All levels of the health care staff require regular
40 continuing staff development and training in order to
41 provide the highest quality of care.

42
43 Proper initial orientation and continuing staff develop-
44 ment and training may serve to decelerate "burn-out" of
45 health providers and help to re-emphasize the goals and
46 philosophy of the health care system.

1 Please refer to the following AMA monographs:
2

- 3 1) "Orienting Health Providers to the Jail
4 Culture";
- 5
- 6 2) "Orienting Jailers to Health and Medical
7 Care Delivery Systems"; and
- 8
- 9 3) "The Use of Allied Health Personnel in Jails:
10 Legal Considerations."
11

12
13 120 - Basic Training of Correctional Officers/Jailers
14

15
16 Written policy and a training program established or approved
17 by the responsible health authority in cooperation with the
18 facility administrator, guide the training of all correctional
19 officers regarding:
20

- 21 1) Types of and action required for potential
22 emergency situations;
- 23
- 24 2) Signs and symptoms of an emergency;
- 25
- 26 3) Administration of first-aid, with training
27 to have occurred within the past three years;
- 28
- 29 4) Methods of obtaining emergency care;
- 30
- 31 5) Procedures for transferring patients to appro-
32 priate medical facilities or health care pro-
33 viders; and
- 34
- 35 6) Signs and symptoms of mental illness, retarda-
36 tion, emotional disturbance and chemical de-
37 pendency.
38

39
40 A sufficient number of correctional officers are trained in
41 basic cardiopulmonary resuscitation (CPR) so that they can
42 always respond to emergency situations in any part of the
43 facility within four minutes.
44

45 Minimally, one health trained correctional officer per shift
46 is trained in the recognition of symptoms of illnesses most
47 common to the inmates.
48

49 Discussion: It is imperative that facility personnel
50 be made aware of potential emergency situations, what
51 they should do in facing life-threatening situations
52 and their responsibility for the early detection of
53 illness and injury.

1 Current first aid certification must be from an
2 approved body, such as the American Red Cross
3 (ARC), a hospital, fire or police department,
4 clinic, training academy or any other approved
5 agency, or an individual possessing a current
6 ARC instructor's certificate.
7

8 Training regarding emotional disturbance, develop-
9 mental disability and chemical dependency is es-
10 sential for the recognition of inmates who need
11 evaluation and possible treatment which, if not
12 provided, could lead to life-threatening situa-
13 tions.
14

15 Please refer to the following AMA monographs which
16 can be used to help train correctional officers in
17 the above subjects:
18

- 19 1) "The Recognition of Jail Inmates With
20 Mental Illness: Their Special Problems
21 and Needs for Care";
- 22
- 23 2) "Guide for the Care and Treatment of
24 Chemically Dependent Inmates";
- 25
- 26 3) "Management of Common Medical Problems
27 in Correctional Institutions"; and
- 28
- 29 4) "Orienting Jailers to Health and Medical
30 Care Delivery Systems."
31

32 Training materials on the recognition of symptoms of
33 common illnesses can be found in the AMA Manual For
34 The Training of Jailers in Receiving Screening and
35 Health Education.
36

37
38 121 - Medication Administration Training
39

40
41 Written policy and defined procedures guide the training of
42 personnel who administer medication and require training from
43 or approved by the responsible physician and the facility ad-
44 ministrators or their designees regarding:
45

- 46 1) Accountability for administering medications
47 in a timely manner according to physician
48 orders; and
- 49
- 50 2) Recording the administration of medications
51 in a manner and on a form approved by the
52 health authority.

1 Discussion: Training from the responsible physician
2 encompasses the medical aspects of the administration
3 of medications. Training from the facility administra-
4 tor encompasses security matters inherent in the ad-
5 ministration of medications in a correctional facility.

6
7 The concept of administration of medications accord-
8 ing to orders includes performance in a timely manner.

9
10 Please refer to Standard 150 for the definition of ad-
11 ministration of medications.

12
13
14 122 - Inmate Workers

15
16
17 Written policy requires that inmates are not used for the
18 following duties:

- 19 1) Performing direct patient care services;
- 20 2) Scheduling health care appointments;
- 21 22 3) Determining access of other inmates to
23 health care services;
- 24 4) Handling or having access to surgical
25 instruments, syringes, needles, medica-
26 tions or health records; and
- 27 5) Operating medical equipment for which
28 they are not trained.

29
30
31 Discussion: Understaffed correctional institutions are
32 inevitably tempted to use inmates in health care delivery
33 to perform services for which civilian personnel are not
34 available.

35
36
37 Their use frequently violates state laws, invites litiga-
38 tion and brings discredit to the correctional health care
39 field, to say nothing of the power these inmates can ac-
40 quire and the severe pressure they may receive from fellow
41 inmates.

42
43
44
45 2. IMPORTANT STANDARDS

46
47
48 123 - Food Service Workers - Health and Hygiene Requirements

49
50
51
52 Written policy and defined procedures require that inmates
53 and other persons working in food service:

- 1 1) Are subject to the same laws and/or regula-
2 tions as food service workers in the community
3 where the facility is located;
- 4 5 2) Are monitored each day for health and cleanli-
6 ness by the director of food services or his/her
7 designee; and
- 8 9 3) Are instructed to wash their hands upon report-
10 ing to duty and after using toilet facilities.

11
12 If the facility's food services are provided by an outside agency
13 or an individual, the facility has written verification that the
14 outside provider complies with the local and state regulations
15 regarding food service.

16
17 Discussion: All inmates and other persons working
18 in the food service should be free from diarrhea,
19 skin infections and other illnesses transmissible
20 by food or utensils.

21
22
23 124 - Utilization of Volunteers

24
25
26 Written policy and defined procedures approved by the health
27 authority and facility administrator for the utilization of
28 volunteers in health care delivery include a system for selec-
29 tion, training, length of service, staff supervision, defini-
30 tion of tasks, responsibilities and authority.

31
32 Discussion: To make the experience of volunteers
33 productive and satisfying for everyone involved --
34 patients, staff, administration and the public --
35 goals and purposes must be clearly stated and under-
36 stood and the structure of the volunteer program well-
37 defined.

38
39 Volunteers are an important personnel resource in the
40 provision of human services. As demands for services
41 increase, volunteers can be expected to play an in-
42 creasingly important part in health care service de-
43 livery.

44
45 The most successful volunteer programs treat volunteers
46 like staff for all aspects except pay, including requir-
47 ing volunteers to safeguard the principle of confiden-
48 tiality.

49
50 Please refer to the AMA monograph on "The Use of
51 Volunteers in Jails."

C. CARE AND TREATMENT

Various aspects of the care and treatment of patients, such as types of services, access to services, practices, procedures and treatment philosophy are included in this section.

1. ESSENTIAL STANDARDS

125 - Emergency Services

1 Written policy and defined procedures require that the facility provide 24-hour emergency medical and dental care availability as outlined in a written plan which includes arrangements for:

- 2 1) Emergency evacuation of the inmate from within the facility;
- 3 2) Use of an emergency medical vehicle;
- 4 3) Use of one or more designated hospital emergency departments or other appropriate health facilities;
- 5 4) Emergency on-call physician and dentist services when the emergency health facility is not located in a nearby community; and
- 6 5) Security procedures that provide for the immediate transfer of inmates when appropriate.

