## P R E F A C E

Prior to 1981, the data processing requirements of the Department for Human Services were handled by the City Management Information Services. During 1981, a major change in the data collection system of DHS took place. DHS's current data processing is being done by the Office of Research and Planning under a timesharing agreement with the Human Services Coordination Alliance.

This major shift in procedures caused this report to be delayed. We apologize for its lateness, but look forward to the future and the increased data processing capacities that the new arrangement provides.

In addition, a special thanks goes to the DHS staff who provide the data required by the information system. Their efforts to accurately and completely record the information are crucial to the validity of this report.

## INTRODUCTION

The following report provides information concerning the Department for Human Services (DHS) of Jefferson County. Part One examines the types of referrals which were made to the Juvenile Session of District Court and also presents data on the services provided to juveniles by DHS.

The flow chart depicted on the following page illustrates in a simplistic fashion the Juvenile Justice System. This flow chart was used as an outline in writing this report. It must be kept in mind that the chart has been simplified to portray the basic options available at any given point in the system. As each case is unique, it would be impossible to portray all of the conceivable options.

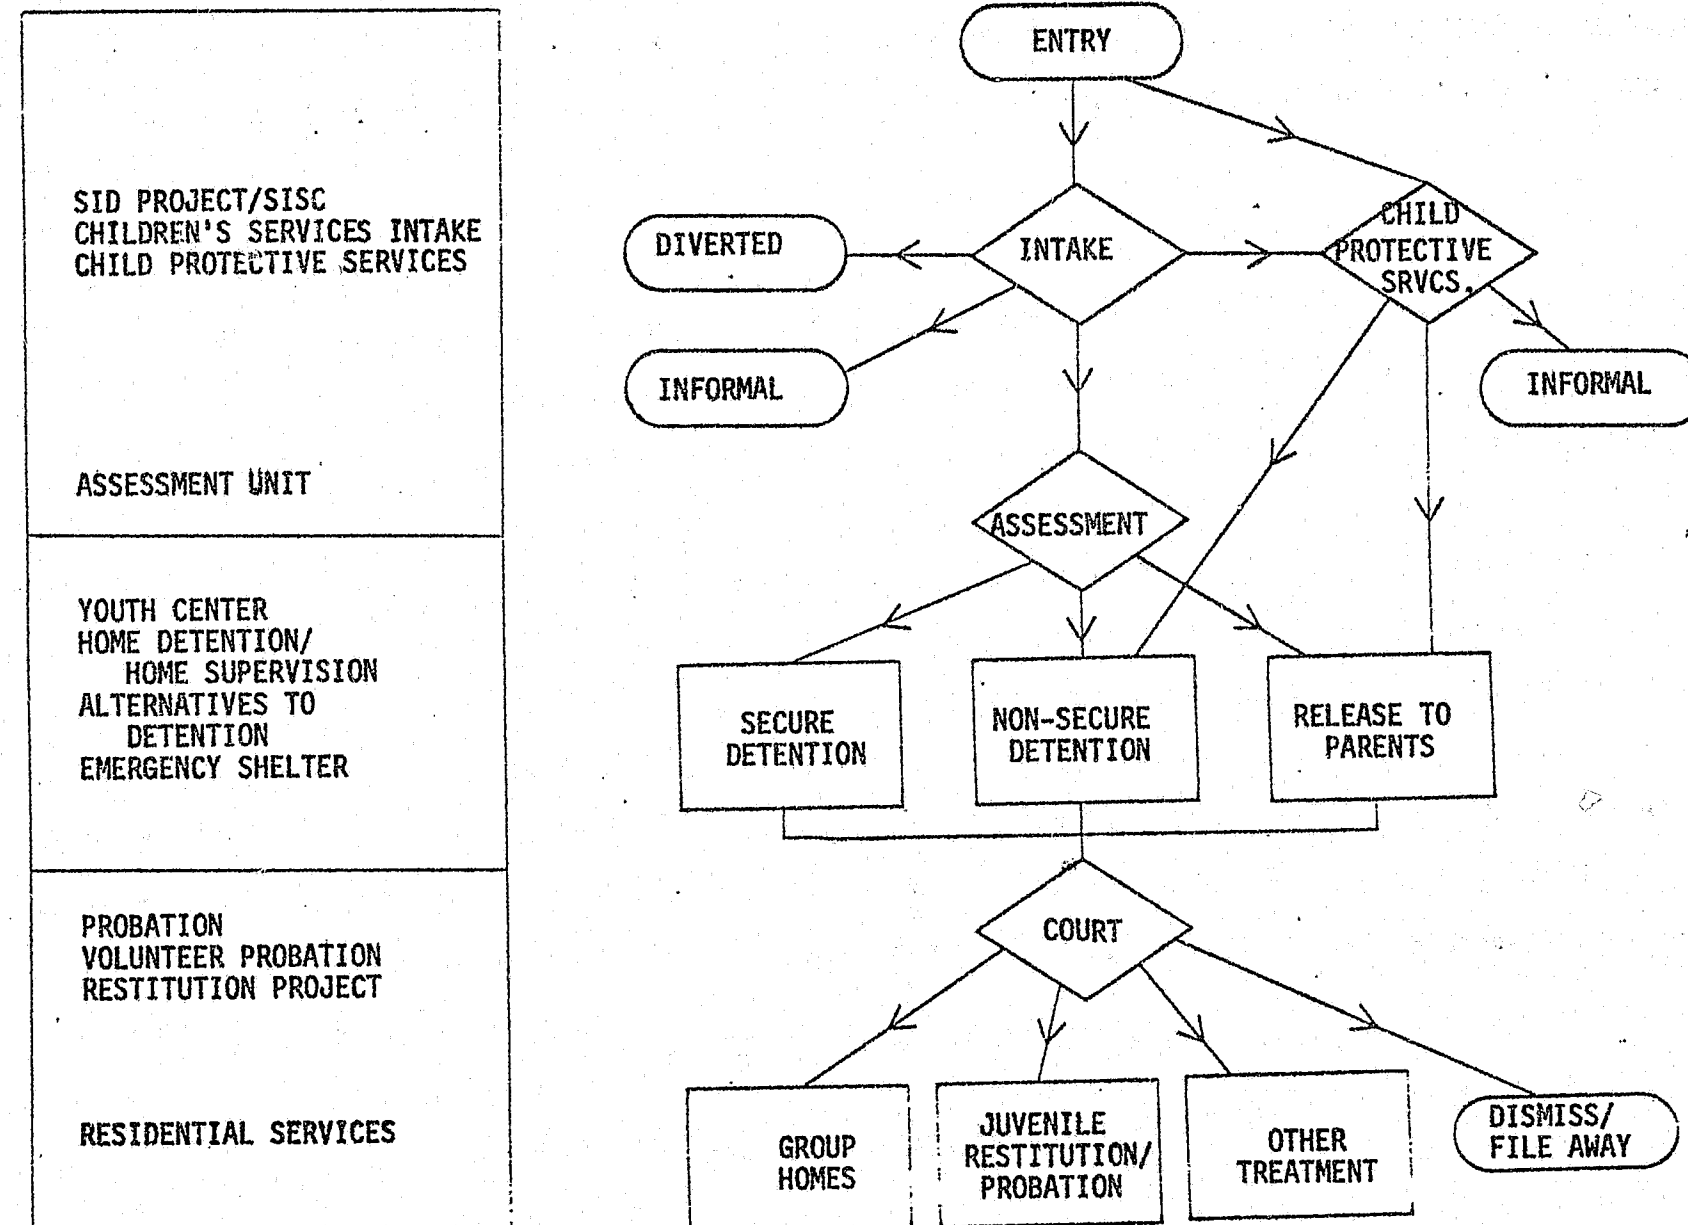

The Juvenile Court Intake Form was the source of most of the information presented in Part One. The data for 1980 were compiled and tabulated using the Statistical Package for the Social Sciences (SPSS) program. The Child Protective Services information was gathered through the Protective Services Intake Forms which were keypunched, compiled, and tabulated using SPSS. This report contains only the most frequently requested Juvenile Court and Protective Services information. If needed, further data are available through the Office of Research and Planning of DHS.

Part Two of the report presents information on the services provided by the Financial Assistance Department and the Nutrition Program for the Aging. The Welfare Stat Sheet and the Financial Assistance Vouchers were the sources for the computerized Financial Assistance data which were compiled in monthly reports.

## PART ONE: JUVENILE SERVICES

### Section I. Juvenile Justice System

The Juvenile Justice System in Kentucky is defined and regulated by Chapter 208 of the Kentucky Revised Statutes. The majority of individuals regulated by Chapter 208 are juveniles, that is, persons under the age of eighteen. Others under the jurisdiction of this Chapter, however, are adults charged with non-support, paternity, endangering the welfare of a minor, or unlawful transaction with a minor.

