ACKNOWLEDGMENT OF ASSISTANCE

All manuscripts utilizing data made available through the Consortium should acknowledge that fact as well as identify the original collector of the data. The ICPSR council urges all users of the ICPSR data facilities to follow some adaption of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

> THE DATA (AND TABULATIONS) UTILIZED IN THIS (PUBLICATION) WERE MADE AVAILABLE (IN PART) BY THE INTER-UNIVERSITY CONSORTIUM FOR POLITICAL AND SOCIAL RESEARCH. THE DATA FOR THE CRIME VICTIMIZATION STUDIES WERE ORIGINALLY COLLECTED BY THE BUREAU OF THE CENSUS FOR THE LAW ENFORCEMENT ASSISTANCE ADMINISTRATION. NEITHER THE COLLECTORS OF THE ORIGINAL DATA NOR THE CONSORTIUM BEAR ANY RESPONSIBILITY FOR THE ANALYSES OR INTERPRETATIONS PRESENTED HERE.

In order to provide funding agencies with essential information about the use of archival resources, and to facilitate the exchange of information about ICPSR participants' research activities, each user of ICPSR data facilities is expected to send two copies of each completed manuscript (or thesis abstract) to the Copsortium. Please indicate in the cover letter which data were used. The National Crime Survey (NCS) is a study of personal and household victimization, with victimization being measured on the basis of six selected crimes, including attempts: rape, robbery, assault, burglary, larceny, and motor vehicle theft. The reseach design consists of a survey of households both in the nation as a whole and in certain major U.S. cities. While the instruments used for the national and cities surveys were quite similar, two independent sample designs were employed. The data collection was conducted by the U.S. Census Bureau, initial processing of the data and documentation was performed by the Data Use and Access Laboratories (DUALabs), and subsequent processing was performed by the ICPSR under grants from the Law Enforcement Assistance Administration

Documentation for the National Crime Survey is comprised of four parts: an introduction (this document) which applies to both the National and Cities samples, an OSIRIS dictionary-codebook for the National Sample, an OSIRIS dictionary-codebook for the Cities Sample, and a glossary of terms and concepts used in the National Crime Survey.

The National Crime Survey was designed to achieve three primary objectives: 1) to develop detailed information about the victims and consequences of crime, 2) to estimate the numbers and types of crimes not reported to police, and 3) to provide uniform measures of selected types of crimes permitting reliable comparisons over time and between areas.

The surveys provide measures for the following types of crimes, including attempts: rape, robbery, assault, burglary, larceny, and auto or motor vehicle theft. Crimes such as murder, kidnapping, shoplifting, and gambling do not lend themselves to this type of survey and therefore are not covered. Those crimes which are reported are described as victimizations although data records contain weights that may be used to achieve incident estimates. A VICTIMIZATION reflects the consequences of a criminal act as it affects a single victim while an INCIDENT is a specific criminal act involving one or more victims. For example, if three persons are robbed simultaneously, the result will be three

STUDY DESCRIPTION

Ι

victimizations but only one incident of robbery.

To provide data for the nation as a whole, a national sample consisting of about 72,000 sample units was enumerated between January, 1973 and July, 1977. Periodic independent surveys of households in 26 major central cities were also conducted. All persons age 12 and older in selected households and group quarters were interviewed. Each respondent was asked a series of screening questions to determine if he/she was victimized during the reference period. In the event of a reported victimization, the respondent was then asked to complete an incident report.

Questions designed to obtain data on the characteristics and circumstances of the victimization were asked in each incident report. Items such as time and place of occurrence, injuries suffered, medical expenses incurred, number, age, race and sex of offender (s), relationship of offenders to victim (stranger, casual acquaintance, relative, etc.), and other detailed data relevant to a complete description of the incident were included in the report. Legal and technical terms, such as assault and larceny, were avoided during the interview. The incident was later classified in more technical terms based upon the presence or absence of certain elements.

In addition, data were collected in the study to obtain information on such dimensions as education, migration, labor force status, occupation, and income. By comparing these data for victims vs. non-victims of crime, it is possible to determine which segments of the population are most frequently victimized and by what types of crimes.

In one-half of the households in each city surveyed additional interviews were conducted concerning personal attitudes and perceptions of crime in general. The purpose of these questions was to gather information on general attitudes toward crime, the public's view of the police, the fear of crize, and the effect of this fear on behavioral patterns such as choice of shopping area and places of entertainment. The results from these attitude surveys are presented in a separate ICPSR study (ICPSR 7663) and are not documented here.

The total National Crime Survey employed two distinct samples: a National Sample, and a Cities Sample. Although virtually the same questionnaire forms were used in both samples, there are notable methodological differences between the two sample designs.

The National Sample consists of approximately 72,000 sample units selected in a stratified multistage cluster sample. 1931 Primary Sampling Units (PSUs) were formed within counties or groups of counties using every county in the U.S. The PSUs were grouped into 376 strata by combining PSUs with similar characteristics into 220 strata and allocating a single self-representing PS to the remaining 156 strata. The first stage of the sampling procedure consisted of the designation of the 376 specific PSUs in which interviewing was to be conducted. Beyond the 156 PSUs selected with certainty, a single PSU per stratum was selected with a probability proportionate to size in the 220 combined strata.

The sample of units within a PSU was attained in two stages. In the first stage, Enumeration Districts (geographic areas ranging in size from a city block to several hundred square miles, usually encompassing from 750 to 1,500 persons, established for the 1970 Census of Population and Housing) were systematically selected with a probability proportionate to their 1970 population size from a geographically arranged listing. In the second stage, each previously selected ED was subdivided into segments of about four housing units from which a sample of segments was then selected. Whenever possible, the segments were formed from the list of addresses compiled during the 1970 Census. Housing units built after the 1970 Census were sampled primarily from lists of new construction units.

The initial National Sample of 72,000 households yields approximately 60,000 household interviews in the 50 states and the District of Columbia for a 6-month period. Because of the continuing nature of the National Sample survey, a rotation scheme was divised to avoid interviewing the same household indefinitely and, perhaps, poor cooperation or biased responses resulting from repeated interviewing. The initial sample of about 72,000 households was divided into six rotation groups with each group being interviewed every six months for three years (a total of seven interviews per household). Within each rotation group six panels are designated, with a different panel interviewed each month

 \sim

III

SAMPLING INFORMATION

Sample Design and Size

National Sample

during the 6-month period.

Initial household and personal interviews are not used in preparing estimates as they are only for "bounding" purposes, i.e., to set a time reference which avoids respondents' duplicating reports of events in subsequent interviews. Thus, using the first interview as a boundary line, the interviewer is able to detect incidents which the respondent may have reported in a previous interview.

Cities Sample

The NCS Cities Sample data consist of information about victimization in 26 central cities which were collected in five separate surveys, each involving a similar sampling procedure. The surveys were conducted between 1972 and 1975 according to the following data collection schedule: in 1972 eight "impact cities," designated by the Department of Justice, were surveyed; in 1973 the nation's five largest cities were surveyed; in 1974 households were interviewed in thirteen selected cities; and both the eight impact cities and the five largest cities were resurveyed in 1975. Thus, there are data for twenty six cities, thirteen of which were surveyed twice.