7 Discussion: Emergency medical and dental care is care for an acute illness or an unexpected health need that cannot be deferred until the next scheduled sick call or clinic.

126 - Receiving Screening

1 Written policy and defined procedures require receiving screening to be performed by health trained or qualified health care personnel on all inmates (including transfers) immediately upon arrival at the facility. Arrestees who are unconscious, semi-conscious, bleeding or otherwise obviously in need of immediate medical attention, are referred immediately for emergency care. If they are referred to a community hospital, their admission or return to the jail is predicated upon written medical clearance. The receiving screening findings are recorded on a printed form approved by the health authority. At a minimum the screening includes:

2 Inquiry into:

- 3 1) Current illness and health problems including mental, dental and communicable diseases;

- 1 2) Medications taken and special health
2 requirements;
- 3
- 4 3) Use of alcohol and other drugs, includ-
5 ing types, methods, amounts, frequency,
6 date or time of last use and a history
7 of problems which may have occurred after
8 ceasing use (e.g., convulsions);
9
- 10 4) Other health problems, as designated by
11 the responsible physician, including
12 mental illness; and
- 13
- 14 5) For females, a history of gynecological
15 problems and pregnancies.
16

17 Observation of:

- 18
- 19 1) Behavior, which includes state of con-
20 sciousness, mental status, appearance,
21 conduct, tremors and sweating;
22
- 23 2) Body deformities and ease of movement;
24 and
25
- 26 3) Condition of skin, including trauma
27 markings, bruises, lesions, jaundice,
28 rashes and infestations and needle
29 marks or other indications of drug
30 abuse.
31

32 Disposition such as:

- 33
- 34 1) Referral to an appropriate health care
35 service on an emergency basis; or
36
- 37 2) Placement in the general inmate popula-
38 tion and later referral to an appro-
39 priate health care service; or
40
- 41 3) Placement in the general inmate popula-
42 tion.
43

44 Discussion: Receiving screening is a system of struc-
45 tured inquiry and observation designed to prevent newly
46 arrived inmates who pose a health or safety threat to
47 themselves or others from being admitted to the facil-
48 ity's general population and to get them rapidly ad-
49 mitted to medical care. Receiving screening can be
50 performed by health personnel or by a trained correc-
51 tional officer at the time of booking/admission.

1 Facilities which have reception and diagnostic units
2 and/or a holding room must conduct receiving screening
3 on all inmates immediately upon arrival at the facility
4 as part of the booking/admission procedure. In short,
5 placing two or more inmates in a holding room pending
6 screening the next morning fails to meet compliance.
7

8 Some studies indicate that alcohol-related suicide is
9 the number one cause of death in jails; second is "cold
10 turkey withdrawal" from alcohol and other drugs. Hence,
11 it is considered extremely important for booking officers
12 to fully explore the inmate's suicide and/or withdrawal
13 potential. Reviewing with the inmate any history of
14 suicidal behavior and visually observing the inmate's
15 behavior (delusions, hallucinations, communication
16 difficulties, speech and posturing, impaired level of
17 consciousness, disorganization, memory defects, de-
18 pression or evidence of self-mutilation) are recom-
19 mended. Most jails following this approach, coupled
20 with the training of all jailers regarding mental
21 health and chemical dependency aspects, are able to pre-
22 vent all or most suicides and "cold turkey withdrawals."
23

24 If a copy of the receiving screening form accompanies
25 transferees, a full receiving screening need not be con-
26 ducted, but the receiving screening results should be re-
27 viewed and verified.
28

29 127 - Detoxification

30
31
32 Written policy and defined procedures require that detoxification
33 from alcohol, opioids, stimulants and sedative hypnotic drugs is
34 effected as follows:
35

36 When performed at the facility, it is under medical
37 supervision; and
38

39 When not performed at the facility, it is conducted
40 in a hospital or community detoxification center.
41

42 Discussion: Drug detoxification refers to the process
43 by which an individual is gradually withdrawn from a
44 drug by administering decreasing doses either of the
45 same drug upon which the person is physiologically de-
46 pendent or one that is cross-tolerant to it or a drug
47 which has been demonstrated to be effective on the
48 basis of medical research. The detoxification of cer-
49 tain patients (e.g., psychotics, seizure-prone, preg-
50 nant, juveniles or geriatrics) may pose special risks
51 and thus, require special attention. Detoxification
52 from alcohol should not include decreasing doses of
53 alcohol; further, supervised "drying out" may not
54 necessarily involve the use of drugs.

1 Opioids refer to derivatives of opium such as morphine
2 and codeine and synthetic drugs with morphine-like
3 properties.
4

5 Medical supervision means that for in-jail alcohol and
6 opioid detoxification, at a minimum, the inmate must
7 be under 24 hour per day, 60 minutes per hour super-
8 vision of a health trained correctional officer work-
9 ing under a physician's direction. For detoxification
10 from barbiturates and other sedative hypnotic drugs,
11 the program in the jail must be under the 24 hour
12 supervision of a licensed nurse at a minimum.
13

14 Fixed drug regimens (i.e., every patient gets the same
15 dose of medication regardless of individual symptoms
16 and medical condition) are generally not recommended.
17

18 Please refer to the AMA monograph "Guide for the Care
19 and Treatment of Chemically Dependent Inmates" for
20 further information on the subject.
21

22 128 - Access to Treatment

23
24
25 Written policy and defined procedures require that information
26 regarding access to the health care services is communicated
27 orally and in writing to inmates upon their arrival at the
28 facility.
29

30 Discussion: The facility should follow the policy of
31 explaining access procedures orally to all inmates,
32 especially those unable to read. Where the facility
33 frequently has non-English speaking inmates, procedures
34 should be explained and written in their language.
35 Signs posted in the dayroom/living area do satisfy com-
36 pliance; signs posted in the booking area do not.
37

38 129 - Daily Triage of Complaints

39
40
41 Written policy and defined procedures require that inmates'
42 health complaints are documented and processed at least daily
43 as follows:
44

45 Solicited daily and acted upon by health trained cor-
46 rectional personnel; and
47

48 Followed by appropriate triage and treatment by quali-
49 fied health personnel where indicated.
50

51 Discussion: Some jails note on the complaint slip the
52 action taken regarding triaging and file such slips in
53 the inmate's medical record; others use a log. These
54 are examples of health complaints being documented.