In Jefferson County, the Department for Human Services (DHS) which is administered by the County Judge/Executive, provides services for the Juvenile Session of District Court. The Juvenile Session of District Court (hereinafter referred to as Juvenile Court) is a part of the Kentucky Court of Justice-District Court Division.

In 1980, there were 7,285 referrals to Juvenile Court, representing 5,384 individuals. (The individual total counts each juvenile once, whereas the referral total counts the juvenile as many times as contact was made with the system during the given year.) See Section II, Page 21 for further data on the individuals and referrals to Juvenile Court in 1980.

#### YOUTH CENTER

The Jefferson County Youth Center serves as a primary point of entry into the Juvenile Justice System. The Youth Center exists to provide a secure setting for youth who are active before Juvenile Court. These are youth who have been charged with the commission of a public offense and who are believed to be either a danger

to themselves or to the community and in need of such a secure environment.

The current detention policy is that all juveniles are to be considered for mandatory release except those who meet the following criteria:

1. Those youth arrested for Class A and B felonies.
2. Those youth arrested for Burglary only under the provisions of KRS 511.020(B), which states:  
"In a building, and in effecting entry or while in the building, or in the immediate flight therefrom, he or another participant in the crime:
  - a. is armed with explosives or a deadly weapon; or
  - b. causes physical injury to any person who is not a participant in the crime; or
  - c. uses or threatens the use of a dangerous instrument against any person who is not a participant in the crime."
3. Those youth delivered to the Jefferson County Youth Center by Order of Detention from the Jefferson District Court.
4. Those youth with outstanding Bench Warrants captioned "Do Not Parole" or "No ATD."
5. Those youth arrested and found within the purview of the provisions of the Interstate Compact on Juveniles (out-of-state youth with wants or warrants) including those Jefferson County youth being returned under the provisions of the Interstate Compact on Juveniles.
6. Any youth arrested on a public offense whose parent/legal guardian/custodian refuses to pick up will be held for arraignment.
7. Any transient youth (residing outside of Jefferson County) arrested for any public offense will be held for arraignment.