About 12,000 sample households were selected in each of the 26 cities with approximately 10,000 interviews having actually taken place in each. The 8 impact cities include: Baltimore, Dallas, Cleveland, St. Louis, Atlanta, Portland (Oregon), Denver, and Newark. The nation's 5 largest cities were: New York, Chicago, Philadelphia, Detroit, and Los Angeles. The 13 cities surveyed in 1974 were: Minneapolis, Milwaukee, Cincinnati, Pittsburgh, Oakland, San Francisco, San Diego, Boston, Buffalo, Houston, Miami, New Orleans, and Washington, D.C.

The basic sampling frame for the central cities was the complete file of housing units and persons in group quarters for each of the 26 cities as determined by the 1970 Census of Population and Housing. For the purpose of selecting the sample, each city's housing units were distributed among 105 strata. Occupied units, which comprised the majority, were grouped into 100 strata based on a combination of the following characteristics: type of tenure (house owned or rented), number of household members (five categories), household income (five categories), and race of head of household (white or non-white). Housing units which were vacant at the time of the Census were assigned to an additional four strata distributed on the basis of rental or property value. In addition, a single stratum incorporated certain types of group quarters, such as rooming and boarding houses, religious group dwellings, and college dormitories. In order to insure proper representation in the surveys of persons occupying units built since 1970, a

sample of permits issued for the construction of new buildings within each of the cities was selected. Because the cities surveys are not conducted on a continuing busis, "bounding" techniques were not used. As previously mentioned, sample "selection" in the later city-type surveys utilized similar sampling procedures.

Because the data collected in the National Crime Survey represent the total U.S. population or, in the case of the city surveys, the total population 12 years and older of each city, each record must be weighted to produce universe estimates from the sample cases. These weights are carried in the records and are the numbers which one adds or cumulates to obtain universe estimates of particular events. The weight is a multiplier that indicates how many times a particular record is to be counted. In the diagram below, sample household records are illustrated. An actual weight from the National Sample data indicating the estimated number of households represented by that single case is noted. The first record has a weight of 0844119 (three implied decimals) indicating that approximately 844 households in the universe are represented by that single record.

Household

Household

Household Record

When tabulating the survey data, users may obtain counts of records or universe estimates. The two sample tables shown below are identical, except for the fact that Table A is a COUNT of person records and Table B is an ESTIMATE of persons based on the sum of the person record weights. weights.

Total	160,868,024	100.0	

Data records generated by the National Crime Survey have been weighted to permit estimates of households, persons, incidents, and victimizations. To obtain an estimate of households, the household weight is used as are person weights when estimates of persons are desired. Estimates of incidents and victimizations are not quite so straightforward because of the distinction between household and personal crime.

Household crimes such as burglary and motor vehicle theft are committed against the household or household property, and therefore, the household weight should be applied. Because criminal acts against a household involve a single victimization of the household, counts of victimizations and incidents are the same.

Personal crimes such as assault and robbery are committed against persons. When tabulating personal crimes, the weight in the incident record should be used. Incident records contain the weight of the victim divided by the number of persons reported to have been victimized in the incident. This results in an estimate of incidents as opposed to victimizations. To estimate the number of personal victimizations, the weights in the person records should be aggregated. Remember, the number of incidents for personal crimes is somewhat less than the number of victimizations.

Incidents in the NCS tape files are classified according to the NCS Crime Classification Scheme, in which 36 detailed crime types are identified as being either household or personal crimes. However, users are not restricted to this classification scheme and may, in fact, devise their own classification based on the elements of the reported victimization. The proper application of weights will vary according to the manner in which crimes are classified. For example, the NCS Crime Classification scheme used in the files classifies all larcenies as household crimes. Therefore, estimates of larcenies are based on the household weight. The LEAA printed reports, however, distinguish between household larcenies and personal larcenies. As a result, estimates of victimizations for personal larceny

should be based on the person record weights.

The table which follows summarizes the derivation of the tabulation weights assigned to household, person, and incident records. Definitions of terms used in the tables are given below. The table column "Sample From Which Record Was Selected" documents the use of address lists compiled from the 1970 Census in drawing the samples for these surveys.

BASIC WEIGHT - reflects the selected unit's probability of being included in the sample.

DUPLICATION CONTROL - a factor to compensate for the subsampling of units in instances where the interviewer discovered more units at the address designated for sampling than had been listed in the 1970 Census.

HOUSEHOLD INCIDENTS - crimes committed against the household, such as burglary and motor vehicle theft.

HOUSEHOLD NON-INTERVIEW FACTOR - adjustment to account for some occupied units qualified to participate in the survey but from which interviews were not obtained.

HOUSEHOLD'S PRINCIPAL PERSON - in the case of husband-wife households, the wife was designated to be the principal person; for all other households, the head of household (as determined during the interview) was determined to be the principal person.

INCIDENT WEIGHT ADJUSTMENT - required in those cases where the incident involved more than one victim, thereby allowing for the probability that such incidents had more than one chance of coming into the sample. The weight assigned to the incident record is divided by the total number of persons victimized in the incident.

PERSONAL INCIDENTS - crimes committed against persons, such as assault and rape.

RATIO ESTIMATION FACTOR - adjustments used to bring estimates developed from the sample into adjustment with the complete Census count of such units, adjustments for bringing the survey-derived population or household estimates into accord with whatever independent, post-census estimates of population or households that may have existed at the time of the processing of survey results.

VICTIMIZED PERSON RECORD - record for person victimized or, for household crimes, the person who completes incident report during the interview.

WITHIN HOUSEHOLD NON-INTERVIEW FACTOR - accounts for situations where at least one but not all eligible persons in a household were interviewed.

VI

VII

DATA COLLECTION PROCEDURES

Data Collection

The Questionnaire Forms

Four basic forms are used to collect the required data for the National Crime Survey. These forms are described briefly below and copies are included as part of this documentation.

The Control Card is the basic administrative record for each sample unit. It contains the address of each sample unit and the basic household data, such as the names of all persons living there and their age, race, sex, marital status, education, etc.. Family income, tenure of the unit, and pertinent information about non-interviews are also included on the Control Card. The Control Card serves as a record of visits, telephone calls, interviews, and non-interviews reasons.

The Basic Screen Questionnaire is used to obtain characteristics of all household members twelve years of age and older in a sample unit, as well as to screen for incidents of crime which have been committed against the household and/or household members. The Basic Screen Questionnaire collects information about the general characteristics of the household and each respondent. Household and Individual Screen Questions are designed to elicit information on whether any crimes were committed against the household as a whole or specifically against individual household members.

A Crime Incident Report is used to gather the detailed information about crimes reported in either the Household or Individual Screen Questions. One Crime Incident Report is completed for each incident of crime reported in answer to screen questions. For example, if a respondent says that his pocket was picked once and he was beaten up twice, three Crime Incident Reports, one for each separate incident, is completed. Under certain circumstances interviewers are allowed to report several incidents as a "series" on one Incident Report form. The following conditions must be met before a series incident may be reported:

1) Incidents must be of the same type

2) There must be at least three incidents in the series
 3) The respondent must not be able to recall dates and other details of the individual incidents well enough to have reported them separately.

