ACQUISITIONS

introduction

This report is the most recent publication by the Bureau of Criminal Statistics (BCS) on the subject of homicide in California. The three primary purposes of this publication are: 1) to provide an annual overview of findings pertaining to the crime of homicide and its victims, as well as information about persons arrested for murder; 2) to monitor homicide data on an annual basis in order to detect significant year-to-year changes; and 3) to provide homicide information on topics of special interest, such as justifiable homicide.

Primary emphasis has been placed on the crime of willful homicide. Variables such as location of the homicide, victim-offender relationship, type of weapon used, and circumstance contributing to the homicide are analyzed in terms of the personal characteristics of the victim (sex,

race/ethnic group, and age). In addition to the analysis of willful homicide crimes reported in 1982, other areas of analytical emphasis include: characteristics of persons arrested for murder; defendants sentenced to death; peace officers killed in the line of duty; and justifiable homicides, both by peace officers and private citizens.

Omitted from this year's report is the Adult Felony Arrest Dispositions section. Because of a change in procedures in developing the supporting data base, data were not available in time for inclusion in this publication.

This publication relies principally on charts to convey essential facts about homicide in California. These charts refer to and are based on tables presented in the Data Section at the back of the report.

Note: Your comments concerning this publication are requested. Please use the survey page at the back of this book.

methodology

Most data presented in this report were obtained from two independently compiled BCS data bases: the Automated Homicide File for data pertaining to both willful and justifiable homicides, and the Monthly Arrest and Citation Register for data relevant to the characteristics of persons arrested for murder.¹ The reader is cautioned against comparing data from the two independent data bases.

Trend data are shown from 1974 when the Automated Homicide File was established. Prior to this time, data on homicide variables were not available for analysis or comparison.

The analysis of race/ethnic data must be considered in light of the subjectivity of the labeling process and recent classification changes, such as those of the U.S. Bureau of the Census (1980).

The Data Section contains raw and "analyzed" data tables. For any given variable, the raw data table shows the frequency count of each category, including that of "unknown." When, for purposes of analysis, unknown data are removed and categories are combined, the table becomes an analyzed data table. Analyzed data tables are the source tables for all charts in the report.

In its continuing effort to reduce the incidence of unknown homicide crime data, BCS has implemented procedures to deal with incomplete records. The result of this effort, as

measured from 1980, has been that the amount of unknown data in the 1981 and 1982 Automated Homicide Files has decreased substantially, especially with respect to key variables (victim-offender relationship, location of incident, and day of incident). Also, a number of changes in the frequency distributions of these variables occurred. The most pronounced of these changes and the variables with which each is associated are listed below.

1. **Relationship between victim and offender** — An increase in frequency in the "stranger" category.
2. **Location of incident** — An increase in frequency in the "victim's residence" category.
3. **Day of incident** — A decrease in frequency in the "weekend" category.

Despite these changes in the frequency distributions, essential relationships between the categories of these variables, for the most part, did not change.

This logo will alert the reader to those tables and charts based on tables that still contain a considerable amount of unknown data. The effects of these unknown data, were such data known, cannot be predicted with any assurance. It seems likely, however, that changes noted above would be accentuated.

¹ Tables 3-6, 8-44, and 50-59 were compiled from Automated Homicide File data. The data source for Tables 45-49 was the Monthly Arrest and Citation Register.

HOMICIDE

WILLFUL HOMICIDE The Crime and Its Victims

The crime of willful homicide is defined by the Uniform Crime Reporting (UCR) Program of the Federal Bureau of Investigation as the "willful (nonnegligent) killing of one human being by another." Attempted murder, justifiable homicide, manslaughter by negligence, and suicide are excluded. The data presented in this section of the report coincide with that definition, and were obtained almost exclusively from the Automated Homicide File. Other data sources are indicated in the footnotes of the appropriate tables.

The number of willful homicides reported to the UCR system in 1973 was 1,862. In 1982, the number had grown to 2,778 — an increase of 49.2 percent. These figures are more meaningful when viewed in the context of rates per 100,000 population and in relation to other violent crimes. In this context, the number of willful homicide victims for each 100,000 population grew from 8.9 in 1973 to 11.2 in 1982 — an increase of 25.8 percent.

Other general findings related to the crime of willful homicide are that more persons were killed on Saturday and Sunday than on other days of the week; more victims were killed at their places of residence than in other

locations; and more were killed by firearms than by all other types of weapons combined. Also, relatively more persons in the state's 20 most populated counties were willful homicide victims than were persons in the 38 remaining counties.

The following charts and chart-related statements describe homicide crimes in terms of:

- The number of victims in the context of rate per 100,000 population.
- The relation of homicide crimes to other violent crimes.
- The personal characteristics (sex, race/ethnic group, and age) of the victim and the interrelationship of these characteristics; for example, age of victim as a function of race.
- The relationship between sex, race/ethnic group, and age of the victim and homicide rate, victim-offender relationship, time of incident (month and day), location of incident, type of weapon, and circumstance contributing to the homicide incident.

TABLE 1
WILLFUL HOMICIDE CRIMES, 1973–1982
Number, Rate per 100,000 Population, and Annual Percent Change

Year	Number	Percent change ^a	Rate	Percent change ^a
1982	2,778	–11.5	11.2	–13.8
1981	3,140	–7.8	13.0	–9.1
1980	3,405	15.8	14.3	13.5
1979	2,941	13.1	12.6	10.5
1978	2,601	4.8	11.4	2.7
1977	2,481	12.1	11.1	9.9
1976	2,214	.8	10.1	–1.0
1975	2,196	11.5	10.2	9.7
1974	1,970	5.8	9.3	4.5
1973	1,862	—	8.9	—

^a Annual percent change in both number and rate is calculated from the number and rate of the previous year.
Source: Criminal Justice Profile — 1982, Statewide, to be published by the Bureau of Criminal Statistics, California Department of Justice, later this year.