During 1980, the average daily population of those held in secure detention was 32.6 youths. (See Section III, Page 60 for further information on detention).

At the Youth Center, the juvenile may be released to his/her parents or to a non-secure setting. The following non-secure detention programs and placements are available: The Alternative to Detention Program, Home Detention/Home Supervision, Phoenix House and the Emergency Shelter Program.

#### ALTERNATIVE TO DETENTION

The Alternative to Detention Program (ATD) has been in operation since 1972 for the purpose of coordinating the care and supervision of children who do not need the secure supervision provided at the Youth Center. Private individuals and group-care facilities such as Boys Haven, and Shelter House I and II are utilized to provide care for children in the program.

The criterion for accepting a youth into ATD is that the youth be a status offender. Status offenses are those which would not be criminal if committed by an adult such as Runaway, Truancy, and Ungovernable Behavior. Referrals to ATD are made by Juvenile Court Judges and/or admissions workers at the Youth Center. In 1980, the ATD program served 684 juveniles, with an average daily population of 26.5. (See Section III, Page 61 for further data on the ATD Program).

#### PHOENIX HOUSE

The Phoenix House Program is an Alternative to Detention group home for male and female status offenders who would otherwise be held in secure detention. Referrals to Phoenix House can come directly from admission workers at the Youth Center or from Juvenile Court. The average daily population during the year was 7.4 juveniles.

#### HOME DETENTION/HOME SUPERVISION

Home Detention/Home Supervision is a non-secure program designed to remove from secure detention those juveniles who can be released to their own homes if intensive supervision of the child and supportive services to the parents can be provided. This program of Home Supervision is designed for older, more sophisticated youth having extensive prior court records, or for those facing a serious current charge who would not otherwise be released from secure detention. Normally, referrals are made to Home Detention/Home Supervision only by the Court, following a detention hearing.

Home Detention as a separate program ended in June of 1980, but was replaced by a similar program of Home Supervision provided by Assessment workers through the Assessment Unit. In 1980, a total of 234 juveniles were placed on either Home Detention or Home Supervision.

#### EMERGENCY SHELTER

The Emergency Shelter/Homefinding Program has two basic functions: 1) to recruit, evaluate, approve, train, supervise, and monitor individual and group care resources which are used to provide DHS with emergency short-term, substitute family care for youth needing ATD or Emergency Shelter Placement; and 2) to arrange Emergency Shelter Placements of dependent children who are active with Juvenile Court, by screening and monitoring referrals to the Home of the Innocents, and arranging placements in the community for those referrals the Home is unable to accept. Effective July 1, 1980, the Emergency Shelter Placement component of Homefinding was transferred to Child Protective Services. In 1980, a total of 480 children were placed in Emergency Shelter. (See Section III, Page 62 for further information on the Emergency Shelter/Homefinding Program).

#### CHILDREN'S SERVICES INTAKE

Children's Services Intake (CSI) serves as the first agency contact for many children. CSI serves as a screening, information and referral program for complaints regarding children who have been charged with a status or public offense. CSI processes cases from a variety of sources including the Police Departments, community agencies, schools, hospitals, churches, and the general public. For certain walk-in cases, such as some neighborhood complaints and other referrals from the community, the case is diverted from the Juvenile Justice System. In these cases no record of the offense is kept. In 1980, 1,019 cases were handled in this fashion.

The Youth Services Program was another DHS program designed to divert first offenders and misdemeanor offenders from the Court system. Before being phased out in June of 1980, the Youth Services Program served 359 juveniles.

Most status offense cases (Runaway, Truancy, Ungovernable Behavior) were referred to either the Status Intake Diversion Project (SID) or the Specialized Intervention Services for Children (SISC) program. The federally funded SID Project was also phased out in June of 1980, after having served 158 juveniles during the year. The SISC Program which replaced the Youth Services and SID functions began operation in July of 1980. During the last half of the year, 230 mostly status offender juveniles were referred to SISC. Those cases which come to CSI involving dependency, neglect, or abuse are referred to the Child Protective Services program.

#### CHILD PROTECTIVE SERVICES PROGRAM

The Child Protective Services Program receives reports and conducts investigations of alleged child abuse and neglect and provides services to families in which abuse/neglect occurs. Reports alleging child abuse/neglect are generated by the police, other social agencies, programs within DHS, citizens who come directly to the Program's main office, and through the 24-hour Child Abuse Hotline. The Program also investigates marriage requests of minors. Services provided by the Program include counseling, short-term financial assistance, temporary placements for children, and referrals to community-based resources which can assist families where abuse/neglect has harmed or threatened harm to children. When necessary, the Juvenile Court is used by Child Protective Services to protect the rights and welfare of children. In 1980, there were 7,813 individuals representing 2,312 families referred to the Child Protective Services Program. (See Section III, Pages 63 to 68 for further data on cases served by Child Protective Services ).

#### EXPLOITED CHILD UNIT

Cases which involve allegations of child prostitution and/or child pornography are referred to the Exploited Child Unit (ECU). The ECU was created in July, 1980 to: 1) detect and investigate cases of youth in Jefferson County who are at-risk of being or actually are endangered by adults in child prostitution and/or child pornography, and 2) to assist the appropriate law enforcement agency in its criminal investigation of such adult sexual exploitation of children. The ECU does not accept case responsibility but functions as a fact-finding support service. The ECU does not accept referrals of child abuse or neglect, but does accept referrals of child-victims of sexual exploitation usually where there is commercial criminal involvement and

where the parties are outside of the family.