130 - Sick Call

1 Written policy and defined procedures require that sick call
2 is conducted by a physician and/or other qualified health per-
3 sonnel and is available to each inmate as follows:
4

5 1) In small facilities of less than 50 inmates,
6 sick call is held once per week at a minimum;
7

8 2) In medium-sized facilities of 50 to 200 in-
9 mates, sick call is held at least three days
10 per week; and
11

12 3) Facilities of over 200 inmates hold sick call a
13 minimum of five days a week.
14

15 If an inmate's custody status precludes attendance at sick call,
16 arrangements are made to provide sick call services in the place
17 of the inmate's detention.
18

19 Discussion: Some people refer to sick call as a "clinic
20 visit." Clinic care or "sick call" is care for an am-
21 bulatory inmate with health care complaints which are
22 evaluated and treated at a particular place in time. It
23 is the system through which each inmate reports for and
24 receives appropriate medical services for non-emergency
25 illness or injury.
26

27 The size of the facility is determined by yearly average
28 daily population, rather than rated capacity.
29

30 131 - Health Appraisal

31
32
33
34 Written policy and defined procedures require that:
35

36 Health appraisal is completed for each inmate within 14
37 days after arrival at the facility. In the case of an
38 inmate who has received a health appraisal within the
39 previous 90 days, a new health appraisal is not required
40 except as determined by the physician or his/her designee.
41 Health appraisal includes:
42

43 1) Review of the earlier receiving screening;
44

45 2) Collection of additional data to complete the
46 medical, dental and psychiatric histories;
47

48 3) Laboratory and/or diagnostic tests (as deter-
49 mined by the responsible physician with recom-
50 mendations from the local public health au-
51 thority) to detect communicable disease, in-
52 cluding venereal diseases and tuberculosis;

39
40
41
42
43
44
45
46
47
48
49

- 4) Recording of height, weight, pulse, blood pressure and temperature;
- 5) Other tests and examinations as appropriate;
- 6) Medical examination (including gynecological assessment of females) with comments about mental and dental status;
- 7) Review of the results of the medical examination, tests and identification of problems by a physician and/or his/her designee when the law allows such; and
- 8) Initiation of therapy when appropriate.

The collection and recording of health appraisal data are handled as follows:

- 1) The forms are approved by the health authority;
- 2) Health history and vital signs are collected by health trained or qualified health personnel; and
- 3) Collection of all other health appraisal data is performed only by qualified health personnel.

Discussion: The extent of the health appraisal, including medical examinations, is defined by the responsible physician, but should include at least the above. When appropriate, additional investigation should be carried out regarding:

- 1) The use of alcohol and/or drugs including the types of substances abused, mode of use, amounts used, frequency of use and date or time of last use;
- 2) Current or previous treatment for alcohol or drug abuse and if so, when and where;
- 3) Whether the inmate is taking medication for an alcohol or drug abuse problem such as disulfiram, methadone hydrochloride or others;

- 4) Current or past illnesses and health problems related to substance abuse such as hepatitis, seizures, traumatic injuries, infections, liver diseases, etc.; and
- 5) Whether the inmate is taking medication for a psychiatric disorder and if so, what drugs and for what disorder.

Further assessment of psychiatric problems identified at receiving screening or after admission should be provided by either the medical staff or the psychiatric services staff within 14 days. In most facilities it can be expected that assessment will be done by a general practitioner or family practitioner.

Psychiatric services staff can include psychiatrists, family physicians with psychiatric orientation, psychologists, psychiatric nurses, social workers and trained correctional counselors.

Please refer to Standard 106 for definitions of the different levels of health personnel.

Regarding waiver of laboratory tests for tuberculosis and venereal diseases, a letter from the public health authority citing the incidence of the disease(s) in that locality and the justification for not conducting such tests on all inmates is required for consideration of waiver.

132 - Direct Orders

Treatment by qualified and health trained personnel other than a physician or dentist is performed pursuant to direct orders written and signed by personnel authorized by law to give such orders.

Discussion: Medical and other practice acts differ in various states as to issuing direct orders for treatment and therefore, laws in each state need to be studied for implementation of this standard.

133 - Skilled Nursing/Infirmiry Care

Written policy and defined procedures guide skilled nursing or infirmiry care and require:

- 1) A definition of the scope of skilled nursing care provided at the facility;
- 2) A physician on call 24 hours per day;
- 3) Supervision of the infirmary by a registered nurse on a daily basis;
- 4) A health trained person on duty 24 hours per day;
- 5) All inmate patients being within sight or sound of a staff person;
- 6) A manual of nursing care procedures; and
- 7) A separate individual and complete medical record for each inmate.
- Discussion: An infirmary is an area established within the correctional facility in which organized bed care facilities and services are maintained and operated to accommodate two or more inmates for a period of 24 hours or more and which is operated for the express or implied purpose of providing skilled nursing care for persons who are not in need of hospitalization.
- Skilled nursing/infirmary care is defined as inpatient bed care by or under the supervision of a registered nurse for an illness or diagnosis which requires limited observation and/or management and does not require admission to a licensed hospital.
- Supervision is defined as overseeing the accomplishment of a function or activity.
- Advancement of the quality of care in this type of medical area begins with the assignment of responsibility to one physician. Depending upon the size of the infirmary, the physician may be employed part or full-time.
- Nursing care policies and procedures should be consistent with professionally recognized standards of nursing practice and in accordance with the Nurse Practice Act of the state. Policies and procedures should be developed on the basis of current scientific knowledge and take into account new equipment and current practices.

2. IMPORTANT STANDARDS

134 - Hospital Care

1 If a facility operates a hospital, it meets the legal requirements for a licensed general hospital in the state.

Discussion: Even though a hospital operated by a correctional facility may not be considered a "general" hospital, and therefore not reviewed by a state licensing body, it is important that the care provided be consistent with that provided generally within the state. Where conditions in the facility are inadequate to meet state standards, the quality of care is compromised.

135 - Treatment Philosophy

Medical procedures are performed in privacy, with a chaperone present when indicated, and in a manner designed to encourage the patient's subsequent utilization of appropriate health services.

When rectal and pelvic examinations are indicated, verbal consent is obtained from the patient.

Discussion: Health care should be rendered with consideration of the patient's dignity and feelings.

Please refer to the discussion in Standard 102, which outlines the American Medical Association's policy on the conducting of body cavity searches.

136 - Use of Restraints

Written policy and defined procedures guide the use of medical restraints and include an identification of the authorization needed, and when, where, duration and how restraints may be used. The health care staff do not participate in disciplinary restraint of inmates, except for monitoring their health status.

Discussion: This standard applies to those situations where the restraints are part of health care treatment. The same kinds of medical restraints that would be appropriate for individuals treated in the community may likewise be used for medically restraining incarcerated individuals (e.g., leather or canvas hand and leg restraints, chemical restraints and straight jackets).

1 Medical monitoring of the health status of inmates
2 held under disciplinary restraints should be carried
3 out on a periodic basis by qualified or health trained
4 personnel.

5
6
7 137 - Special Medical Program
8
9

10 Written policy and defined procedures guide the special medical
11 program which exists for inmates requiring close medical super-
12 vision, including chronic and convalescent care. A written in-
13 dividualized treatment plan, developed by a physician, exists
14 for these patients and includes directions to health care and
15 other personnel regarding their roles in the care and super-
16 vision of these patients.

17
18 Discussion: The special medical program services a
19 broad range of health problems (e.g., seizure dis-
20 orders, diabetes, potential suicide, chemical de-
21 pendency and psychosis). These are some of the special
22 medical conditions which dictate close medical super-
23 vision. In these cases, the facility must respond
24 appropriately by providing a program directed to
25 individual needs.

26
27 The program need not necessarily take place in an
28 infirmary, although a large facility may wish to con-
29 sider such a setting for the purposes of efficiency
30 (see Standard 133). When a self-contained type of
31 program does not exist, the following are provided:

- 32
33 1) Correctional staff officer trained
34 in health care;
35
36 2) Sufficient staff to help prevent
37 suicide and assault;
38
39 3) At a minimum, all inmate patients
40 are within sight of a staff person;
41 and
42
43 4) Qualified health personnel to pro-
44 vide treatment.
45

46 Chronic care is medical service rendered to a patient
47 over a long period of time; treatment of diabetes,
48 asthma and epilepsy are examples.