Prior to an interview visit, each sample unit receives a letter from the Bureau of the Census informing the household about the National Crime Survey. During each enumeration period, initial interviews are conducted during a personal visit at which time interviews are obtained for as many household members as possible. Questions pertaining to the entire household are asked only once. These questions are answered by a household respondent who can reasonably be expected to know the answers to the household questions. Individual Screen Questions on the Basic Questionnaire are asked as many times as there are household members age twelve and older. Information about each household member fourteen years and older is obtained by self-response; however, information about members twelve and thirteen is obtained through a proxy, either the household respondent or some other knowledgeable household member. The average face-to-face household interview lasts thirty minutes. Subsequent interviews may be conducted by telephone if it is more efficient or less costly.

A sample unit for which an interview cannot be obtained is classified into one of three non-interview types. Type A non-interviews consist of households occupied by persons eligible for interview but from whom no interviews are obtained because, for example, no one is found at home in spite of repeated visits or the household refuses to give any information. Because Type A non-interviews are considered avoidable, every effort is made to convert them to interviews. Type B non-interviews are units which are either unoccupied or which are occupied solely by persons ineligible to be interviewed. Type C non-interviewed units were ineligible for the sample. In certain cases the interviewer is unable to obtain an interview for a particular household member in an otherwise interviewed household. This person is classified as a Type Z non-interview.

Interviewers receive extensive training prior to any fieldwork. The quality of interviewing is maintained by periodic direct observation of all interviewers, office edits of completed work, and verificaton of their work by reinterviewing a sample of completed sample units.

Reinterviews measure how well individual interviewers follow procedures. They also measure errors in coverage of the population resulting from missed units, incorrect address listings, etc.. The reinterview procedure is used to evaluate the impact of errors or variations in responses. Results from reinterviews indicate that there is little or a low degree of inconsistency between responses.

VIII

Interviewing

PRETESTING

X

Prior to the interviewing which began in July of 1972, numerous methodological tests, validation studies, and pilot surveys were conducted by the Census Bureau for LEAA. In order to provide some insight into procedures which have been adopted, significant methodological problems examined during the development stage are noted below.

Determining the Optimal Reference Period

One of the major problems identified in the developmental stage was the varying ability of respondents to recall victimization experiences. This variation was seen to be dependent in part on the length of the reference period for which the respondent was asked to recall incidents. It therefore became important to determine the ideal reference period: the length of time which would elicit the most reliable results. Reverse record checks were conducted to discover the degree to whick persons could accurately recall criminal victimization occurring over varying time periods. These reverse record checks consisted of pretesting known victims of assault, robbery, burglary, and larceny selected from police records and compared survey results with police records. The pretests were conducted in Washington, D.C., Baltimore, Maryland, and San Jose, California. Findings indicated that the accuracy of reported incidents increases as the length of the reference period decreases. A reference period of six months was chosen over a twelve month period for the National Sample. A household victimization supplement to the Quarterly Housing Survey (QHS) was used to arrive at a final decision. In this study fifteen thousand housing units were interviewed using a twelve-month reference period. Data were tabulated comparing the estimated number of incidents for the first six months against those for the last six months. Nearly 80% more personal crimes and 55% more property crimes were reported as occurring in the second half of the reference period than in the first half. The results argued for the six-month reference period as the optimal time reference.

Use of One Respondent for the Entire Household Versus Self-Respondent

The question of whether a household respondent should be asked to report for himself and all other household members sixteen and older or whether each qualified household member should be interviewed individually was studied in a pilot household victimization survey in San Jose, California and Dayton, Ohio. The sample of about 5,500 households in each area was divided equally between those using the household respondent technique and the self-respondent technique.

Results demonstrated that the self-respondent method generated substantially greater reporting of incidents.

Telescoping refers to the phenomenon whereby respondents tend to report incidents as occurring either earlier or later than they actually occurred. Telescoping of events into the reference period which actually occurred prior to the reference period may be minimized by a procedure called "bounding". Bounding establishes a time of reference during the first interview in order to avoid duplicate reports of incidents in subsequent interviews. The effect of bounding was examined in the QHS victimization supplement. Both bounded and unbounded interviews were conducted using the household respondent technique. The tabulated survey data were compared on the basis of type of crime and whether the interviews were bounded or not. Results showed that unbounded interviews produced higher victimization rates than bounded interviews and, consequently, that telescoping into the reference period was taking place.

The QHS victimization supplement was also used to test the feasibility of screening for victimization by mail rather than personal visit. Mail screening could substantially lower the cost of fieldwork. Screen questions were mailed to households to determine if any qualified household member had been victimized. A positive response was followed up by a personal interview to obtain detailed information about the incident. Results from the study indicated that respondents are more likely to report a victimization in person than by mail.

۴

The national Crime Survey data are available from the ICPSR as Osiris datasets, each made up of two components. These are a machine-readable dictionary for use in conjunction with the Osiris software package and a separate data file. Unlike most data, which is stored in a rectangular or fixed length record file, the NCS data are stored as hierarchical or structured files with variable length records. Each dataset has three distinct classes of records, with each containing information on different groups of variables. These three classes or levels are: household records, person records, and incident records. This schema corresponds to types of information which were obtained from separate sections of the questionaire. The household level record includes the demographic information about the household. The person records contain the person screen questions, personal characteristic items, and, where

Telescoping

Interviewed by Mail

FILE STRUCTURE

XI

appropriate, the household incident screen questions. The incident level record details the personal or household victimizations. These records are arranged sequentially with each household record followed by the person record of a household member, followed by that person's own incident record or records if any exist. This arrangement, of person then person's incidents continues until all household members and their incidents are reported. This structure is repeated for each household in the sample as illustrated below.

RECORD

OND	
1	HOUSEHOLD # 1
2	HOUSEHOLD # 1'S PERSON # 1
3	HOUSEHOLD # 1'S PERSON # 1'S 1ST INCIDENT
4	HOUSEHOLD # 1'S PERSON # 2
5	HOUSEHOLD # 2
6	1 HOUSEHOLD # 2°S PERSON # 1 1
7	HOUSEHOLD # 2'S PERSON # 1'S 1ST INCIDENT
8	HOUSEHOLD # 2'S PERSON # 1'S 2ND INCIDENT]
9	HOUSEHOLD # 2'S PERSON # 2

This structure allows the creation of many alternative datasets through different combinations of records to define a case. Depending on the level of analysis, a case may be defined as a household, with its members and their incidents, or persons and their incidents, or as an incident and its victim. The data is avaliable in any of these potential forms as fixed record files or in its original structured form.

The Osiris data file can be accessed directly through software packages or programs which do not use the Osiris dictionary by specifing the variable locations. While the following codebook only reports the location of a variable within its record in a hierarchical dataset, a fixed record dataset would be accompanied by documentation identifying locations within that particular form or subset of the data.