In the six months that the ECU was operational in 1980, there were 252 referrals to the unit which resulted in 154 investigations. (See Section III, Page for further data on the ECU cases).

Many minor cases are handled informally at the point of the initial interview in Children's Services Intake. In 1980, these informal cases numbered 2,335. (Additional data on the informal cases is included with the Juvenile Court Data in Section II, Page 69).

#### ASSESSMENT

When an offense is of a serious nature, requires legal action, or is charged to an habitual offender, CSI sends the case to the Assessment Unit for formal court action. The Assessment Unit is responsible for the processing of all formal delinquency and status offense court cases. The Assessment worker is responsible for each case as it proceeds through the court processes of arraignment, detention hearing, pre-trial conference, trial, and disposition. More specifically, this unit enables the Court to be knowledgeable concerning social information and the alternatives appropriate for each case at the time of disposition, thus allowing the Court to make decisions based on the individual merits of each case. In 1980, 4,950 cases (67.9%) were handled formally. (Considerable additional data on the cases referred and processed through Juvenile Court is contained in Section II).

#### PSYCHOLOGICAL SERVICES

During the time of court processing, many juveniles are referred to the Psychological Services Program for testing and evaluation. Cases referred to Psychological Services by the Court receive top priority in testing,

but other divisions of DHS may also refer juveniles to this program. Services provided by the program include psychological testing for I.Q., personality factors, and visual-motor integration. The program also has a psychiatrist available part-time for consultations and counseling. Findings and recommendations are made to aid in the selection of the most appropriate treatment program for the individual. The Psychology Program handled 740 cases in 1980. (See Section III, Page 70 for further information on the cases served by the Psychological Services Department).

The last step in the court process is the dispositional hearing. At this hearing, the Judge reviews the case and decides the treatment, if any, that would be in the best interest of the child. Among the dispositional alternatives available, many are administered by DHS.

#### PROBATION

One of the frequently used dispositions is Probation. The major focus of the DHS Probation Program is to help the adjudicated delinquent and his family solve their problems through the improvement of their capacity toward independent social functioning. Casework, group work, social adjustment services, and referral to other community resources when appropriate, are all utilized to strengthen and support the individual and family system. This is based on the premise that more realistic treatment can be provided for the youth and the family if the youth remains in the community rather than being removed from it. The overall goal of probation is to minimize the incidence of acts of juvenile delinquency perpetrated against the community and to prevent the youth from having further contact with the Court. In 1980, 175 juveniles were placed on Probation to DHS. (See Section III, Page 71 for further data on juveniles placed on probation).

#### INTENSIVE PROBATION

The Intensive Probation Program is another treatment alternative. The Intensive Probation Program began with a federal grant in 1978. Federal funding ended in December, 1980. The overall goal of Intensive Probation is to provide intensive supervision in the community for high risk offenders as an alternative to institutionalization. A total of 47 youthful offenders were placed in the Intensive Probation Program in 1980. (See Section III, Page 71 for further information about those committed to Intensive Probation).

#### VOLUNTEER PROBATION

The Volunteer Probation Program exists to provide an individualized, cost-effective alternative to the traditional probation experience by utilizing non-salaried staff to serve as volunteer probation officers for adjudicated delinquents. Volunteers are trained to provide general counseling and support services to the delinquent and his family which will aid in the adjustment of the youth to his community. The volunteer is assigned to only one case at a time, and is responsible for the casework, monthly reports, and court appearances of the juvenile. The probation continues until the child is recommended to the Court to be released from this type of probation. The VPO, the child, or a family member can make such a recommendation. In 1980, there were 72 Court referrals assigned to the program. (See Section III, Page 72 for additional information on the youths placed by the Court in the Volunteer Probation Program).

#### RESTITUTION PROGRAM

Restitution is a dispositional alternative which has been utilized by Juvenile Court for years. However, a formalized Juvenile Restitution Program funded by a discretionary Law Enforcement Assistance Administration

grant began taking referrals in March, 1979. The major purpose of the Juvenile Restitution Program is to help offenders become aware of the consequences of their acts, making them more accountable and responsible and less likely to commit new offenses. The program also provides the victims with full or partial reimbursement for the damages they have suffered. During 1980, a total of 212 juveniles were placed in the Restitution Program. (See Section III, Page 72 for additional data on the Restitution Program. See also The Juvenile Restitution Program: Final Evaluation to be published by the Office of Research and Planning in December, 1981).

#### RESIDENTIAL SERVICES

DHS also operates a group home program known as Residential Services for those juveniles needing care in a residential setting. This program consists of three phases. During the first phase, the juvenile is placed in an orientation/evaluation group home for the purpose of evaluating the treatment needs of the youth and also familiarizing the youth with the expectations, rights, and responsibilities of group home living. The second phase of the program involves assignment of the child to the specific group home which can best suit his/her needs. The third phase of the program involves aftercare during which the youth's adjustment to his own home and community is supervised. In 1980, a total of 154 youths were committed to the program. Residential Services also included two federally funded group homes called Merit House and DATA House. The Merit House and DATA House programs were funded for the purpose of removing status offenders from institutions. The Merit House group home which was for females was closed in June of 1980. (See Section III, Page 73 for additional data on youths placed in Residential Services).