From 1981 to 1982:

- The number of willful homicides decreased from 3,140 to 2,778.
- The willful homicide rate per 100,000 population decreased from 13.0 to 11.2.

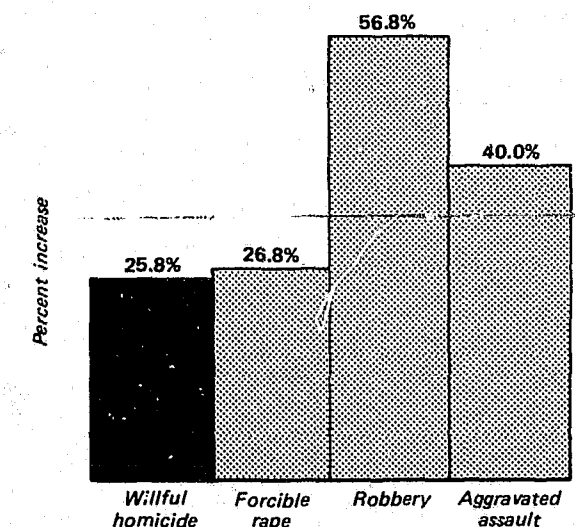

From 1973 to 1982:

- The number of willful homicides increased from 1,862 to 2,778.
- The willful homicide rate per 100,000 population increased from 8.9 to 11.2, or 25.8 percent.

For purposes of comparison, similar increases in the rates of other violent crimes during this period were as follows:

- Forcible rape — 26.8 percent.
- Robbery — 56.8 percent.
- Aggravated assault — 40.0 percent.

CHART 1
VIOLENT CRIMES
Percent Increase in Rate per 100,000 Population
from 1973 to 1982

Source: Table 7.

CHART 2
WILLFUL HOMICIDE CRIMES, 1982
Distribution of Victims by Sex, Known
Race/Ethnic Group, and Known Age

SEX

When willful homicide victims were analyzed by sex, it was found that:

- In 1982, 76.8 percent were male and 23.2 percent were female.
- For each year, 1974–1982, the larger proportion of homicide victims were male.

RACE/ETHNIC GROUP

When willful homicide victims were analyzed by race/ethnic group, it was found that:

- In 1982, 36.1 percent were white (not Hispanic), 30.8 percent were Hispanic, 28.5 percent were black, and 4.6 percent were of "all other" race/ethnic groups combined.
- For each year, 1974–1982, the largest proportion of homicide victims were classified white (not Hispanic). During this period, this proportion has tended to decrease while the proportion of those classified as Hispanic has tended to increase.

AGE

When willful homicide victims were analyzed by age, it was found that:

- In 1982, 33.1 percent were 0–24 years, 38.9 percent were 25–39 years, and 28.0 percent were 40 years of age or older.
- For each year, 1974–1982, the smallest proportion of homicide victims were 40 years of age and older.

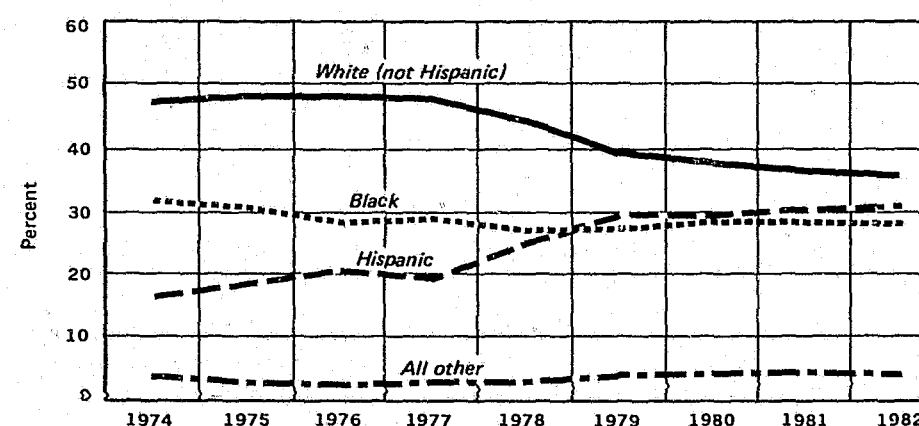

Source: Tables 9, 10, and 11.

CHART 3
WILLFUL HOMICIDE CRIME TRENDS, 1974–1982
Sex, Known Race/Ethnic Group, and
Known Age of Homicide Victim

A. Proportions of homicide victims by sex

B. Proportions of homicide victims by known race/ethnic group

C. Proportions of homicide victims by known age

Source: Tables 9, 10, and 11.

CHART 4
WILLFUL HOMICIDE CRIMES, 1982
Sex of Victim by Known Race/Ethnic Group

Source: Table 8.

CHART 5
WILLFUL HOMICIDE CRIMES, 1982
Known Age of Victim by Known Race/Ethnic Group

Source: Table 12.

When sex of victim was analyzed by race/ethnic group, it was found that:

- Proportionately more Hispanic homicide victims were male than were either white (not Hispanic) or black homicide victims (87.8 versus 65.0 and 79.8 percent, respectively).
- Conversely, proportionately fewer Hispanic homicide victims were female than were either white (not Hispanic) or black homicide victims (12.2 versus 35.0 and 20.2 percent, respectively).