49
50 Convalescent care is medical service rendered to a
51 patient to assist in the recovery from illness or
52 injury.

1 A treatment plan is a series of written statements which
2 specify the particular course of therapy and the roles of
3 medical and non-medical personnel in carrying out the course
4 of therapy. It is individualized and based on assessment of
5 the patient's needs and includes a statement of the short and
6 long term goals as well as the methods by which the goals will
7 be pursued. When clinically indicated, the treatment plan
8 provides inmates with access to a range of supportive and re-
9 habilitative services (e.g., individual or group counseling
10 and/or self-help groups) that the physician deems appropriate.

11
12 Please refer to the following AMA monographs for further sug-
13 gestions: "Management of Common Medical Problems in Correctional
14 Institutions" and "Guide for the Care and Treatment of Chemically
15 Dependent Inmates."
16

17
18 138 - Standing Orders
19

20
21 If standing medical orders exist, written policy requires that
22 they are developed and signed by the responsible physician.
23 When utilized, they are countersigned in the medical record by
24 the physician.
25

26 Discussion: Standing medical orders are written for
27 the definitive treatment of identified conditions
28 and for on-site treatment of emergency conditions
29 for any person having the condition to which the
30 order pertains.
31

32
33 139 - Continuity of Care
34

35
36 Written policy and defined procedures require continuity of care
37 from admission to discharge from the facility, including referral
38 to community care when indicated.
39

40 Discussion: As in the community, health providers
41 should obtain information regarding previous care
42 when undertaking the care of a new patient. Like-
43 wise when the care of the patient is transferred
44 to providers in the community, appropriate health
45 information is shared with the new providers in
46 accord with consent requirements.
47

48
49 140 - Health Evaluation - Inmates in Segregation
50

51
52 Written policy and defined procedures require that inmates removed
53 from the general population and placed in segregation are evaluated

1 at least three (3) days per week by health trained personnel and
2 that the encounters are documented.

3
4 Discussion: Due to the possibility of injury and/or
5 depression during such periods of isolation, health
6 evaluations should include notation of bruises or
7 other trauma markings and comments regarding the
8 inmate's attitude and outlook.

9
10 Carrying out this policy may help to prevent suicide
11 or serious illness.

12
13
14 141 - Health Promotion and Disease Prevention

15
16
17 Written policy and defined procedures require that medical
18 preventive maintenance is provided to inmates of the facility.

19
20 Discussion: Medical preventive maintenance includes
21 health education and medical services (such as inocu-
22 lations and immunizations) provided to take advance
23 measures against disease and instruction in self-
24 care for chronic conditions. Self-care is defined as
25 care for a condition which can be treated by the in-
26 mate and may include "over-the-counter" type medica-
27 tions.

28
29 Subjects for health education may include:

- 30
31 1) Personal hygiene and nutrition;
32
33 2) Venereal disease, tuberculosis and
34 other communicable diseases;
35
36 3) Effects of smoking;
37
38 4) Self-examination for breast cancer;
39
40 5) Dental hygiene;
41
42 6) Drug abuse and danger of self-
43 medication;
44
45 7) Family planning, including, as
46 appropriate, both services and
47 referrals;
48
49 8) Physical fitness; and
50
51 9) Chronic diseases and/or disabilities.

142 - Chemically Dependent Inmates

1 Written policy and defined procedures regarding the clinical
2 management of chemically dependent inmates require:

- 3
4 1) Diagnosis of chemical dependency by a physi-
5 cian or properly qualified designee (if au-
6 thorized by law);
7
8 2) A physician deciding whether an individual
9 needs pharmacological or non-pharmacological
10 supported care;
11
12 3) An individualized treatment plan which is
13 developed and implemented; and
14
15 4) Referral to specified community resources
16 upon release when appropriate.

17
18 Discussion: Existing community resources should be
19 utilized if possible.

20
21 The term chemical dependency refers to individuals
22 who are physiologically and/or psychologically de-
23 pendent on alcohol, opium derivatives and synthetic
24 drugs with morphine-like properties (opioids), stimu-
25 lants and depressants.

26
27 Please refer to the AMA monograph "Guide For The
28 Care and Treatment of Chemically Dependent Inmates."

29
30
31 143 - Pregnant Inmates

32
33
34 Written policy and defined procedures require that comprehensive
35 counseling and assistance are provided to pregnant inmates in
36 keeping with their expressed desires in planning for their un-
37 born children, whether desiring abortion, adoption service or
38 to keep the child.

39
40 Discussion: It is advisable that a formal legal opinion
41 as to the law relating to abortion be obtained and based
42 upon that opinion, written policy and defined procedures
43 should be developed for each jurisdiction.

44
45 Counseling and social services should be available from
46 either facility staff or community agencies.

144 - Dental Care

1 Written policy and defined procedures require that dental care
2 is provided to each inmate under the direction and supervision
3 of a dentist licensed in the state as follows:

- 4
- 5 1) Dental screening within 14 days of admission;
- 6
- 7 2) Dental hygiene service within 14 days of ad-
8 mission;
- 9
- 10 3) Dental examinations within three months of
11 admission; and
- 12
- 13 4) Dental treatment, not limited to extractions,
14 when the health of the inmate would otherwise
15 be adversely affected as determined by the
16 dentist.

17
18 Discussion: While dental hygiene by standard definition
19 includes clinical procedures taken to protect the health
20 of the mouth and chewing apparatus, minimum compliance
21 will be instruction in the proper brushing of teeth.

22
23 The dental examination should include taking or review-
24 ing the patient's dental history and examination of hard
25 and soft tissue of the oral cavity by means of an illumi-
26 nator light, mouth mirror and explorer. X-rays for diag-
27 nostic purposes should be available if deemed necessary.
28 The results are recorded on an appropriate uniform dental
29 record utilizing a number system such as the Federation
30 Dentaire Internationale System.

31
32 Please refer to the AMA monograph "Dental Care for Jail
33 Inmates."

34
35
36 145 - Delousing

37
38 Written policy approved by the responsible physician defines de-
39 lousing procedures used in the facility.

40
41
42 146 - Exercising

43
44
45 Written policy and defined procedures outline a program of exer-
46 cising and require that each inmate is allowed a daily (i.e.,
47 7 days per week) minimum of one hour of exercise involving
48 large muscle activity, away from the cell, on a planned, super-
49 vised basis.