After the Judge has issued a disposition, the case can be brought back into Court for review, to change the previous disposition, to release the child from probation, to examine a violation of probation or to study

the child's behavior to see if the stipulations issued by the Court at the dispositional hearing were followed. Upon successful completion of the designated treatment program, the child is normally released to his parents, placed with other relatives, or provided a foster care living arrangement.

At this point, the juvenile leaves the Juvenile Justice System. However, the juvenile's case record will remain in the active file until he reaches the age of eighteen or until the record is sealed by an order of a District Court Judge.

## Section II. Referrals to Juvenile Court

The total number of referrals to Juvenile Court decreased by 5.9 percent in 1980 as compared to 1979. There was a decrease in referrals among all of the sex/race categories with the largest percentage decrease for white females, down by 9.1 percent. The overall ratio of males to females has remained virtually unchanged over the last five years. On the average, each juvenile was charged with 1.4 offenses during the year.

Referrals to the Juvenile Court come from a variety of sources but primarily either the City or County Police. Compared to 1979, however, referrals from the City Police, County Police, and Merchant Police all decreased while the number of referrals from all of the other sources increased.

The five most common reasons for referral were: 1) Burglary, 2) Theft Under \$100 (often shoplifting), 3) Alcohol/Drunk Violation, 4) Theft Over \$100, and 5) Disorderly Conduct.

For males of both races, the major reason for referral was Burglary with 17.6 percent for white and 16.7 percent for blacks. The second and third most frequent reasons for referral were Alcohol/Drunk Violation (13.8%) and Disorderly Conduct (7.5%) for whites, and Theft Under \$100 (11.0%) and Theft Over \$100 (10.7%) for blacks.

For both black and white females, the most common reason for referral was Theft Under \$100, with 18.4 percent for white and 18.6 percent for black females. The second and third most frequent reasons for referral were Runaway (15.2%) and Neglected Child (8.0%) for white females, and the reasons of Neglected Child (16.1%) and Temporary Custody (10.2%) for black females.

Table 4 groups offenses by the FBI Crime Classification and compares referrals for 1979 and 1980. In comparison to 1979 data, the greatest percentage increases were in Auto Theft (122.2%), Marriage Requests (60.0%), and Forgery (42.9%), while the highest percentage decreases were for Homicide (66.7%), Other (56.3%), and Sex Offenses (38.7%). It should be noted that none of these categories which experienced substantial percentage changes actually involve large numbers of referrals.

Another classification can be used to divide offenses into the categories of Major Property, Minor Property, Physical Harm-Persons, No Physical Harm-Persons, Substance Offense, Social Control, Status and Child Protective Services.<sup>1</sup>

Using this classification (see Figure 2), only the Child Protective Services category experienced an increase in referrals as all of the other classifications decreased. The largest drop was in Minor Property offenses.

<sup>1</sup>Major Property: Burglary, Criminal Mischief, Arson, Theft Over \$100, Knowingly Receiving Stolen Property Over \$100, Forgery-1st & 2nd Degree.  
Minor Property: Possessing Burglary Tools, Criminal Trespass-1st & 2nd Degree, Criminal Mischief-2nd & 3rd Degree, Theft Under \$100, Knowingly Receiving Stolen Property Under \$100, Auto Theft, Forgery-3rd Degree.  
Physical Harm-Persons: Murder/Manslaughter, Assault-1st, 2nd & 3rd Degree, Robbery, Rape, Felonious Sex Offense.  
No Physical Harm-Persons: Wanton Endangerment-1st & 2nd Degree, Unlawful Imprisonment-1st & 2nd Degree, Menacing, Terroristic Threat, Sex Offenses, Carrying Concealed Deadly Weapon.  
Substance Offense: Narcotic (Schedule I), Trafficking (Schedule I,II,III), Controlled Substance Violation, Marijuana Violation, Improper Use of Solvents, Alcohol/Drunk Violation.  
Social Control: Disorderly Conduct, Criminal Trespass-3rd Degree, Loitering, AWOL from Facility, Traffic Offense, False Alarms, Neighborhood Complaint, Other.  
Child Protective Services: Marriage Request, Abused Child, Neglected Child, Sexual Abuse, Temporary Custody.  
Status: Runaway, Truancy, Ungovernable Behavior.

Total  
Referrals

Figure 2.

TYPE OF OFFENSE BY YEAR

The number of referrals by month is presented in Table 5. September (10.0%) and October (9.4%) had the most referrals while February (7.3%) and June (7.3%) had the fewest referrals.

Figure 3.

As can be seen in Figure 3, the percentage of cases handled formally in the Court system was at the highest level of any of the past six years. In actual numbers, formal cases increased from 4,921 in 1979 to 4,950 in 1980, while the number of informals declined from 2,821 in 1979 to 2,335 in 1980. Over two-thirds of the cases referred to the Court system in 1980 received formal handling.

\*These figures do not reflect those cases diverted from the Juvenile Justice System by Children's Intake, Youth Services or Specialized Intervention Services for Children.

As in the past, black referrals were more often handled formally than white referrals. The number of pre-history referrals has a large influence in determining whether a case will be handled formally or informally. While only 42.5 percent of first offenders received formal handling, over 90 percent of those cases with eleven or more total referrals were handled formally.

Figure 4.

Figure 5.