When known age of victim was analyzed by race/ethnic group, it was found that:

- Proportionately more Hispanic homicide victims were 24 years of age or younger than were either white (not Hispanic) or black homicide victims (41.5 versus 27.9 and 31.5 percent, respectively).
- Proportionately more white (not Hispanic) homicide victims were 40 years of age or older than were either Hispanic or black homicide victims (38.6 versus 16.4 and 26.5 percent, respectively).

CHART 6
WILLFUL HOMICIDE CRIMES, 1982
Rate per 100,000 Population by Sex, Race/Ethnic Group, and Age

Source: Table 22.

The willful homicide rate in 1982 was 11.2 per 100,000 population. Chart 6 shows willful homicide rates per 100,000 population for subgroups of victims classified by sex, race/ethnic group, and age.

In 1982:

- Males were more than three times as likely as females to be homicide victims (17.5 versus 5.1).

- Blacks were more than twice as likely as Hispanics and seven times as likely as whites (not Hispanic) to be homicide victims (42.7 versus 18.0 and 6.1, respectively).
- Persons 25-39 years of age were almost twice as likely to be homicide victims as were either younger or older persons (17.4 versus 9.3 and 9.0, respectively).

CHART 7
WILLFUL HOMICIDE CRIMES, 1982
Known Relationship of Victim to Offender

Source: Table 23.

CHART 8
WILLFUL HOMICIDE CRIMES, 1982
Known Relationship of Victim to Offender
by Sex of Victim

When known relationship of the victim to the offender was analyzed by sex, it was found that:

- The female victim was much more likely than the male victim to be the spouse of the offender (26.4 versus 3.8 percent).
- The female victim was much more likely than the male victim to be the parent or child of the offender (11.5 versus 4.9 percent).
- The male victim was much more likely than the female victim to be a gang member (9.6 versus .7 percent).

Note: Percents may not add to 100.0 because of rounding.

Source: Table 23.

CHART 9
WILLFUL HOMICIDE CRIMES, 1982
Known Relationship of Victim to Offender by Race/Ethnic Group of Victim

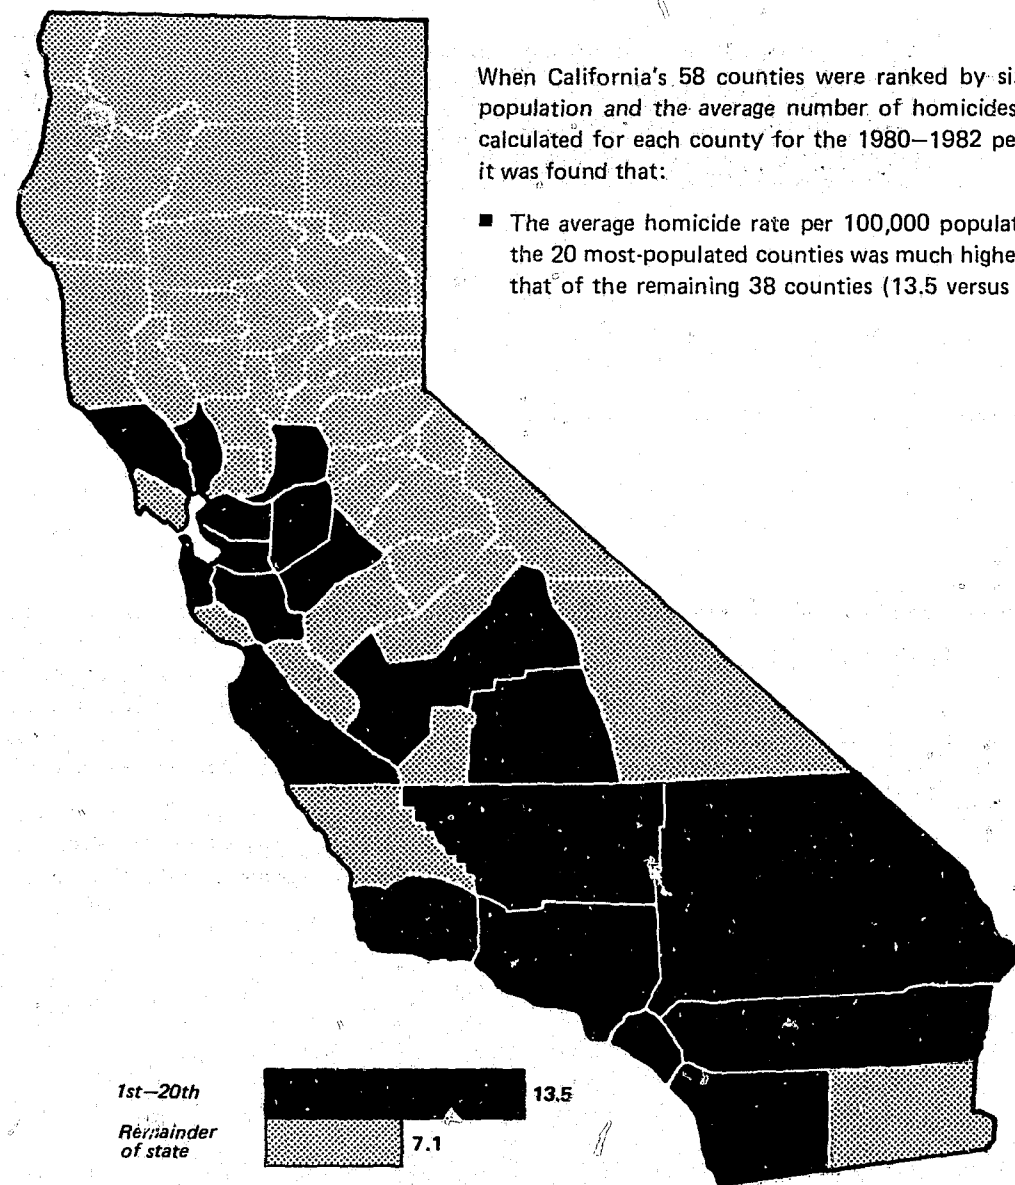

Note: Percents may not add to 100.0 because of rounding.