1 Discussion: Examples of large muscle activity include
2 walking, jogging in place, basketball, ping pong and
3 isometrics.
4

5 Facilities meet compliance of a planned, supervised
6 basis under the following conditions:
7

8 It is recognized that many facilities do not
9 have a separate facility or room for exercis-
10 ing. The dayroom adjacent to the cell may be
11 used for this purpose. The dayroom meets com-
12 pliance, if planned, programmed activities are
13 directly supervised by staff and/or trained
14 volunteers. Otherwise, the designated hour
15 would not be different from any of the other
16 hours of the day. Television and table games
17 do not meet compliance.
18

19 Regarding the use of outside yards, gymnasiums
20 and multi-purpose rooms, making available exer-
21 cising opportunities (e.g., basketball, handball,
22 jogging, running and calisthenics) does satisfy
23 compliance even though inmates may not take ad-
24 vantage of them. While such activities may be
25 more productive under the supervision of a rec-
26 reational staff person, this is not required.
27 For supervision purposes, inmates should be
28 within sight or sound of a staff person.
29

30
31 147 - Personal Hygiene
32

33
34 Written policy and defined procedures outline a program of per-
35 sonal hygiene and require that every facility that would normally
36 expect to detain an inmate at least 48 hours:

- 37
- 38 1) Furnish bathing facilities in the form of either
39 a tub or shower with hot and cold running water;
- 40
- 41 2) Permit regular bathing at least twice a week;
- 42
- 43 3) Permit daily bathing in hot weather in facili-
44 ties without air temperature control; and
- 45
- 46 4) Provide the following items:

47
48 Soap;
49 Toothbrush;
50 Toothpaste or powder;
51 Toilet paper;
52 Sanitary napkins when required; and
53 Laundry services at least weekly.

1 Haircuts and implements for shaving are made available to
2 inmates, subject to security regulations.
3

4
5 148 - Prostheses
6
7

8 Written policy and defined procedures require that medical and
9 dental prostheses are provided when the health of the inmate/
10 patient would otherwise be adversely affected as determined by
11 the responsible physician or dentist.
12

13 Discussion: Prostheses are artificial devices to re-
14 place missing body parts or compensate for defective
15 bodily functions.
16

17
18 149 - Food Service
19
20

21 An adequate diet involving the four basic food groups, based
22 on the Recommended Dietary Allowances, is provided to all in-
23 mates.
24

25 Written policies and defined procedures require provision of
26 special medical and dental diets which are prepared and served
27 to inmates according to the orders of the treating physician
28 and/or dentist and/or as directed by the responsible physician.
29

30 Discussion: Adequate diets frequently are based on
31 those developed by other agencies which utilize the
32 recommended national allowances/guidelines. Equiva-
33 lent nutritional guidelines containing the four basic
34 groups, satisfy compliance. The four basic food groups
35 are:
36

37 Milk and milk products;
38 Meats, fish and other protein foods (e.g.,
39 eggs, dried beans and peas and cheese);
40 Breads and cereals; and
41 Vegetables and fruits.
42

43 The adequate diet referred to in the standard applies
44 to inmates in segregation/isolation as well as all others.

D. PHARMACEUTICALS

This standard addresses the management of pharmaceuticals in line with state and federal laws and/or regulations and requirements for the control of medications. Prescribing practices, stop orders and re-evaluations regarding psychotropic medications are also addressed.

ESSENTIAL STANDARD

150 - Management of Pharmaceuticals

1 Written policy and defined procedures require that the proper
2 management of pharmaceuticals includes:

- 3
- 4 1. Compliance with all applicable state and federal
5 laws and regulations regarding prescribing, dis-
6 pensing and administering of drugs;
7
- 8 2. At a minimum, a formulary specifically developed
9 for both prescribed and non-prescribed medica-
10 tions stocked by the facility;
11
- 12 3. Discouragement of the long-term use of tranquil-
13 izers and other psychotropic drugs;
14
- 15 4. Prescription practices which require that:
16
 - 17 a. Psychotropic medications are pre-
18 scribed only when clinically in-
19 dicated (as one facet of a program
20 of therapy) and are not allowed for
21 disciplinary reasons;
22
 - 23 b. "Stop-order" time periods are stated
24 for behavior modifying medications
25 and those subject to abuse; and
26
 - 27 c. Re-evaluation be performed by the
28 prescribing provider prior to re-
29 newal of a prescription.
30
- 31 5. Procedures for medication dispensing, distribution,
32 administration, accounting and disposal; and
33
- 34 6. Maximum security storage and weekly inventory of
35 all controlled substances, syringes and needles.
36

37 Discussion: A formulary is a written list of prescribed
38 and non-prescribed medications stocked in the facility.
39 This does not restrict the prescribing of medications
40 generated by outside community health care providers.
41

42 Dispensing is the issuance of one or more doses of medi-
43 cation from a stock or bulk container. The dispensed
44 medication should be correctly labeled to indicate the
45 name of the patient, the contents and all other vital
46 information needed to facilitate correct patient usage
47 and drug administration.

1 Medication distribution is the system for delivering,
2 storing and accounting for drugs from the source of
3 supply to the nursing station or point where they are
4 administered to the patient.
5

6 Medication administration is the act in which a single
7 dose of an identified drug is given to a patient.
8

9 Accounting is the system of recording, summarizing,
10 analyzing, verifying and reporting the results of
11 medication usage.
12

13 Disposal involves destruction of the medication upon
14 discharge of the inmate from the facility or provid-
15 ing the inmate with the medication, in line with the
16 continuity of care principle. The latter procedure
17 is preferred. Further, when a facility uses the
18 sealed, pre-packaged unit dose system, the unused
19 portion can be returned to the pharmacy.
20

21 A controlled substance is a drug or other substance
22 that is subject to special controls due to its abuse
23 potential.

E. HEALTH RECORDS

The contents, form and format, confidentiality, transfer and retention of the health care records are covered in these standards, based upon practices in the jurisdiction.

1. ESSENTIAL STANDARD

151 - Health Record Format and Contents

- 1 At a minimum, the health record file contains:
- 2
- 3 The completed receiving screening form;
- 4 Health appraisal data forms;
- 5 All findings, diagnoses, treatments and
- 6 dispositions;
- 7 Prescribed medications and their administration;
- 8 Laboratory, X-ray and diagnostic studies;
- 9 Signature and title of each documenter;
- 10 Consent and refusal forms;
- 11 Release of information forms;
- 12 Place, date and time of health encounters;
- 13 Discharge summary of hospitalizations;
- 14 Health service reports (e.g., dental, psychiatric
- 15 and other consultations); and
- 16 Specialized treatment plan (if such exists).
- 17
- 18 The method of recording entries in the record and the form
- 19 and format of the record are approved by the health authority.
- 20
- 21 Discussion: The problem-oriented medical record
- 22 structure is suggested. However, whatever the re-
- 23 cord structure, every effort should be made to es-
- 24 tablish uniformity of record forms and content
- 25 throughout the correctional system. The record is
- 26 to be completed and all findings recorded includ-
- 27 ing notations concerning psychiatric, dental and
- 28 other consultative services.
- 29
- 30 A health record file is not necessarily established
- 31 on every inmate. However, any health intervention
- 32 after the initial screening requires the initiation
- 33 of a record. The receiving screening form becomes
- 34 a part of the record at the time of the first health
- 35 encounter. If an inmate is incarcerated more than
- 36 once, existing medical records should be re-activated.
- 37
- 38 Where patients are seen only at the physician's office,
- 39 the record generally is kept there. However, a form
- 40 for recording the disposition should accompany the in-
- 41 mate, so that the physician can provide instructions
- 42 regarding follow-up care.
- 43
- 44 Please refer to the AMA monograph "Health Care in
- 45 Jails: Inmates' Medical Records and Jail Inmates'
- 46 Right to Refuse Medical Treatment."