FORMAL CASES BY  
ADJUDICATORY DISPOSITIONS (GROUPED)

Figure 6.

Of those cases which were handled formally by the Court, about half were filed away with leave (F.A.W.L.). The F.A.W.L. category includes those which were dismissed and those referred for an informal adjustment.

Restitution, which was utilized in 8.9 percent of the formal cases, was the most widely ordered treatment disposition.

Figure 7.

Figure 8.

Figures 7 to 11 and Tables 7 to 11 describe the general demographic characteristics of the juveniles referred to the juvenile justice system in 1980. First offenders accounted for well over half (55.6%) of the total individuals referred to Court. Slightly less than one in ten of the juvenile individuals had a history of six or more total referrals. As in past years, females were more likely than males and whites were more likely than blacks to be first offenders. White females were the most likely and black males the least likely to be first offenders.

The mean age of the juvenile individuals was 13.8 years which was somewhat younger than in previous years. The lower mean age is indicative of the increase in the number of Child Protective Service cases which reached the Court system. On the average, blacks were approximately one year younger than whites while females were more than a year younger than males. By far, white males were the oldest of the groups with an average of 14.6 years while black females were the youngest with a mean of 11.9 years.

Only about one-third of the juveniles were living with both natural parents while a somewhat higher percentage of the youths resided with their mothers only (37.2%). Blacks were much more likely to be living with mother only (56.7%) while the tendency for whites was to live with both parents (39.9%). The white individuals referred to Juvenile Court tended to come from smaller families than the blacks.

Only two-thirds of the referred juveniles resided in households where the head of the household was employed.

As in previous years, the families of black juveniles were more likely to be on the low end of the income scale and less likely to be on the high end of the scale than the families of white juveniles. However, since income information is one of the most difficult items to collect, the large number of unknowns (52.7%) can distort the statistics. Nevertheless, for those families where income informa-

EMPLOYMENT STATUS  
OF HEAD OF HOUSEHOLD

Figure 9.

tion was available, the mean income for whites was more than two-thirds greater than that of blacks.

Another indication of the economic status of a juvenile's family is whether or not the family is receiving public assistance at the time of referral. More than one in five of the juveniles resided in a family receiving state assistance. The percentage of black juveniles in families receiving state assistance was nearly three times that of whites.

Three-fourths of the juveniles were still enrolled in school at the time of referral to Court, while 15.2 percent had withdrawn. Black juveniles were less likely to have dropped out of school.

Figure 11.

In 1968, 15 Planning Service Communities (PSC) were established in Jefferson County for the purpose of long-term planning and more efficient service distribution. Tables 12 to 16 present data on referrals to the juvenile justice system by the various PSC's while Tables 17 and 18 are based on individuals. Pages to present in summary form statistical profiles of each community.

The majority of the referrals from inner-city communities were black, except for the Downtown West (PSC-2) and Old Louisville (PSC-8) communities. In all of the other communities, whites far outnumbered blacks. Increases in referrals from 1979 to 1980 took place in only four communities. The largest numeric and percentage increase occurred in the South Central Community (PSC-10). The only community to experience an increase in referrals in both 1978-79 and 1979-80 was the Village West-Central Business Community (PSC-3). The greatest numeric decrease in referrals from 1979-80 was in the East End Community (PSC-12), while the communities of Shively-Hunter's Trace (PSC-10), East Algonquin (PSC-7), and Park DuValle (PSC-5) also had decreases in referrals in excess of ten percent.

First offenders accounted for over half of the referrals in only the Eastern Outer County (PSC-14) and the Northeastern Outer County (PSC-15). The East Algonquin Community (PSC-7) had the lowest rate of first offenders.

As usual, juveniles living in the city were referred more often by the City Police and those residing outside the city were referred more frequently by the County Police.

In general, referrals from the inner city received formal handling at a much higher rate than those from outside of the inner city. Over three-fourths of those from PSC's 1 through 8 were handled formally. The highest rates of informal handling occurred for those residing in the Eastern Outer County (PSC-14) and the Northeastern Outer County (PSC-15).

The juveniles residing in the city tended to be younger than those residing in the other communities. Nearly one-third of those from the Downtown East Community (PSC-4) were ten or younger while such was the case for less than ten percent of those from the East End (PSC-12), the Eastern Outer County (PSC-14), and the Northeastern Outer County (PSC-15).

The percentage of juveniles residing in families receiving public assistance varied greatly from community to community. Those residing in the inner city were generally more likely to be receiving assistance. Those from the East Algonquin Community (PSC-7) had the highest rate of receiving assistance (61.7%) while those from the Northeastern Outer County (PSC-15) had the lowest rate (5.2%).

### Section III. Program Profiles

The Department for Human Services was established January 1, 1978, by a resolution of the Jefferson County Fiscal Court.\* The agency provides the necessary social services that meet the human needs of the community. A wide variety of services are available within the Department for Human Services for the community: e.g. Emergency Assistance for families in crisis, Aging and Handicapped, programs for juveniles and Child Protective Services. This section contains detailed information on the various programs for juveniles operated by DHS including Child Protective Services.

---

\*The Department for Human Services was previously known as Metropolitan Social Services Department.

Mean Age		8.1		5.5		6.8		8.5		7.9		8.3		7.6

In 1980, the Emergency Shelter provided shelter to 480 children which represents a 45 percent increase over 1979. The number of males and females cared for in Emergency Shelter was about equal. The females served by Emergency Shelter tended to be older than the males.