۲

[1] Indicates the variable and reference numbers. A Variable and a reference number are assigned to each item in the study. In this codebook, documenting the archived dataset, these numbers are identical. Should the data be formed into a fixed length record file, new variable numbers may be assigned or created. The reference number would remain unchanged and correspond to those in this codebook.

[2] Indicates the abbreviated (24 character maximum) variable label used within Osiris to identify each variable. An expanded version can be found in the variable description list.

[3] Indicates the designation of missing data. In this example, code values equal to two and equal or greater than 6 are missing data (MD=2 OR GE 6). Although these values are defined as within the missing data categories,

XIII

CODEBOOK INFORMATION

The example below is a reproduction of information appearing in the machine-readable codebook for a typical variable. The numbers in brackets do not appear, but are references to the descriptions which follow this example

[4] LOC 292 WIDTH 1

this does not mean that the user should not or can not use these code values in a substantive role if he so desires.

[4] Indicates the sequential location and width of this variable within the record when the data are stored on magnetic tape. In this example, the variable named "POLICE INFORMED?" is one column wide and located in the 292nd column within the INCIDENT RECORD. Other variables will be in this same location in household and person records. In a fixed length record file of this data the locations will be different.

[5] Indicates the full text of the question supplied by the original collectors of the data. This is the wording used on the original questionnaire.

[6] Indicates the code values occurring in the data for this variable.

[7] Indicates the meaning of the codes.

[8] Unlike many codebooks, this one does not include frequencies. This is because national complete data is arranged in 18 separate datasets, one for each collection guarter.

Ť

The ICPSR has added to the data (within each collection quarter) a series of identifcation variables. A sequential household identification number was added for each household (V1201), person (V2001), and incident (V3001) record. A sequential person identification number was added within each household for each person (V2002) and incident (V3002) record. A sequential was also added for multiple victimizations. In addition, in the National Sample a constant collection year and quarter identification number was attached to each household (V1002), person (V2003), and incident (V3004) record. In the Cities Sample the same variables had a year and unique city identification number attached. These variables serve as "link" variables between

records, as required in a Type Five OSIRIS dataset.

Every variable has been checked for bad characters and wild or undocumented codes. Usually, wild codes were not changed but were included within the range of OSIRIS missing data values. If this was not possible, inappropriate values were recoded in order to include them in the range of missing data values. With the exception of Interviewer Identification, all alphabetic code values were recoded with numeric values. All possible code values are documented for each variable.

The National Crime Survey instrument underwent slight changes during the course of the survey. For example, in some cases response categories were changed, question wording was altered, and questions were added or deleted. A standard format was imposed on the data so that only a single piece of documentation would be necessary to use any of the National Sample collection quarters or any of the Cities Sample files. Therefore, the user is strongly urged to carefully review each variable used in analysis in order to determine the applicable code values.

# INCIDENT WEIGHT

Incident weight is used to tabulate the incident data. The weight contains three implied decimal places. Incidents involving connercial victimizations in which respondent was not personally victimized have a weight of 000000.

ADDRESS SEGMENT See: Segment

### AGE

Age is determined by asking respondent for month, day, and year of birth. From this birthdate, the interviewer determines the respondent's age as of the last day of the month previous to the interview month. The respondent is asked to verify the calculated age. Age is important to determine interview eligibility and type of interview to be conducted:

- 1)
- 3)
- otherwise unavailable 5)

questions

AGGRAVATED ASSAULT As used in the LEAA published reports, an attack with a weapon resulting in any injury and attack without a weapon resulting either in serious injury; e.g., broken bones, loss of teeth, internal injuries, loss of consciousness; or in undetermined injury requiring 2 or more days of hospitalization. Also includes attempted assault with a weapon. It does not include attacks accompanied by theft. See also: Assault

ALPHABETIC SUFFIX In the Cities Sample, assigned to the serial number of the original sample unit to identify EXTRA units discovered in unit-type segments or found at addresses in other segment types which required listing. See also: Serial Number, Extra Units, Segment

ARMED FORCES See: Military Status

ASSAULT One of the six major types of crime covered by the national crime survey. In the NCS Classification Scheme, assaults are subcategories of the broader term of assaultive violence

### 108

NATIONAL CRIME SURVEY GLOSSARY

under 12 - not interviewed; number of such children is determined from household respondent 2) 12 and older - universe for interviews 12 and 13 - proxy interview conducted 14 and older - interviewed individually, unless ill or 16 and older - interview includes employment status

(with or without theft). In these subcategories of serious assault, minor assault and attempted assault, the term assault refers to the presence or absence of physical injury.

In the LEAA published reports, assault is defined as an unlawful physical attack, whether aggravated or simple, by one person upon another. This definition excludes rape and attempted rape, as well as attacks including theft or attempted theft, which are classified as robbery. See also: Crimes, Serious Assault, Minor Assault, Aggravated Assault, Assaultive Violence,

Injury

# ASSAULT, MINOR See: Minor Assault

ASSAULT SERIOUS See: Serious Assault

# ASSAULTIVE VIOLENCE

All of the following crimes against persons: rape, attempted rape, serious assault (with or without a weapon), minor assault, attempted assault (with or without a weapon). See also: Assault

# ATTACKED

For a victim to have been attacked, there must have been some form of actual physical contact between victim and offender. If something was thrown at the victim but didn't hit him, or if he was shot at but not struck by the bullet, he was not considered to have been attacked, but threatened. See also: Threatened

# ATTEMPTED FORCIBLE ENTRY

A form of burglary in which force is used in an attempt to gain entrance; e.g., by breaking a window or slashing a screen. The same definition is used in the LEAA published reports and the NCS Classification Scheme. See also: Burglary, Forcible Entry, Unlawful Entry Without Force

# ATTITUDE QUESTIONNAIRE

Used to obtain information about household and individual activity patterns; and about thoughts, feelings, and attitudes towards crime, police, etc. The Attitude Questionnaire was administered during one interview month of 1972 (one panel of 5,000 households) in the National Sample. Because of the small sample size and the fact that the Attitude Supplement for the National Sample has been discontinued, this file has not been reformatted and is not

# (CONTINUED)

request from LEAA.

AUTO THEFT See: Motor Vehicle Theft

BASIC SCREEN QUESTIONNAIRE Used to obtain characteristics of the household and individual household members 12 years of age and older, as well as to screen for incidents of crime against the household and/or household members. It has four sections: 1) cover page for identification items and general information, 2) personal characteristics items for obtaining general information on persons, 3) household screen questions to elicit information on whether any household crimes were committed during the reference period, and 4) individual screen questions to elicit information on whether any crimes against individual household members were committed during the reference period. See also: Household Screen Questions, Information Screen Questions, Questionnaire Forms, Interviewing Sequence

# BIAS

Ĵ,

Systematic error introduced by selecting items from a wrong population, favoring some of the elements of a population, or poorly phrasing questions. It includes both sampling bias and non-sampling bias. See also: Standard Error, Survey Error

BOUNDING PROCEDURE A technique used in the National Sample to establish a time of reference during the first interview to avoid recording duplicate reports of incidents in subsequent interviews. A bounding interview is conducted at the first visit to the household. Data collected are not tabulated, newly reported incidents are compared with descriptions of incidents reported in the previous interview. The incident is eliminated if the interviewer determines that the same incident has been reported in the previous interview period. The bounding technique was not used in the Cities Sample, since they were not recurring and reference periods used in repeat Cities Surveys were not consecutive. See also: Reference Period, Bounding Schedule

BOUNDING SCHEDULE In the 1972 and the first half of 1973 NCS National Sample interviews, the first-time interviews were unbounded. Bounded interviews started in January 1973 and July 1973 for

# 110

offered as a standard product. Also, it does not contain any victimization data. The file is available on special

the first rotation groups; thus, by July 1973, bounded interviews were being conducted in all returning rotation groups. Because of the large number of unbounded interviews, the 1972 National Sample files are not being released.