2. IMPORTANT STANDARDS

152 - Confidentiality of the Health Record

1 Written policy and defined procedures which effect the
2 principle of confidentiality of the health record require
3 that:

- 4
- 5 1. The active health record is maintained
6 separately from the confinement record
7 under lock and key; and
- 8
- 9 2. Access to the health record is controlled
10 by the health authority.

11
12 Discussion: The principle of confidentiality pro-
13 tects the patient from disclosure of confidences
14 entrusted to a physician during the course of treat-
15 ment.

16
17 Any information gathered and recorded about alcohol
18 and drug abuse is confidential under federal regula-
19 tions and cannot be disclosed without written consent
20 of the patient or the patient's parent or guardian
21 (see 42 Code of Federal Regulations Sec. 2.1 et. seq.)

22
23 The health authority should share information with
24 the facility administrator regarding an inmate's
25 medical management and security. The confidential
26 relationship of doctor and patient extends to in-
27 mate patients and their physician. Thus, it is
28 necessary to maintain active health record files
29 under security, completely separate from the pa-
30 tient's confinement record.

31
32
33 153 - Transfer of Health Records and Information

34
35
36 Written policy and defined procedures regarding the transfer
37 of health records and information require that:

- 38
- 39 1. Summaries or copies of the health record are
40 routinely sent to the facility to which the
41 inmate is transferred;
- 42
- 43 2. Written authorization by the inmate is necessary
44 for transferring health records and information
45 unless otherwise provided by law or administra-
46 tive regulation having the force and effect of
47 law; and

- 1
- 2 3. Health record information is also transmitted
3 to specific and designated physicians or medi-
4 cal facilities in the community upon the written
5 authorization of the inmate.

6
7 Discussion: An inmate's health record or summary
8 follows the inmate in order to assure continuity
9 of care and to avoid the duplication of tests and
10 examinations.

11
12 154 - Records Retention

13
14
15 Written policy and defined procedures require that inactive
16 health record files are retained according to legal require-
17 ments of the jurisdiction.

18
19 Discussion: Regardless of whether inactive health
20 records are maintained separately or combined with
21 confinement records, they need to conform to legal
22 requirements for records retention.

IMPORTANT STANDARDS

155 - Informed Consent

F. MEDICAL-LEGAL ISSUES

These two standards address the inmate's right to informed consent and the right to refuse treatment and guidelines for the inmate's participation in medical research.

1 All examinations, treatments and procedures governed by informed
2 consent in the jurisdiction are likewise observed for inmate
3 care. In the case of minors, the informed consent of parent,
4 guardian or legal custodian applies when required by law.

5
6 Discussion: Informed consent is the agreement by
7 the patient to a treatment, examination or pro-
8 cedure after the patient receives the material
9 facts regarding the nature, consequences, risks
10 and alternatives concerning the proposed treatment,
11 examination or procedure. Medical treatment of an
12 inmate without his or her consent (or without the
13 consent of parent, guardian or legal custodian when
14 the inmate is a minor) could result in legal compli-
15 cations.

16
17 Obtaining informed consent may not be necessary in
18 all cases. These exceptions to obtaining informed
19 consent should be reviewed in light of each state's
20 law as they vary considerably. Examples of such
21 situations are:

- 22
23 1. An emergency which requires immediate
24 medical intervention for the safety
25 of the patient;
- 26
27 2. Emergency care involving patients who
28 do not have the capacity to understand
29 the information given; and
- 30
31 3. Public health matters, such as communi-
32 cable disease treatment.

33
34 Physicians must exercise their best medical judgment in
35 all such cases. It is advisable that the physician docu-
36 ment the medical record for all aspects of the patient's
37 condition and the reasons for medical intervention. Such
38 documentation facilitates review and provides a defense
39 from charges of battery. In certain exceptional cases,
40 a court order for treatment may be sought, just as it
41 might in the free community.

42
43 The law regarding consent to medical treatment by juveniles
44 and their right to refuse treatment, varies greatly from
45 state to state. Some states allow juveniles to consent to
46 treatment without parental consent, as long as they are
47 mature enough to comprehend the consequences of their

1 decision; others require parental consent until majority,
2 but the age of majority varies among the states. The
3 law of the jurisdiction within which the facility is
4 located should be reviewed by legal counsel, and based
5 upon counsel's written opinion, a facility policy re-
6 garding informed consent should be developed. In all
7 cases, however, consent of the person to be treated is
8 of importance.
9

10
11 156 - Medical Research
12

13
14 Any biomedical or behavioral research involving inmates is
15 done only when ethical, medical and legal standards for
16 human research are met.
17

18 Discussion: This standard recognizes past abuses
19 in the area of research on involuntarily confined
20 individuals and stresses the protective measures
21 and prisoner/patient autonomy interests that must
22 be considered in a decision to include such persons
23 in clinical research.
24

25 There should be adequate assurance of safety to
26 the subject, the research should meet standards
27 of design and control and the inmate must have
28 given his/her informed consent.

G. APPENDIX

Glossary and Subject Index

GLOSSARY

- Accounting (Medications) Accounting is the system of recording, summarizing, analyzing, verifying and reporting the results of medication usage.
- Administrative Meetings Meetings are held at least quarterly between the health authority and the official legally responsible for the facility or their designees. At these meetings, problems are identified and solutions sought.
- Alcohol Detoxification (See "Detoxification")
- Annual Statistical Report The annual statistical report should indicate the number of inmates receiving health services by category of care as well as other pertinent information (e.g., operative procedures, referrals to specialists, ambulance service, etc.).
- Chemical Dependency Chemical dependency refers to individuals who are physiologically and/or psychologically dependent on alcohol, opium derivatives and synthetic drugs with morphine-like properties (opioids), stimulants and depressants.
- Chronic Care Chronic care is medical service rendered to a patient over a long period of time (e.g., treatment of diabetes, asthma and epilepsy).
- Clinic Care Clinic care is medical service rendered to an ambulatory patient with health care complaints which are evaluated and treated at sick call or by special appointment.
- Controlled Substance A controlled substance is a drug or other substance that is subject to special controls due to its abuse potential. There are five federally established schedules/categories of controlled substances.
- Convalescent Care Convalescent care is medical service rendered to a patient to assist in recovery from illness or injury.

- Dental Examination The dental examination should include taking or reviewing the patient's dental history and examination of hard and soft tissue of the oral cavity by means of an illuminator light, mouth mirror and explorer. X-rays for diagnostic purposes should be available if deemed necessary. The results are recorded on an appropriate uniform dental record utilizing a number system such as the Fédération Dentaire Internationale System.
- Dental Hygiene While dental hygiene by standard definition includes clinical procedures taken to protect the health of the mouth and chewing apparatus, minimum compliance will be instruction in the proper brushing of teeth.
- Detoxification Drug detoxification refers to the process by which an individual is gradually withdrawn from a drug by administering decreasing doses either of the same drug upon which the person is physiologically dependent or one that is cross-tolerant to it or a drug which has been demonstrated to be effective on the basis of medical research.
- Detoxification from alcohol should not include decreasing doses of alcohol; further, supervised "drying out" may not necessarily involve the use of drugs.
- Disaster Plan, Health Aspects Health aspects of the disaster plan, among other items, would include the triaging process, outlining where care can be provided and laying out a back-up plan.
- Dispensing, Medication Dispensing is the issuance of one or more doses of medications from a stock or bulk container. The dispensed medication should be correctly labeled to indicate the name of the patient, the contents and all other vital information needed to facilitate correct patient usage and drug administration.
- Disposal, Medication Disposal refers to the destruction of the inmate's medication upon his/her discharge from the facility, the return of sealed unused pre-packaged medications to the pharmacy or providing the inmate with the medication, in line with the continuity of care principle.