#### CHILD PROTECTIVE SERVICES

In 1980, there were 7,813 individuals representing 2,312 families referred to Child Protective Services.

While the number of individuals referred to Child Protective Services increased by 3.4 percent from 1979 to 1980, the number of families was 2.6 percent higher.

The number of families referred to Child Protective Services was highest in July and August, while December, February and January were low months. Referrals were more than twice as high in July as in December. The unusual weather pattern of persistent record high temperatures in July and August of 1980 could have been a factor in the number of Child Protective Services referrals in those months.

About one-fourth of the persons were referred for Physical Neglect while Physical Abuse referrals represented 17.5 percent of the total. Referrals for Physical Abuse were 22 percent higher in 1980 than 1979 while Physical Neglect referrals declined somewhat. Referrals for Abuse: Gross Neglect, while still not numerous, did increase greatly from 1979 to 1980 while Emotional Neglect referrals decreased substantially.

As in previous years, more families were referred to Protective Services by a Neighbor/Friend than any other source. Also, the greatest change from previous years was the increase in referrals from a Neighbor/Friend.

\*Less than .1 percent

Overall, in 1980 females accounted for 57.6 percent of the total persons referred for Protective Services. However, if the number of individuals referred for Other (which includes siblings and parents) is excluded, then the ratio of males to females is about half and half. Males were referred as victims of physical abuse more frequently than females, while females were much more likely to be referred as victims of sexual abuse than males. In general, the reasons referred for blacks and other minorities were in similar proportions to the reasons whites were referred. The most notable difference was that blacks were much more likely than whites to be referred for Abandonment.

Generally, the number and percentage of referrals from the various planning Service Communities have not varied a great deal over the last three years. The largest number of referrals was from the mid-southern part of the county, specifically, Middle Outer County (PSC-13), Southwestern Outer County (PSC-11), and South Central (PSC-10).

#### EXPLOITED CHILD UNIT

In the last six months of 1980 when the program was operational, the ECU received 252 referrals. Slightly more than one-third of the referrals came from the Information Line while another third of the referrals were made from other units of DHS.

Of the 154 cases investigated, about 40 percent were substantiated and referred to the appropriate law enforcement agency. In slightly more than one fourth of the cases the allegations of exploitation were unfounded.

### PSYCHOLOGICAL SERVICES

In 1980, the Psychological Services Department provided services to a total of 740 cases which represents a 6.3 percent increase over 1979. While the number of cases handled by a psychologist was virtually unchanged from 1979 to 1980, the number of cases seen by the psychiatrist more than doubled from 24 cases in 1979 to 66 cases in 1980. The Assessment Department referred more than one-third and the Orientation Group Homes more than one-fourth of the cases seen by the Psychological Services Department.

### PROBATION

Of the 1980 referrals, a total of 175 juveniles were placed on probation to DHS which was 16.3 percent fewer than in 1979. Compared to 1979, the number of status offenders placed on probation increased by 77.8 percent.

Table 30. Probation Referrals by Reason Referred (Grouped)

Social Control	4	8.5
Status Offense	3	6.4
TOTAL	47	100.0

During 1980, 47 juveniles were placed on Intensive Probation which was one more than in 1979. Over three-fourths of those placed on Intensive Probation were charged with either a Major Property or Minor Property offense.

In 1979, twelve (26.1%) of those placed on Intensive Probation had been charged with a Physical Harm Against Persons offense, while in 1980, only two (4.3%) of the juveniles admitted to the program had a similar charge.

#### VOLUNTEER PROBATION PROGRAM

Of the 1980 referrals, the Court assigned 72 juveniles to the Volunteer Probation Program, an increase of 20 percent over 1979. Over one-third of the referrals to the VPO Program had been charged with a status offense and another one-third were charged with a Major Property offense. The number of status offenders assigned to the VPO Program in 1980 was more than double the total for 1979.

Major Property	119	56.1
Minor Property	55	25.9
Physical Harm	27	12.7
Social Control	11	5.2
TOTAL	212	99.9

A total of 212 juveniles were assigned to the federally funded Juvenile Restitution Project in 1980. Juveniles charged with a major property offense accounted for over half of the referrals to the project and those charged with a major property offense represented one-fourth of the total. (See The Juvenile Restitution Project: Final Evaluation to be published in December, 1981 for additional information on the Restitution Project).

#### RESIDENTIAL SERVICES

Out of the total referrals to Juvenile Court in 1980, a total of 154 were committed to a Residential Services Group Home. Those placed in the program as the result of a status offense accounted for 40.9 percent and major property offenders about one-fourth of the total population.

## PART TWO: ADULT SERVICES

### I N T R O D U C T I O N

Since 1932, Jefferson County Government has recognized its responsibility to provide assistance and social services to needy families and individuals. The Department for Human Services (DHS) is responsible for providing these services through its Financial Assistance Department and its Nutrition Program for the Aging. The primary goal of the Financial Assistance Department is to promote the self-sufficiency of families and individuals in social and economic crisis situations. The goal of the Nutrition Program is to provide hot meals and social services for elderly persons living in the area.

The information in this report for both the Financial Assistance Program and the Nutrition Program for the Aging is for calendar year 1980.