Source: Table 24.

When known relationship of the victim to the offender was analyzed by race/ethnic group, it was found that:

- For each race/ethnic group, the homicide victim was most likely to be a friend or acquaintance of the offender. This relationship was most pronounced in the case of blacks (52.7 percent).
- The Hispanic victim was much more likely to be a gang member than the white (not Hispanic) or black victim (18.0 versus .7 and 6.2 percent, respectively), and less likely to be the spouse, parent, or child of the offender than either the white (not Hispanic) or black victim (9.0 versus 20.5 and 17.8 percent, respectively).
- The black victim was less likely to be a stranger to the offender than the white (not Hispanic) or Hispanic victim (17.6 versus 28.7 and 26.7 percent, respectively).

CHART 10
WILLFUL HOMICIDE CRIMES, 1980-1982
Average Homicide Rate per 100,000 Population to Size of County

Source: Table 26.

CHART 11
WILLFUL HOMICIDE CRIMES, 1982
Percent by Known Month of Incident

When 1982 willful homicide crimes were analyzed by known month of incident, it was found that:

- More homicides occurred in the last six months than in the first six months (51.3 versus 48.7 percent).
- This relationship was found to exist each year since 1974 (Chart 12).

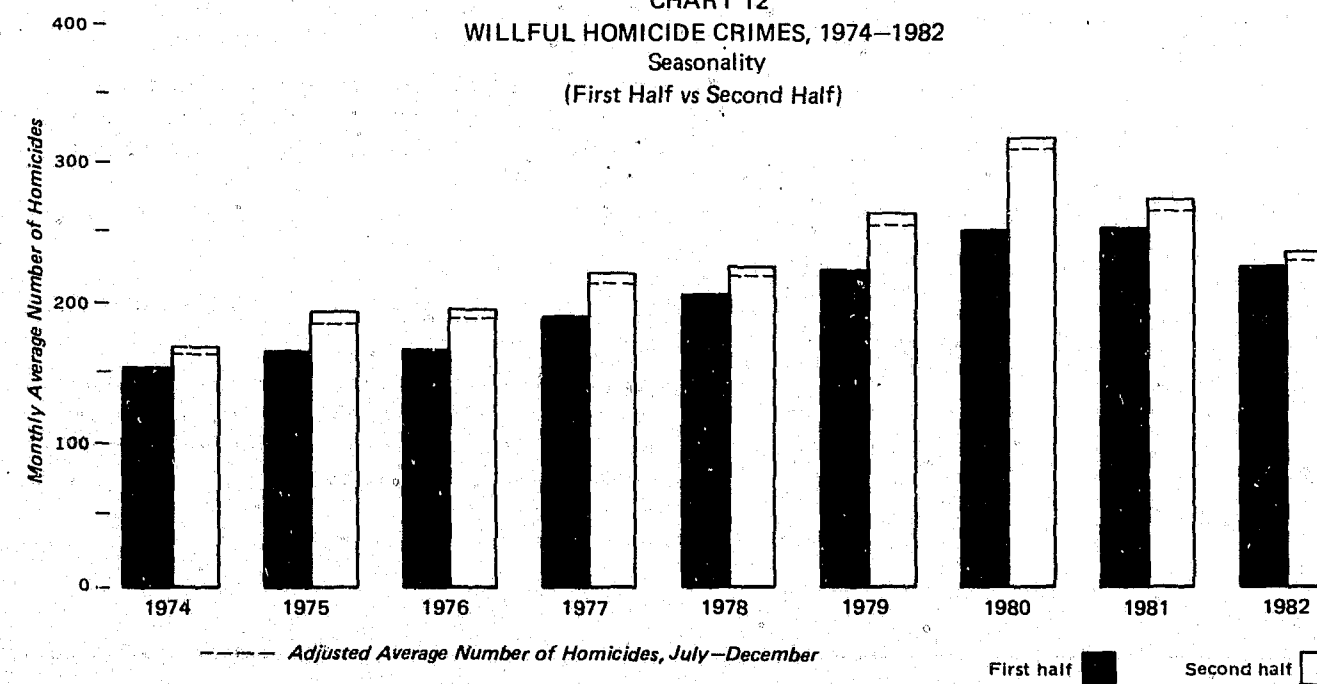

Based on an average annual increase of 6.66 percent¹, the average monthly number of homicides in the second half of any given year should be 3.28 percent greater than those in the first half of that year. When this semiannual growth increment is subtracted from the average monthly number of homicides in the second half of each year, it is found that the average number of homicides remaining is significantly greater than the average number in the first half of the year. This suggests a definite seasonal pattern in willful homicide crimes in which more persons are killed in the last six months than in the first six months of the year.

¹Calculated by averaging the annual percent changes in number of homicides for the fifteen-year period, 1968-1982.