Distribution, Medication Distribution of medication is the system for delivery, storing and accounting for drugs from the source of supply to the nursing station or point where they are administered to the patient.

Documented Inmates' Health Complaints Examples of health complaints being documented are:

1. Some jails note on the complaint slip the action taken regarding triaging and file such slips in the inmate's medical record; and
2. Others use a log and record the complaint and its disposition.

Drug Detoxification (See "Detoxification")

Emergency Care (Medical, Dental and Mental) Emergency care is care for an acute illness or unexpected health care need that cannot be deferred until the next scheduled sick call or clinic.

Formulary A formulary is a written list of prescribed and non-prescribed medications used within the facility.

Four Basic Food Groups The four basic food groups are:

- Milk and milk products;
- Meats, fish and other protein foods (e.g., eggs, dried beans and peas and cheese);
- Breads and cereals; and
- Vegetables and fruits.

Health Administrator A health administrator is a person who by education (e.g., RN, MPH, MHA or related disciplines) is capable of assuming responsibilities for arranging for all levels of health care and assuring quality and accessibility of all services provided to inmates.

Health Appraisal Health appraisal is the process whereby the health status of an individual is evaluated. The extent of health appraisal, including medical examinations, is defined by the responsible physician, but does include at least the items noted in Standard 131.

Health Aspects (Disaster Plan) Health aspects of the disaster plan, among other items, include the triaging process, outlining where care can be provided and laying out a back-up plan.

Health Authority The health authority is the individual who has been delegated the responsibility for the facility's health care services, including arranging for all levels of health care and assuring quality and accessibility of all health services provided to inmates.

Health Care Health care is the sum of all action taken, preventive and therapeutic, to provide for the physical and mental well-being of a population. Health care, among other aspects, includes medical and dental services, personal hygiene, dietary and food services and environmental conditions.

Health Trained Staff Health trained staff may include correctional officers and other personnel without health care licenses who are trained in limited aspects of health care as determined by the responsible physician.

Hospital Care Hospital care is inpatient care for an illness or diagnosis which requires optimal observation and/or management in a licensed hospital.

Infirmary An infirmary is an area established within the correctional facility in which organized bed care facilities and services are maintained and operated to accommodate two or more inmates and which is operated for the express or implied purpose of providing skilled nursing care for persons who are not in need of hospitalization.

Infirmary Care Infirmary care is defined as inpatient bed care by or under the supervision of a registered nurse for an illness or diagnosis which requires limited observation and/or management and does not require admission to a licensed hospital.

Informed Consent Informed consent is the agreement by the patient to a treatment, examination or procedure after the patient receives the material facts regarding the nature, consequence, risks and alternatives concerning the proposed treatment, examination or procedure.

Large Muscle Activity Examples of large muscle activity include walking, jogging in place, basketball, ping pong and isometrics.

Medical Preventive Maintenance (See "Preventive Maintenance")

Medical Restraints (See "Restraints")

Medical Supervision/ Detoxification Medical supervision means that for in-jail alcohol and opioid detoxification, at a minimum, the inmate must be under 24 hour per day, 60 minutes per hour supervision of a health trained correctional officer working under a physician's direction. For detoxification from barbiturates and other sedative hypnotic drugs, the program in the jail must be under the 24 hour supervision of a licensed nurse at a minimum.

Medication Accounting (See "Accounting")

Medication Administration Medication administration is the act in which a single dose of an identified drug is given to a patient.

Medication Dispensing (See "Dispensing, Medication")

Medication Disposal (See "Disposal, Medication")

Medication Distribution (See "Distribution, Medication")

Monitoring of Services/ Internal Quality Assurance Monitoring is the process for assuring that quality health care services are being rendered in the facility by non-physician providers of health care. The monitoring is accomplished by on-site observation and review (e.g., studying inmates' complaints regarding care; reviewing the health records, pharmaceutical processes, standing orders, and performance of care).

Opioids Opioids refer to derivatives of opium, (e.g., morphine and codeine and synthetic drugs with morphine-like properties).

Peer Review Peer review is the evaluation by practicing physicians of the quality and efficiency of services ordered or performed by other practicing physicians. The American Medical Association Resolution 121 (A-76) on quality assurance passed by the AMA House of Delegates (1976) reads: "RESOLVED, That the American Medical Association endorse the principle that correctional facilities provide adequate medical care to their inmates which is subject to physician peer review in each community."

Planned, Supervised Basis (Exercising) Facilities meet compliance of exercise on a "planned, supervised basis" under the following conditions:

It is recognized that many facilities do not have a separate facility or room for exercising. The dayroom adjacent to the cell may be used for this purpose. The dayroom meets compliance if planned, programmed activities are directly supervised by staff and/or trained volunteers. Otherwise, the designated hour would not be different from any of the other hours of the day. Television and table games do not meet compliance.

Regarding the use of outside yards, gymnasiums and multi-purpose rooms, making available exercising opportunities (e.g., basketball, handball, jogging, running and calisthenics) does satisfy compliance even though inmates may not take advantage of them. While such activities may be more productive under the supervision of a recreational staff person, this is not required. For supervision purposes, inmates should be within sight or sound of a staff person.

Preventive Maintenance (Medical) Medical preventive maintenance refers to health promotion and disease prevention. This includes the provision of individual or group health education and medical services, such as inoculations and immunizations provided to take advance measures against disease and instruction in self-care for chronic conditions.

Prostheses Prostheses are artificial devices to replace missing body parts or compensate for defective bodily functions.

Psychiatric Personnel Psychiatric services staff are psychiatrists, general family physicians with psychiatric orientation, psychologists, psychiatric nurses, social workers and trained correctional counselors.

Public Advisory Committee The public advisory committee represents the local medical and legal professions and may include key lay community representatives. While grand juries and public health department inspection teams play an important role in advising jails in some communities, they are more official than "public" bodies.

The role of the advisory committee is to review the facility's program and advise those responsible. Such a monitoring process helps staff identify problems, solutions and resources.

Qualified Health Personnel Qualified health personnel are physicians, dentists and other professional and technical workers who by state law engage in activities that support, complement or supplement the functions of physicians and/or dentists and who are licensed, registered or certified as appropriate to their qualifications to practice; further, they practice only within their licenses, certification or registration.

Receiving Screening Receiving screening is a system of structured inquiry and observation designed to prevent newly arrived inmates who pose a health or safety threat to themselves or others from being admitted to the facility's general population and to rapidly get newly admitted inmates to medical care.

Responsible Physician The responsible physician is the individual physician who is responsible for the final decisions regarding matters of medical judgement.