### Section I. Financial Assistance Program

In 1980, the Financial Assistance Program provided more than one million dollars to assist needy families and individuals. The program operates on a voucher system in which clients are given grants for specific needs. The dollar figures for each month for the major categories of voucher items are in Table 35 and the percentage distribution for the items is illustrated in Figure 12. Overall expenditures increased by over one-fifth in comparison to 1979. About 60 percent of the amount distributed was expended for rent. The category of Heat/Lights had the largest increase in amount spent, while Food was the only category to decline.

The purpose of the Emergency Financial Assistance Program is to provide temporary financial assistance for food and shelter to those persons residing in Jefferson County who cannot provide these necessities for themselves and who have no other resources which they can utilize in obtaining these basic necessities. In addition, this program provides assistance for personal care and limited transportation for those who cannot provide this for themselves and have no other resources. Short-term counseling, social service planning, and information and referrals to other community resources are also provided. Services are delivered on a temporary basis in order to provide applicants the time and resources to become self sufficient or to obtain financial support from some other source, usually state or federal assistance programs.

During 1980, the Financial Assistance Program opened 7,189 cases, while another 3,303 cases were refused assistance because they did not meet the Department's eligibility criteria. January had the highest number of case openings and also the highest amount of expenditures, while August has the lowest month. Slightly over half (52%) of the cases opened were new cases which had received no previous assistance from DHS. Whites

comprised 55 percent and blacks 45 percent of the cases.

The reasons for care by type of case are shown in Table 37. The Unemployed category accounted for one-third of the cases and amount of assistance. The next most frequent reasons for care were the Illness categories. The amount of assistance for Unemployed cases was two-thirds higher in 1980 than in 1979.

## Section II. Nutrition Program for the Aging

The Nutrition Program for the Aging has been in operation in Jefferson County since 1974 to provide hot meals and supportive social services to anyone aged 60 or over and to their spouses regardless of age. In 1977, the program was expanded to Henry, Oldham, Trimble, Bullitt, Shelby, and Spencer Counties which together with Jefferson County form the Area Development District known as K.I.P.D.A.

These older persons may learn of program services through various sources. Weekly menus are published in the local newspaper, and monthly menus and activities calendars are distributed at each site.

The program publishes a quarterly newsletter that publicizes available services and activities for older persons. Informational brochures are periodically distributed to various agencies and organizations that have contact with older persons as part of the program's ongoing outreach effort.

Public service announcements are aired by local broadcasting stations to inform older persons of services. A slide-tape show has been developed specifically for the program, and is used to publicize program services at info fairs and before large groups.

The program has established and maintained a close working relationship with many agencies and organizations that serve older persons, and this relationship generates many referrals to the program.

The primary goal of the program is to provide elderly citizens with one hot meal per day, five days per week, either in a congregate setting or in an individual's own home. The congregate meal setting aspect of the program is emphasized, as it provides older people an opportunity to socialize with others who may have similar interest and problems. This helps alleviate some of the feelings of loneliness, rejection, and use-

lessness which are common among older people. Participation in the program is encouraged through volunteer activity and daily participation in meal programs and site activities.

Meals are served at noon. Reservations are required, and participants are requested to sign in upon arriving at the center. Contributions in any amount up to the full meal cost are accepted. No one is refused a meal due to inability to contribute.

Activities and services are generally scheduled for each center prior to the noontime meal. Activity calendars are planned monthly and distributed to all participants. The numerous activities and services that are available vary from day-to-day and from center-to-center. Examples of center activities are:

- ✓ An arts and crafts lesson by Metro Parks and Recreation
- ✓ A bridge lesson or pinochle tournament
- ✓ CPR training by the American Red Cross
- ✓ Shopping assistance trip to the local grocery store
- ✓ Glaucoma testing or blood pressure screening for hypertension
- ✓ Outing to a local park for a picnic

Nutrition Program sites are chosen according to their proximity to concentrations of older (over 60 years of age), poor, and minority populations. In 1980, four new sites were opened in Jefferson County while one site was opened at Nazareth which is outside of Jefferson County. The following site changes took place in 1980:

- . Nazareth began meal delivery on March 3, 1980;
- . Newburg opened July 23, 1980;
- . James Lee Presbyterian opened July 30, 1980;
- . St. William opened August 6, 1980; and
- . Presbyterian Community Center opened August 13, 1980.

The Nutrition Program assigns one part-time paid staff person to each congregate nutrition site. The site manager is responsible for the daily meal service, for organizing and supervising programs and activities, and for recording meals and services and for completing program reports. Because of the volume of work that must be accomplished in a limited amount of time, including registering participants, organizing activities, setting tables, dishing food, serving meals, cleaning dishes and utensils, checking registrations, recording services, counting contributions, ordering meals, and completing program statistical reports, a strong volunteer staff at each congregate site is essential.

Home-delivered meals are provided directly by the nutrition program from congregate nutrition sites and are also provided by sub-contract with community-based service organizations. In both situations, the actual meal deliveries are made by volunteers. The entire home-delivered meal system depends on volunteers to deliver the meals.

In 1980, the entire program served 422,203 meals which is an increase of 21.8 percent over 1979. Meals served in a congregate setting totaled 270,560, which represents an increase of 15.5 percent over 1979 while the number of home delivered meals increased by 35.0 percent to 151,643. More than four-fifths of the meals were served in Jefferson County. The number of meals served in the counties outside of Jefferson went up by less than one percent in 1980.

The greatest increase in meals served took place at Buechel Park Baptist primarily in home delivered meals.