See also: Sample Rotation, Bounding Procedure

# BURGLARY

One of the six major types of crime covered by the National Crime Survey. Burglary refers to the following crimes against households: forcible entry and unlawful entry without force, usually but not necessarily attended by theft, and attempted forcible entry. The same definition is used in the LEAA published reports and the NCS Classification Scheme. See also: Crimes, Forcible Entry, Unlawful Entry Without

Force, Attempted Forcible Entry

# CVS

See: Commercial Victimization Survey (CVS)

# CENSUS TRACT

Small, relatively permanent areas into which large cities and adjacent areas are divided for the purpose of providing comparable small-area statistics over time. Tracts conform with county lines and are often homogeneous in character. Census tracts are designed, insofar as possible, to contain about 4.000 to 5.000 persons.

See also: Standard Metropolitian Statistical Area

# CENSUS, U.S. BUREAU OF

The division of the U.S. Department of Commerce responsible for conducting the National Crime Survey Victimization Program for the Law Enforcement Assistance Administration (LEAA).

# CENTRAL CITY

The incorporated city (or cities) which is central to an urbanized area and/or a Standard Metropolitan Statistical Area. It is bounded by city limits. A central city or the combined central cities must have a population of 50,000 or more. The 26 cities surveyed in the NCS Cities Samples were central cities.

See also: Urbanized Area, Standard Metropolitan Statistial Area, Place Description Code

CENTRAL CITY SAMPLE See: Cities Sample

CHECK DIGIT

# (CONTINUED)

In the National Sample, the control digit is computed on the nine digits of the PSU, segment number and sample number. The check digit is part of the control number which uniquely identifies a sample unit. In the Cities Samples, the check digit is the sixth digit of the serial number and is computed on the 3 digits of the PSU and the first 5 digits of the serial number. See also: Control Number

# CITIES SAMPLE

r.

One of two major components in the National Crime Panel program. Approximately 12,000 household units in each survey city were designated for the sample. In 1972, eight "impact" cities designated as part of an extensive federally-funded crime prevention program were surveyed. These cities are Atlanta, Baltimore, Cleveland, Dallas, Denver, Newark, Portland, and St. Louis. In 1973, the nation's five largest cities, Chicago, Detroit, Los Angeles, New York, and Philadelphia - were surveyed; in 1974, thirteen other major cities were covered. These included Boston, Buffalo, Cincinnati, Houston, Miami, Milwaukee, Minneapolis, New Orleans, Oakland, Pittsburgh, San Diego, San Francisco, and Washington, D.C. In 1975, the five largest and eight impact cities were surveyed a second time. See also: Cities Sample Design, National Sample, Central City, Five Largest Cities, Impact Cities, Sample, National Crime Panel

CITIES SAMPLE DESIGN The basic frames from which the samples were drawn for the Cities Sample were the complete housing inventories for each city, as determined by the 1970 Census of Population and Housing. For the purposes of sample selection, each city's housing units were distributed among 105 strata on the basis of various characteristics. Occupied units, which comprised the majority, were grouped into 100 strata defined by a combination of the following: type of tenure (owned or rented); number of household members (five categories); household income (five categories); and race of head of household (white or nonwhite). Housing units vacant at the time of the Census were assigned to an additional four strata, where they were distributed on the basis of rental or property value. Furthermore, a single stratum incorporated certain types of group guarters, such as rooming and boarding houses, religious group quarters, and college dormitories.

# COMMERCIAL VICTIMIZATION SURVEY (CVS) The connercial victimization portion of the National Crime Program focuses on measuring robbery and burglary incidents against business establishments during the 6-month period preceding interview. Like the NCS, the CVS uses two samples, the National and Cities Samples. Reformatted tapes and user publications are not presently available for the

A calendar guarter of the year during which interviews are conducted in the National Sample. The differing six-month reference period for each month's interviews result in data on crimes that occurred during an 8-month period. For example, interviews conducted during the first collection quarter of 1973 reflect crimes occurring between July 1, 1972 and February 28, 1973. This concept is used for processing purposes only, not for data tabulations. See also: Data Quarter, Reference Period, Complete Sample Files

CLUSTER See: Segment

COLLECTION QUARTER

Working Without Pay - persons working without pay on a farm or business operated by a related member of the household. Room and board and a cash allowance are not counted as pay for these family workers; however, if the worker receives money which is definitely considered to be wages for work performed, they should be considered a private employee. See also: Industry Code, Occupation Code

non-profit organizations. Government Employee - persons who work for any branch of federal, state or local governments. It includes persons who were elected to paid federal offices and members of the Armed Forces. Also includes employees of international organizations and employees of foreign governments. Self-Employed - persons who work for profit or fees in own business, farm, shop, office, etc. Does not apply to managers, superintendents, or other executives hired to manage a business.

Categories include: Private Employee - persons who work for a private employer for wages, salary, commission, tips, piece-rates, or pay in kind: this applies regardless of the occupation at which the employee worked, whether general manager, file clerk, or porter. Also includes persons working for pay for settlement houses, churches, unions, and other private

CVS portions of the National Crime Panel program of surveys. See also: National Crime Survey, National Crime Panel

COMPLETE SAMPLE FILES NSC tape files containing data for both interviewed and noninterviewed households, victims and nonvictims. The files are hierarchical in structure, consisting of three record types: household records, person records and incident records (including series incidents). The National Complete Sample files are arranged by the quarter in which the interviews were conducted (collection quarters). The Cities Complete Sample files are available for each survey city.