Source: Table 28.

CHART 12
WILLFUL HOMICIDE CRIMES, 1974-1982
Seasonality
(First Half vs Second Half)

Source: Table 29.

CHART 13
WILLFUL HOMICIDE CRIMES, 1982
Known Day of Incident by Race/Ethnic Group of Victim

Note: Percents may not add to 100.0 because of rounding.
Source: Table 30.

CHART 14
WILLFUL HOMICIDE CRIMES, 1982
Known Day of Incident by Sex of Victim

Source: Table 30.

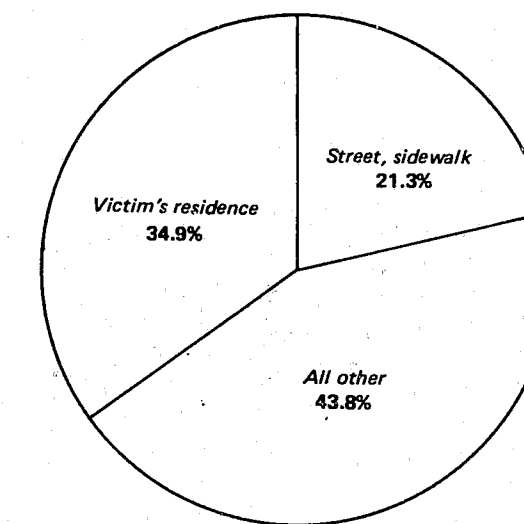

When 1982 willful homicide crimes were analyzed by known day of incident and race/ethnic group of victim, it was found that:

- Most willful homicides occurred on Saturday and Sunday (20.3 and 15.6 percent, respectively).
- Proportionately more Hispanic victims than white (not Hispanic) or black victims were killed on Saturday and Sunday combined (46.3 versus 30.4 and 32.3 percent, respectively).

When known day of incident was analyzed by sex of victim, it was found that:

- Females were more likely than males to have been killed on weekdays (70.2 versus 62.5 percent), while males were more likely than females to have been killed on weekends (37.5 versus 29.8 percent).

CHART 15
WILLFUL HOMICIDE CRIMES, 1982
Known Location of Homicide

Source: Table 32.

When 1982 willful homicide crimes were analyzed by known location of incident and sex of victim, it was found that:

- 34.9 percent of homicide victims were killed at their places of residence.
- Proportionately, many more female than male homicide victims were killed at their places of residence (57.1 versus 28.2 percent).

And,

- 21.3 percent of homicides occurred on streets or sidewalks.
- Proportionately, many more male than female homicide victims were killed on streets or sidewalks (24.9 versus 9.6 percent).

CHART 16
WILLFUL HOMICIDE CRIMES, 1982
Known Location of Homicide by Sex of Victim

Source: Table 32.

CHART 17
WILLFUL HOMICIDE CRIMES, 1982
Known Location of Homicide by Race/Ethnic Group of Victim

Note: Percents may not add to 100.0 because of rounding.
Source: Table 33.

When willful homicide crimes were analyzed by race/ethnic group of victim and known location of incident, it was found that:

- Proportionately more white (not Hispanic) than Hispanic or black victims were killed at their places of residence (45.0 versus 23.0 and 35.3 percent, respectively).
- Proportionately fewer white (not Hispanic) than Hispanic or black victims were killed on streets or sidewalks (10.9 versus 27.5 and 29.6 percent, respectively).

CHART 18
WILLFUL HOMICIDE CRIMES, 1982
Known Type of Weapon

Note: Percents may not add to 100.0 because of rounding.
Source: Table 35.

When 1982 willful homicides were analyzed by known type of weapon used, it was found that:

- 56.7 percent resulted from the use of firearms.
- 23.9 percent resulted from the use of knives.
- 6.4 percent resulted from the use of blunt objects.
- 6.3 percent resulted from the use of personal weapons (hands, fists, feet, etc.).
- 2.2 percent resulted from the use of ropes.
- 4.4 percent resulted from the use of weapons grouped in the "all other" category.

CHART 19
WILLFUL HOMICIDE CRIMES, 1982
Known Type of Weapon by Sex of Victim

Note: Percents may not add to 100.0 because of rounding.
Source: Table 36.

CHART 20
WILLFUL HOMICIDE CRIMES, 1982
Known Type of Weapon by Race/Ethnic Group of Victim

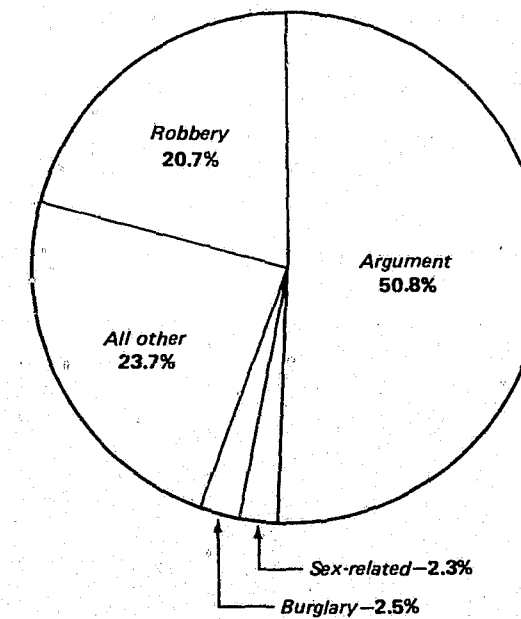

Note: Percents may not add to 100.0 because of rounding.
Source: Table 37.