Restraints (Medical) Medical restraints are physical and chemical devices used to limit patient activity as a part of health care treatment. The same kinds of restraints that would be medically appropriate for the general population within the jurisdiction are likewise to be used for the medically restrained incarcerated individual (e.g., leather or canvas hand and leg restraints, chemical restraints and straight jackets).

Self Care Self care is defined as care for a condition which can be treated by the inmate and may include "over-the-counter" type medications.

Sick Call Sick call is the system through which each inmate reports for and receives appropriate medical services for non-emergency illness and injury. Some people refer to "sick call" as a "clinic visit."

Skilled Nursing Care (See "Infirmary Care")

Special Medical Program The special medical program refers to care developed for patients with certain medical conditions which dictate a need for close medical supervision (e.g., seizure disorders, diabetes, potential suicide, chemical dependency and psychosis).

Standing Medical Orders Standing medical orders are pre-existing written medical orders for the definitive treatment of identified conditions and for on-site treatment of emergency conditions for any person having the condition to which the order pertains.

Supervision Supervision is defined as overseeing the accomplishment of a function or activity.

Treatment Plan A treatment plan is a series of written statements which specify the particular course of therapy and the roles of medical and non-medical personnel in carrying out the current course of therapy. It is individualized and based on assessment of the individual patient's needs and includes a statement of the short and long term goals and the methods by which the goals will be pursued.

AMERICAN HEALTH CARE CONSULTANTS JAIL HEALTH CARE ACCREDITATION PROGRAM

APPLICATION FOR ACCREDITATION OF MEDICAL CARE AND HEALTH SERVICES IN JAILS

INSTRUCTIONS FOR COMPLETING THE AHCC APPLICATION FOR ACCREDITATION UNDER
THE AMA STANDARDS FOR HEALTH SERVICES IN JAILS:

Some of the items on this questionnaire may not apply to your particular
facility. In such cases, please mark NA in the answer space.

Question 16 is for purposes of our information only. The answers we re-
ceive will be used in an evaluative context and will not affect the status
of your application in any manner.

1-1. Name of facility _____

1-2. Address of facility _____
City State Zip

1-3 Facility phone number () _____

1-4. Approximate population of area served by facility _____

2-1. Title of official legally responsible for facility _____

2-2. Name of official _____

2-3. Address of official _____
City State Zip

2-4. Phone number of official () _____

3-1. Year facility was built _____

3-2. Any major renovations? Yes _____ No _____

3-3. Year of renovations _____

3-4. Briefly describe _____

Number of admissions to facility in previous year

4-1. Adult males _____

4-2. Adult females _____

4-3 Juvenile females _____

4-4. Juvenile males _____

4-5. TOTAL ADMISSIONS _____

- 5-1. Design rated capacity _____
- 5-2. Average daily population for previous year _____
- 5-3. Average daily intake _____

In the previous year, what percent of your inmates would you estimate stayed:

- 6-1. Less than 24 hours _____ %
- 6-2. One day to a week _____ %
- 6-3. One to two weeks _____ %
- 6-4. Longer than two weeks _____ %

7-1. Are there any persons currently providing medical care to inmates of jail? Yes _____ No _____
If you answered yes, please complete the rest of Section 7, providing numbers and whether full-time or part-time.

- 7-2. Number of physicians hours/month: _____; Number of physicians: FT _____ PT _____.
- 7-3. Number of nurse hours/month: _____; Number of RNs: FT _____ PT _____.
Number of LPNs/LVNs: FT _____ PT _____.
- 7-4. Number of physician's assistant hours/month: FT _____ PT _____.
- 7-5. Hours/month provided by others (please specify type, e.g., EMTs): _____
- 7-6. Name of physician responsible for medical care: _____
- 7-7. Address of physician: _____
City State Zip
- 7-8. Phone number of physician: _____ () _____

- 8-1. Is regular sick call conducted by a trained medical person? Yes _____ No _____
- 8-2. How often is sick call held? _____
- 8-3. What level of staff performs sick call? _____

- 9-1. Does your facility have a medical examining room? Yes _____ No _____
- 9-2. Does your facility have any medical bed space? Yes _____ No _____

- 10-1. Does your jail do any routine screening for potential medical problems upon an inmate's arrival at your facility? Yes _____ No _____
If you answered yes, please complete the rest of Section 10.
- 10-2. Who performs this screening? _____
- 10-3. Exactly, when is this screening done? _____

11-1. Does your jail offer on-going medical services or just emergency medical treatment? On-going _____ Emergency only _____

11-2. If you answered "On-going," where are they provided? In jail _____
Other _____ Describe: _____

11-3. What type facility provides emergency services? _____

12-1. Does your jail offer on-going mental health services or just emergency mental health treatment? On-going _____ Emergency only _____

12-2. Describe type of facility which provides psychiatric in-patient services: _____

12-3. Describe type of agency which provides outpatient mental health services: _____

13-1. Does your jail offer on-going dental services or just emergency dental treatment? On-going _____ Emergency only _____

13-2. Where are they provided? In jail _____ Other: _____ Describe: _____

14-1. Does your jail offer medically supervised alcohol detoxification? Yes _____ No _____ (If no, go to 15-1.)

14-2. If you answered yes to 14-1, does the jail itself provide these services? Yes _____ No _____

14-4. If you answered no to the question immediately above, what type of agency/facility does the detoxification? _____

15-1. Does your jail offer medically supervised drug detoxification? Yes _____ No _____ (If no, go to 16-1.)

15-2. If you answered yes to 15-1, does the jail itself provide these services? Yes _____ No _____

15-3. If you answered no to 15-2, is withdrawal done without medical help? Yes _____ No _____

15-4. If you answered no to the question immediately above, what type of agency/facility does the detoxification? _____

16-1. Have there been any law suits against your jail within the past five years where the adequacy of the health care services offered was an issue? Yes _____ No _____

If you answered yes, please complete the rest of section 16.

16-2. Is your jail currently under such a suit? Yes _____ No _____

16-3. If yes to 16-2, when was the suit filed? (Month & Year) _____

17. What types of benefits do you think your jail would derive from being in the health care program?

18. Do you think you would have much difficulty in getting your medical staff to assist you with changes in the jail's health care system if this proved necessary in order to meet the AMA's Standards?

19. If improving the health care in your jail required an increase in the jail's medical budget, would you be willing to go to the funding body and request the additional funding?

20. If you are unable to provide information on the cost of current medical care, are you willing to help obtain this information and develop records to reflect future changes?

I HEREBY APPLY TO THE AMERICAN HEALTH CARE CONSULTANTS FOR ACCREDITATION OF MEDICAL CARE AND HEALTH SERVICES OF THE FACILITY FOR WHICH I AM LEGALLY RESPONSIBLE. IF ACCEPTED, I RECOGNIZE THAT IN ORDER TO KEEP ACCREDITATION IN FORCE, THE FACILITY'S HEALTH CARE PROGRAM MUST BE MAINTAINED ACCORDING TO THE AMA STANDARDS DURING THE ACCREDITATION PERIOD.

Signature _____ Title _____ Date _____

NOTE: Application should be accompanied by check in the amount of \$25 made payable to: American Medical Association Education and Research Foundation and mailed to:

American Health Care Consultants, Inc.
Suite 2902-B, 333 E. Ontario St. Chicago, Illinois 60611

END