See also: Collection Quarter

CONFIDENCE INTERVAL

An interval which can be constructed from a sample estimate and an estimate of its standard error. It can be stated with prescribed confidence that this interval contains the average result of all possible samples (for a given sampling rate). For example, if all possible samples were selected, surveyed under the same conditions, and an estimate and its estimated standard error were calculated from each sample, then approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average value of all possible samples. Such an interval is called a 95% confidence interval. If there is no bias introduced by the sampling, surveying, and estimation procedures, the average value for all samples would be equal to the value which would be obtained by a complete census of the population. See also: Estimate, Standard Error, Sampling Variability,

Census

CONFIDENTIALITY

The law (U.S. Code 42, Section 3771) provides that all information given to the U.S. Bureau of the Census for this survey must be held in confidence and may be used only for statistical purposes. The Bureau may not release any statistics which might disclose the identity of any individual or household. This protection explains why public data often do not provide the level of detail many researchers might wish. Current restrictions prohibit identification of areas containing fewer than 250,000 persons, when releasing individual or microdata. See also: Universal Area Code (UAC)

CONTROL CARD

The control card (or cover sheet) is one of four basic forms used to collect the NCS data. It is the first form the

# CRIME INCIDENT REPORT

COUNTY CODES (197)

victimization includes information on the presence or absence of specific elements in the incident, it is possible to construct several different types of classification schemes. The National Crime Survey (NCS) Classification Scheme consists of 36 detailed crime types. The NCS Classification Scheme allows for combination events; e.g., when a person is assaulted and robbed at the same time. The 36 types of crime codes are used to categorize incidents in the NCS tape files. Another common crime classification system is the Uniform Crime Report (UCR) Classification system, used by the

elements recorded on a NCS Crime Incident Report form may be

combined to determine the proper UCR Classification although

attempts to compare NCS data with FBI data are inappropirate

because of substantial differences between the two programs.

Federal Bureau of Investigation (FBI). The individual

See also: Crimes, NCS Classification Scheme

Because the Crime Incident Report completed for each

CRIME CLASSIFICATION

In the NCS Cities Sample and National Sample, three-digit County Codes are used to identify the County in which a household is located. County Codes are only unique within a given state. See also: State Codes (1960)

CONTROL NUMBER Assigned to each sample unit. In the National Sample, the control number is composed of four elements: the PSU number, the segment number, Check Digit, and Serial Number. For the Cities Sample, the control number is composed of five elements: the PSU number, serial number, panel number, household number, and segment number. See also: PSU, Sequent Number, Check Digit, Serial Number, Identification Code, Sample Designation

interviewer completes during the initial interview and is updated on each subsequent interview as long as the household is in the sample. It contains the address of each sample unit and the basic household data, such as the names of all persons living there and their age, race, sex, marital status, education, etc. In addition, such items as family income, tenure of the unit, and pertinent information about noninterviewed units are also included on the Control Card. The Control Card also serves as a record of visits, telephone calls, interviews, noninterview reasons, etc. See also: Interviewing Sequence, Questionnaire Forms

### (CONTINUED)

# (CONTINUED)

used to gather the detailed information about crimes reported in either the Household or Individual Screen Question section of the Basic Screen Questionnaire. One Crime Incident Report is completed for each incident of crime reported in answer to the screen questions. Under certain circumstances, interviewers are allowed to report several incidents on one form -- so-called "series" incident reports are made in these cases. See also: Questionnaire Forms, Series Incident Report, Interviewing Sequence

# CRIMES

The National Crime Surveys focus on measuring the extent of victimization ascribable to the major crimes commonly referred to as assault, rape, burglary, larceny, and motor vehicle theft. The surveys do not provide measures for other offenses such as murder, kidnapping, shoplifting, drunkenness, gambling, etc. See also: National Crime Survey, Crime Classification, NCS Classification Scheme

DATA QUARTER Due to the differing six-month reference period for National Sample interviews each month, data from eight months of interviewing are required to produce a quarterly estimate, based on month of occurrence, which is referred to as the Data Quarter.

ED See: Enumeration District (ED)

EDUCATION Current education level of household members 12 or older. Respondents are asked the highest grade or year of regular school attended, and whether that year was completed. Regular schools include all graded public, private, parochial schools, colleges, universities, and professional schools which advance a person toward an elementary or high school diploma, or a college degree. Regular schools do not include vocational, trade, business, correspondence, or other specialized schools, unless credits obtained are accepted in the regular school system. For persons still attending regular school, highest grade attended is the one in which they are currently enrolled. See also: Educational Attainment

EDUCATIONAL ATTAINMENT

See also: Collection Quarter, Reference Period

Recorded variable for use in LEAA published reports. The highest grade attended and whether or not that year was

completed. Educational attainment is classified as follows: Never attended or Kindergarten, Elementary, High School, College, and N.A. Post-graduate work is coded as college. See also: Education

# EMPLOYED

All persons 16 years of age and over currently working at a job, or with a job but not now at work. See also: Major Activity

# EMPLOYMENT STATUS

Recoded variable for use in LEAA published reports. Categories are: Age under 16, in Armed Forces, employed, unemployed, keeping house, in school, retired, other. See also: Major Activity

# ENUMERATION

The process of obtaining information about selected units of study in a survey or census. See also: Census

# ENUMERATION DISTRICT (ED)

A small geographic area with well-defined boundaries set up for the 1970 Census and containing about 250 households. Numerous EDs are spread over an entire PSU. Segments of about 4 households in clusters are chosen from EDs for interview, in the NCS National Sample. See also: Primary Sampling Unit (PSU), Segment, National Sample Design

# ENUMERATION PERIOD

The length of time allotted to interviewers for completing their assigned workload for a survey or census; commonly referred to as the interview period. In the National Sample, households are enumerated during the first two weeks of every month. In the Cities Sample, enumeration was generally finished in 10-12 weeks in each city. See also: Household Status, Enumeration

ERROR See: Standard Error

ERROR RATE See: Survey Error

# ESTIMATE

A numeric value obtained from a sample used to describe the measurement which would be obtained if a complete census were carried out. An estimate of a total for a population

# (CONTINUED)

is obtained by multiplying a sample count by a systematically designed weight which has the effect of inflating the sample count to represent the total population. Basically, the sample count is inflated by the reciprocal of the probability of selection. Each survey estimate has its own variance and standard error. See also: Weight, Population, Sample, Variance, Standard Error, Confidence Interval, Sampling Variability

# ETHNICITY

EXTRA UNITS

r

Household respondent's statement of his or her family's national or major multi-national area of derivation: e.g., Spanish, Irish, Chinese, German, etc. Adopted, foster, step-children, and children with one parent not a member of the household are asked this question separately. When both parents are household members, the child's origin may be marked without asking. Multiple origins with one part Spanish are classified under the appropriate Spanish category. Respondents stating only "Negro," "Afro-American," or "Colored" are listed as Negro. See also: Race

Housing unit or OTHER unit which is discovered at time of interview or during updating and is not already entered on the listing sheet for the segment. 1) a. In area segments, EXTRA units must be in the same structure or on the same property as the sample unit being interviewed. b. In Special Places within Area segments, an EXTRA unit must be within the specific address of the original unit. In Address (or Unit), Cen-Sup, and Special Place 2) segments. EXTRA units must be within the specific address of the sample unit being interviewed, but need not be within the same structure or on the same property. In Permit segments, EXTRA units must be within the 3) specific address of the sample unit being interviewed and must be within the same structure. When housing units or OTHER units which qualify as EXTRA units are discovered, they are interviewed and allocated to the sample without bias. See also: Segment, Housing Unit, Other Unit, Special Places, Listing, Household Status, Updating

FAMILY INCOME The sum of income received by each member of a family living in a sample housing unit. The income may include wages, salaries, net income from business or farm, pension,

dividends, rent or any other money income, (not identified as income are such things as room and board, insurance payments, lump sum inheritances, occassional gifts, money from selling property, withdrawals from savings accounts, or tax refunds) for the 12-month period immediately preceding the month of interview. It is not the calendar year unless the month of interview was January. For housing units in the National Sample which are interviewed more than once, this question is asked only during the first, third, fifth, and seventh interviews.