When known type of weapon used was analyzed by sex and race/ethnic group of the homicide victim, it was found that:

- Regardless of sex or race/ethnic group, the victim was most likely to have been killed by a firearm.
- The proportion of males killed by firearms was greater than that of females (60.9 versus 42.4 percent).
- The proportion of females killed by personal weapons (hands, fists, feet, etc.) was much greater than that of males (12.5 versus 4.5 percent).
- Proportionately more white (not Hispanic) victims were killed by personal weapons than were Hispanics or blacks (9.4 versus 4.6 and 4.5 percent, respectively).

CHART 21
WILLFUL HOMICIDE CRIMES, 1982
Known Contributing Circumstance

Source: Table 39.

When 1982 willful homicide crimes were analyzed by known contributing circumstance, it was found that:

- 50.8 percent were associated with arguments.
- 20.7 percent were associated with robbery.
- 2.5 percent were associated with burglary.
- 2.3 percent were sex-related.
- 23.7 percent were associated with "all other" contributing circumstances.

CHART 22
WILLFUL HOMICIDE CRIMES, 1982
Known Contributing Circumstance by Sex of Victim

Note: Percents may not add to 100.0 because of rounding.

Source: Table 39.

CHART 23
WILLFUL HOMICIDE CRIMES, 1982
Known Contributing Circumstance by Race/Ethnic Group of Victim

Note: Percents may not add to 100.0 because of rounding.

Source: Table 40.

When willful homicide crimes were analyzed by known contributing circumstance and sex of victim, it was found that:

- Males were more likely than females to have been victims of homicides in which the contributing circumstance was the crime of robbery (22.9 versus 13.5 percent).
- Females were much more likely than males to have been victims of homicides in which the contributing circumstance was the crime of burglary (5.1 versus 1.7 percent).
- Females were much more likely than males to have been victims of homicides in which the contributing circumstance was a sex-related crime (9.1 versus .3 percent).

When willful homicide crimes were analyzed by known contributing circumstance and race/ethnic group of the victim, it was found that:

- For each race/ethnic group shown, the circumstance which most contributed to homicides was an argument.
- White (not Hispanic) victims were much more likely than either Hispanics or blacks to have been victims of homicides in which the contributing circumstance was either a robbery, burglary, or sex-related crime (34.0 versus 18.8 and 20.8 percent, respectively).
- Hispanics were much more likely than either whites (not Hispanic) or blacks to have been victims of homicides in which the contributing circumstance was gang-related (13.5 versus .7 and 5.3 percent, respectively).

CHART 24
WILLFUL HOMICIDE CRIMES, 1982
Known Contributing Circumstance by Known Age of Victim

Note: Percents may not add to 100.0 because of rounding.

Source: Table 42.

When willful homicide crimes were analyzed by known contributing circumstance and known age of victim, it was found that:

- Of the 131 victims 0-14 years of age, 44.3 percent of the homicides were the result of child abuse. This finding was even more pronounced for the 0-4 year age group in which 63.6 percent of the deaths resulted from child abuse (Table 43).

- Of the 201 victims in the 15-19 year age group, 27.4 percent of the homicides resulted from gang-related circumstances.
- Of the 1,831 victims in the 20-69 year age group 56.1 percent of the homicides resulted from arguments.
- Of the 100 victims 70 years of age and older, 71.0 percent of the homicides were the result of rape, robbery, or burglary (7.0, 40.0, and 24.0 percent, respectively).

ARRESTS FOR MURDER

This section of the report is concerned with arrests for murder in 1982. Murder is defined as the unlawful killing of a human being with malice aforethought.

Data pertaining to reported arrests for murder were obtained from the Monthly Arrest and Citation Register (Arrest Register). The Arrest Register contains information

on all arrests made in 1982, as reported to BCS by California law enforcement agencies.

Data which follow pertain to personal characteristics (sex, race/ethnic group, and age) of those arrested for murder in 1982, and to the manner in which these characteristics relate to one another; for example, the distribution of age of arrestee as a function of race.

CHART 25
ARRESTS FOR MURDER, 1982
Sex, Juvenile-Adult, Race/Ethnic Group, and Age of Arrestee

Note: Percents may not add to 100.0 because of rounding.
Source: Tables 45, 46, 47, and 48.

- Analysis of the characteristics of 3,552 arrestees for murder in 1982 showed that:
- 89.2 percent were male.
 - 10.8 percent were female.
- And,
- 89.1 percent were adult.
 - 10.9 percent were juvenile.
- And,
- 26.2 percent were white (not Hispanic).
 - 32.3 percent were Hispanic.
 - 37.8 percent were black.
 - 3.8 percent were of "all other" race/ethnic groups.
- And,
- 48.0 percent were 24 years of age or younger.
 - 40.2 percent were 25-39 years of age.
 - 11.9 percent were 40 years of age or older.

CHART 26
ARRESTS FOR MURDER, 1982
Sex and Age Groups by Race/Ethnic Group

SEX OF ARRESTEE BY RACE/ETHNIC GROUP

AGE OF ARRESTEE BY RACE/ETHNIC GROUP

RACE/ETHNIC GROUP OF JUVENILE AND ADULT ARRESTEES

^aA person under 18 years of age.
Source: Tables 45, 47, and 48.

When sex of arrestees for murder in 1982 was analyzed by race/ethnic group, it was found that:

- The ratio of male to female arrestees was much greater for Hispanic than for either white (not Hispanic) or black (16 to 1 versus 6 to 1 and 7 to 1, respectively).