# FIVE LARGEST CITIES

In the NCS, these cities were New York, Philadelphia, Los Angeles, Chicago, and Detroit, the nation's five most populous cities according to the 1970 Census. They were surveyed as part of the Cities Sample over a ten-week period beginning in January 1973. These cities were resurveyed during January, February, and March of 1975. See also: Cities Sample

### FORCIELE ENTRY

A form of burglary in which force is used to gain entrance; e.g., by breaking a window or slashing a screen. Forcible entry may or may not be accompanied by theft or property damage. The same definition is used in the LEAA published reports and the NCS Classification Scheme. See also: Burglary, Unlawful Entry Without Force, Attempted

Forcible Entry

GOVERNMENT WORKERS See: Class of worker

# GROUP QUARTERS

Census term used to describe quarters occupied by 5 or more persons unrelated to the head of household. Quarters with no designated head but with 6 or more unrelated persons are also group quarters. Some quarters occupied by fewer than six persons may also be group quarters by definition; e.g., living guarters in dormitories occupied by students. For both the National and Cities samples, group quarters were selected from Census listings.

See also: Housing Unit, Other Unit, Special Place

# HEAD CF HOUSEHOLD

One person in each household designated as head, usually the person reported by the members of the household to be the head. Usually the chief breadwinner of the family. See also: Relationship to Household Head, Principal Person

# (CONTINUED)

# HOUSEHOLD

HOUSEHOLD CRIME See: Household Victimization

HOUSEHOLD INCIDENT See: Household Victimization

HOUSEHOLD LARCENY See: Larceny

# HOUSEHOLD MEMBER

Persons in a sample unit are members of the household if: 1) their usual place of residence at the time of the interview is the sample unit, and 2) they have no usual place of residence elsewhere. Usual place of residence must be specific living quarters held by the person, to which he is free to return at any time, and at which he usually lives and sleeps. Household members not only include members of the family, but may also include: lodgers, servants, other employees who live in the unit and consider it their usual place of residence. Usual residents also include persons who live in the sample unit but are temporarily absent. Armed forces members are considered household members if they are stationed near-by and usually sleep in the sample unit. Students attending school away from home are not considered household members at their See also: Household, Sample Unit

# HOUSEHOLD NUMBER

Identifies the sequence of households that occupy a particular address. For example, if a new family moves into a sample unit being interviewed for a second time, the household number will be "2" indicating that this is a different household from that previously interviewed. In the Cities Sample, only sample units in the 5 largest and 8 impact cities were reinterviewed for a second time (in 1975). See also: Household Status

# HOUSEHOLD RESPONDENT

Questions pertaining to the entire household are asked only once of any knowledgeable adult member of the household. Such guestions include the Control

A group of occupants of a sample unit who meet the criteria See also: Sample Unit, Household Member

Card items, Household Attitude Questions, and Household Screen Questions. The interviewer is instructed to interview the most knowledgeable household member; that is, the one that appears to know -- or who could reasonably be expected to know -- the answers to the household questions. Most frequently, this is the head of the household or the spouse of the head. Since August 1975, the household respondent has been required to be at least 18 years of age.

See also: Household Attitude Questions, Household Screen Questions

# HOUSEHOLD SCREEN QUESTIONS

These questions ask about any crimes against the household, such as actual or attempted break-ins, theft of household goods, and auto thefts. These screen questions are asked only once of the household respondent and are used to determine whether a Crime Incident Report should be completed. See also: Household Respondent, Basic Screen

Questionnaire, Individual Screen Questions, Crime Incident Report

# HOUSEHOLD STATUS

Consists of the following categories:

1) Same household as last enumeration - if the same household was interviewed during the previous interview period.

2) Replacement household since last enumeration if the former occupants have moved and the unit is now occupied by a new household.

3) Previous non-interview or not in sample before -- for an interviewed unit that was previously non-interviewed for any reason, for a unit in its first period of enumeration, or for an EXTRA unit being interviewed for the first time. See also: Extra Unit, Enumeration

# HOUSEHOLD VICTIMIZATION

A specific criminal act as it affects the household. Each criminal act against a household is assumed to involve a single victim: the affected household; therefore, the terms household victimization and household incident are synoymous. As used in LEAA published reports, crimes against households include burglary, household larceny, and motor vehicle theft. If any household member is attacked or threatened during the crime, it is considered a personal crime.

See also: Personal Victimization, Household Screen Questions

# (CONTINUED)

HOUSEHOLD WEIGHT In the National Sample, the household weight is based on the product of a "principal persons weight" and a third stage ratio-factor. The weight for the principal person in husband-wife households equals the weight for the wife, excluding the within-household non-interview adjustment. For non-husband-wife households, the principal person weight equals the weight for the household head, excluding the within- household non-interview adjustment. In the Cities Sample, the household weight consists of the basic weight of the household in the sample plus adjustments for noninterviewed households, subsampling, and various ratio estimates. See also: Weight, Person Weight, Incident Weight, Non-interview Adjustments

# HOUSING UNIT

A group of rooms or a single room, occupied as separate living quarters. Separate living quarters exist when the occupants do not live and eat with any other persons in the structure, AND when there is either direct access from the outside or through a common hall, OR complete kitchen facilities for this unit only. Vacant rooms or groups of rooms, which are intended for occupancy as separate living quarters are also considered housing units. A unit has complete kitchen facilities when it has an installed sink with piped water AND a range or cooking stove AND a mechanical refrigerator. All units in the National and Cities samples are defined as either being a housing unit or an OTHER unit. See also: Group Quarters, Living Quarters, Extra Unit, Household, (Type of) Living Quarters, Occupied Housing Unit, Vacant Housing Unit, Other Unit

IDENTIFICATION CODE A sample designation and control number assigned to each

÷۳

IMPACT CITIES Eight cities designated by the Law Enforcement Assistance Administration as part of an extensive federally-funded crime prevention program. The cities are: Atlanta, Baltimore, Cleveland, Dallas, Denver, Newark, Portland, and St. Louis. These cities were surveyed as part of the Cities Sample from July through September in 1972 and were resurveyed in March through May of 1975.