When age of arrestees for murder was analyzed by race/ethnic group, it was found that:

- Proportionately fewer white (not Hispanic) arrestees were under 25 years of age than were Hispanic or black arrestees (35.2 versus 59.4 and 47.1 percent, respectively).

- Conversely, proportionately more white (not Hispanic) arrestees were 25 years of age or older than were Hispanic or black arrestees (64.8 versus 40.6 and 52.9 percent, respectively).

When juvenile and adult arrestees for murder were analyzed by race/ethnic group, it was found that:

- The proportion of white (not Hispanic) juvenile arrestees was much less than the proportion of white (not Hispanic) adult arrestees (14.6 versus 27.6 percent).
- Conversely, the proportion of Hispanic and black arrestees was greater for juveniles than for adults (79.6 versus 68.9 percent).

death penalty cases

HOMICIDE

DEATH PENALTY CASES

This section presents information on those persons sentenced to death in California superior courts in 1982. Death penalty cases were extracted from the 1982 Offender-Based Transaction Statistics (OBTS) system.

The death penalty in California was ruled unconstitutional by the California Supreme Court in February 1972. This was followed by a public vote and the reinstatement of the death penalty in January 1974. The death penalty was subsequently declared unconstitutional by the California Supreme Court in December 1976 and by virtue of a veto override in August 1977, new legislation was adopted that reinstated the death penalty in California.

By public vote on November 7, 1978, additional criteria were added to the circumstances by which a person could be sentenced to death. The criteria currently specified by Penal Code Section 190.2 are as follows:

1. Intentional murder for financial gain.

2. Previously convicted of murder in the first or second degree.

3. Multiple convictions for first or second degree murder.

4. Murder perpetrated by means of destructive device, bomb, or explosive.
5. Murder to prevent arrest or to effect escape from custody.

6. Murder of a peace officer or fireman engaged in the performance of his/her duties.

7. Murder of a witness to prevent testimony or in retaliation for testimony given.

8. Murder of an elected or appointed official, judge, or prosecutor in retaliation for performance of his/her official duties.

9. Murder by ambush.

10. Murder because of the victim's race, color, religion, nationality, or country of origin.

11. Murder involving torture.

12. Murder by poison.

13. Murder during the commission of: a) robbery, b) kidnapping, c) rape, d) lewd or lascivious act upon a child under the age of 14, e) oral copulation or sodomy in violation of Penal Code Sections 286 and 288a, f) burglary, g) arson, and h) train wrecking.

During 1982, 38 persons convicted of first degree murder were sentenced to death. The sex, race/ethnic group, age, and sentencing county of those sentenced to death are presented in Table 2.

Of the 38 defendants sentenced to death in 1982:

- All were male.
- 14 were white (not Hispanic).
- 7 were Hispanic.
- 16 were black.
- 1 was of another race/ethnic group.

- The median age was 29.5 years.

And,

- The largest number were sentenced in Los Angeles County (12).

PEACE OFFICERS KILLED IN THE LINE OF DUTY

A topic of special interest is that of peace officers killed in the line of duty. Data pertaining to peace officers were obtained from the Automated Homicide File.

From 1973-1982, 102 peace officers were killed in the line of duty. During the same period, 846 felons were justifiably killed by peace officers. Analysis of the data in Table 3 showed that:

- The average annual number of peace officers killed was 10.2. In 1982, the number was 6.
- The average annual number of felons killed by peace officers was 84.6. In 1982, the number was 71.
- The number of peace officers killed in the past five years (1978-1982) was less than that of the previous five years (45 versus 57), and the number of felons killed by peace officers in the line of duty in the past five years was less than that of the previous five years (420 versus 426).

Type of weapon	
TOTAL	6
Handgun	5
Offender's	4
Officer's	1
Rifle	1
Offender's	1
Officer's	0

In 1982, all six of the peace officers killed in the line of duty were male.

With respect to type of weapon used to kill peace officers in 1982:

- All six peace officers were killed by firearms — five by handguns, and one by a rifle.

justifiable homicides

JUSTIFIABLE HOMICIDES BY PEACE OFFICERS
AND PRIVATE CITIZENS, 1982
Sex, Known Race/Ethnic Group, and Known Age of Deceased

Source: Tables 52 and 56.

JUSTIFIABLE HOMICIDES

A justifiable homicide is defined by the Uniform Crime Reporting (UCR) Program as the killing of a felon by a private citizen or a peace officer during the commission of a felony. Justifiable homicides are sometimes referred to as excusable or noncriminal homicides. The California Penal Code defines killing in self-defense as justifiable homicide, whereas the national UCR Program does not. Therefore, for the most part, self-defense cases are treated as willful rather than justifiable homicides.

In 1982, when justifiable homicides committed by peace officers and by private citizens were analyzed by sex, known race/ethnic group, and known age, it was found that:

- Most felons killed by peace officers and private citizens were male (98.6 and 100.0 percent, respectively).
- Proportionately more felons killed by peace officers were white (not Hispanic) than were felons killed by private citizens (32.8 versus 26.5 percent).
- Proportionately fewer felons killed by peace officers were black than were felons killed by private citizens (34.3 versus 43.1 percent).
- Most felons killed by peace officers and private citizens were 20-29 years of age (57.1 and 54.9 percent, respectively).

justifiable homicides

JUSTIFIABLE HOMICIDES BY PEACE OFFICERS AND
PRIVATE CITIZENS, 1982
Known Location of Homicide

Note: Percents may not add to 100.0 because of rounding.
Source: Tables 53 and 57.

In 1982, when justifiable homicides were analyzed by known location, it was found that:

- The location where felons were most frequently killed by peace officers was a street or sidewalk (48.5 percent).
- The location where felons were most frequently killed by private citizens was the citizen's residence (32.3 percent).

In 1982, analysis of type of weapon used in justifiable homicides by peace officers and private citizens showed that:

- Felons were most frequently killed by handguns, both by peace officers and private citizens (83.1 and 71.2 percent, respectively).
- Proportionately, shotguns were used more frequently in the killing of felons by peace officers than by private citizens (14.1 versus 8.7 percent).

TABLE 6
JUSTIFIABLE HOMICIDES BY PEACE OFFICERS
AND PRIVATE CITIZENS, 1982
Percent Distribution of Type of Weapon

	Total	Type of weapon					
		Hand-gun	Rifle	Shot-gun	Firearm-unknown	Knife	Other
Peace officers	100.0	83.1	1.4	14.1	1.4	.0	.0
Private citizens	100.0	71.2	6.7	8.7	6.7	6.7	.0

TABLE 22
WILLFUL HOMICIDE CRIMES, 1982
Rate per 100,000 Population Distributed by Sex, Race/Ethnic Group, and Age of Victim

Sex, race/ethnic group, and age	Percent ^a	Population	Victims	Rate
TOTAL	100.0	24,724,000	2,778 ^b	11.2
Sex				
Male	49.3	12,188,932	2,133	17.5
Female	50.7	12,535,068	645	5.1
Race/ethnic group				
White (not Hispanic)	66.6	16,466,200	1,003	6.1
Hispanic	19.2	4,747,000	855	18.0
Black	7.5	1,854,300	792	42.7
Other	6.7	1,656,500	128	7.7
Age				
0-24	40.0	9,879,700	919	9.3
25-39	25.0	6,190,900	1,080	17.4
40 and over	35.0	8,653,400	779	9.0

^aPercent distributions of Californians by sex, race/ethnic group, and age were obtained from Department of Finance 1980 population estimates. These percents were applied to the total population estimate of 24,724,000 used by the Bureau of Criminal Statistics in 1982 to calculate the subpopulation figures shown for sex, race/ethnic group, and age.

^bThis figure includes 12 victims whose race/ethnic group was unknown and 40 victims whose age was unknown. These "unknowns" are distributed proportionately among the several age and race/ethnic groups.

TABLE 26
WILLFUL HOMICIDE CRIMES, 1980-1982
Average Homicide Rate per 100,000 Population Distributed by Size of County

Size of county	Population July 1, 1981	Average number of victims 1980-1982	Average rate ^a
TOTAL	14,996,000	3,107.7	12.8
1st - 20th ^b	11,577,600	2,922.7	13.5
Remainder of state	2,618,400	185.0	7.1

^aThe average homicide rate for each county group was calculated on the basis of the summation of the estimated populations of the counties in the group as of July 1, 1981 and the average number of willful homicide victims during the three-year period of 1980-1982.
^bCounty groups are based on county population estimates as of July 1, 1981. 1st-20th is composed of the largest counties ranked in order of magnitude of population. These counties are Los Angeles, Orange, San Diego, Santa Clara, Alameda, San Bernardino, Sacramento, Riverside, San Francisco, Contra Costa, San Mateo, Ventura, Fresno, Kern, San Joaquin, Sonoma, Santa Barbara, Monterey, Stanislaus, and Tulare.

Yolo	115,800	—	16	10	4	2
Yuba	48,700	—	16	5	7	4

^aThe average homicide rate per 100,000 population for each county was calculated on the basis of the estimated population as of July 1, 1981 and the average number of willful homicide victims during the three-year period of 1980-1982. Population estimates were obtained from the California Department of Finance.
Note: The average homicide rate was not calculated when the total number of homicides during 1980-1982 was less than 20.

Notes: This table excludes 12 victims in 1974, 39 victims in 1975, 31 victims in 1976, 10 victims in 1977, 8 victims in 1978, and 9 victims in 1979 for whom the month of incident resulting in death was unknown.
Percents may not add to 100.0 because of rounding.

TABLE 29
WILLFUL HOMICIDE CRIMES, 1974-1982
Average Monthly Number of Homicides in First and Second Half of Year

Year	Number		Average monthly number			
	First half	Second half	First half	Second half	Projected second-half growth increment ^a	Adjusted second half ^b
TOTAL.....	11,052	12,565	204.7	232.7	6.7	226.0
1982.....	1,354	1,424	225.7	237.3	7.4	229.9
1981.....	1,511	1,629	251.8	271.5	8.3	263.2
1980.....	1,502	1,903	250.3	317.2	8.2	309.0
1979.....	1,361	1,571	226.8	261.8	7.4	254.4
1978.....	1,234	1,359	205.7	226.5	6.7	219.8
1977.....	1,145	1,326	190.8	221.0	6.3	214.7
1976.....	1,010	1,173	168.3	195.5	5.5	190.0
1975.....	1,001	1,156	166.8	192.7	5.5	187.2
1974.....	934	1,024	155.7	170.7	5.1	165.6

^aThis second-half growth increment is the average monthly number of homicides in the second half of the year attributed to the long-term increase in homicides. This number is obtained by multiplying the average monthly number of homicides in the first half of the year by the semiannual growth rate of homicides over the 15-year period, 1968 to 1982 (3.28 percent).

^bThe adjusted second-half number is the average monthly number of homicides in the second half of the year from which the projected homicide growth increment has been subtracted.