# INJURIES SUFFERED

Includes any and all PHYSICAL (bodily) damage experienced by the victim from an attack during a crime incident, such as broken bones, bruises, cuts, internal injuries, and so on. Does not include emotional upset. See also: Injury

# INJURY

Bodily hurt or damage sustained by a victim as a result of criminal assault. The types of injuries suffered are used to distinguish between serious and minor assaults. Serious injuries include knife or gunshot wounds, broken bones, loss of teeth, and loss of consciousness. Minor injuries include bruises, black eye, cuts, scratches, swelling. Other injuries that can't be identified as serious or minor are distinguished by the amount of hospitalization required. See also: Serious Assault, Minor Assault

INTERVIEW PERIOD See: Enumeration Period

# INTERVIEW PROCEDURES

Before the scheduled field interview, a letter informing each household about the NCS and the interviewer's impending visit, was sent to each sample unit. The initial contact with the household is a personal visit, at which time interviews are obtained for as many household members 12

# (CONTINUED)

years or older as possible. Subsequent to the initial personal interviews, interviewers are allowed to make telephone callbacks to obtain interviews with the remaining eligible household members, but return personal visits are recommended whenever possible. See also: Interviewing Sequence, Non-interview Procedures

INTERVIEW, TYPE OF See: Personal Interviews, Telephone Interviews, Self

INTERVIEWING SEQUENCE The general interview sequence for the NCS National Sample is to (1) fill a Control Card for the Unit, (2) ask all appropriate personal characteristics and screen questions (including Householā Screen Questions) on the Basic Screen Questionnaire of the household respondent, (3) get detailed reports on the Incident Report of any incidents of crime mentioned by the household respondent in the Basic Screen Questionnaire, and (4) ask all appropriate personal characteristics and screen questions and fill in incident reports, if any, for each subsequent eligible household member. An entire interview is completed for a household member before proceeding with the next person. The general interview sequence for the NCS Cities Sample was to (1) fill a Control Card for the unit, (2) then, if an Attitude Questionnaire was to be filled for the unit, ask all appropriate attitude questions of one respondent, (3) next, Basic Screen Questionnaire of the same respondent, and (4) get detailed reports on the Incident Report of any incidents of crime mentioned in the Basic Screen Questionnaire. An entire interview was completed for a household member before proceeding with the next person. See also: Interview Procedures, Control Card, Basic Screen Questionnaire, Crime Incident Report

# LAND USE

r.

For rural areas, land use may be either "farm" or "non-farm" as defined in the 1970 Census. 1) Farm use - either of two sets of conditions must be met: a) Property of 10 acres or more AND \$50 or more income from sales of farm products NR Froperty of less than 10 acres AND \$250 or more b) income from sales of farm products.

- 2)

met:

Respondent, Proxy Respondent

Non-farm use - either of two sets of conditions must be

a) Property of 10 acres or more AND less than \$50 income from sales of farm products

OR

b) less than 10 acres property AND less than \$250 income from sales of farm products

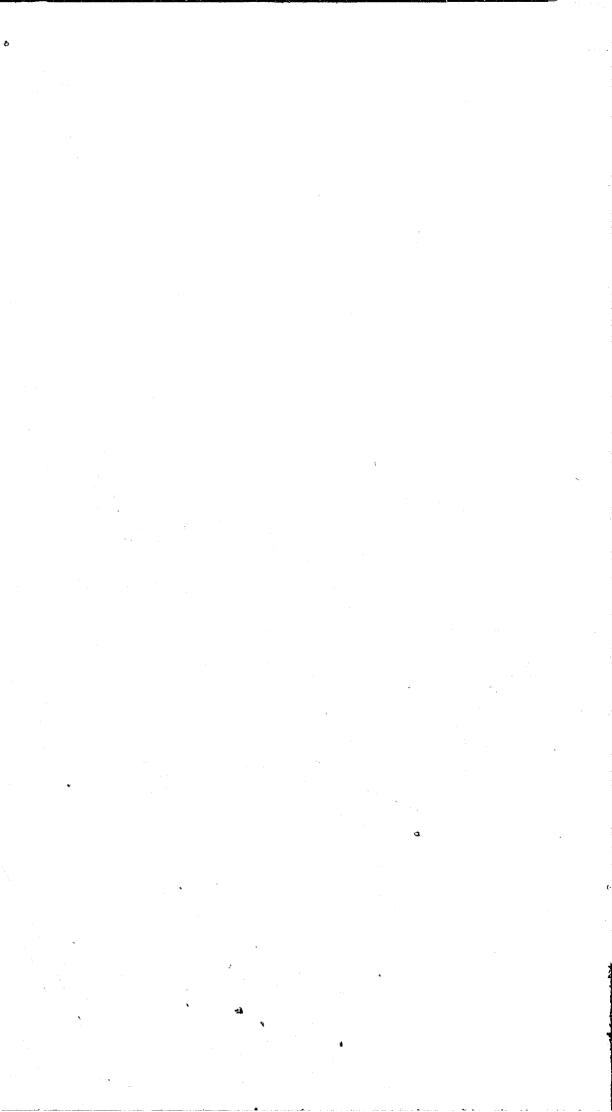

In determining size of property, all tracts of land which the respondent considers to be on the same property, farm, ranch, estate, etc. are included. If the respondent is renting the property for cash, only the acreage specifically paid for is included. Income from sales of farm products refers to the GROSS amount received from the sale of crops, vegetables, fruits, nuts, livestock, milk, wool, poultry, eggs, nursery and

forest products, etc. produced on the land in question during the 12 months prior to the interview. Value of products consumed on the property is not included. Efforts are made to obtain this information for Type A and Type B non-interviews as well. See also: Rural, Urban

# LARCENY

One of the six major types of crime covered by the National Crime Survey. As used in the NCS Classification Scheme, larceny is defined as theft or attempted theft (except of autos) without direct contact between victim and offender. Subcategories of larceny are based on the amount of cash and/or property taken. The LEAA published reports distinguish between household and personal larceny. Household larceny is defined as the theft or attempted theft of property or cash from the home or its immediate vicinity. Forcible entry, attempted forcible entry, and unlawful entry are not involved. Personal larceny, also referred to as personal crimes of theft, involves the theft of property or cash, either with contact (but without force or threat of force) or without direct contact between victim and offender. Personal larceny with contact involves the actual or attempted theft of purse, wallet, or cash by stealth directly from the person of the victim, but without force or threat of force. Personal larceny without contact involves theft or attempted theft, without direct contact between victim and offender, of property or cash from any place other than the victim's home or its immediate vicinity. See also: Crimes

LAW ENFORCEMENT ASSISTANCE ADMINISTRATION (LEAA) Established as part of the Department of Justice by the Omnibus Crime Control and Safe Streets Act of 1968. As one of its roles, LFAA has the authority to provide timely data on crime and its impact on society through reliable statistical programs. LEAA administers and funds the

# CONTINUED

# 20F3

# National Crime Panel program. See also: National Crime Panel

# LINE NUMBER

A two-digit number assigned during the interview to identify each individual in a household. Line numbers serve to link Control Card data to the Personal Characteristics data, and both of these to the Incident Report data.

# LISTING

Major procedure preparatory to interviewing units. All listing is done by the interviewer before contacting any sample units. In general, listing is done by observation, and consists of noting the location of every place where people live or might live within a given address or segment, using street names, house numbers, apartments numbers, and any other descriptive information necessary to fully specify unit locations. Listing procedures are detailed and extensive, and vary somewhat depending on the type of segment. See also: Updating, Segment, Extra Units, Merged Units

# LIVING QUARTERS

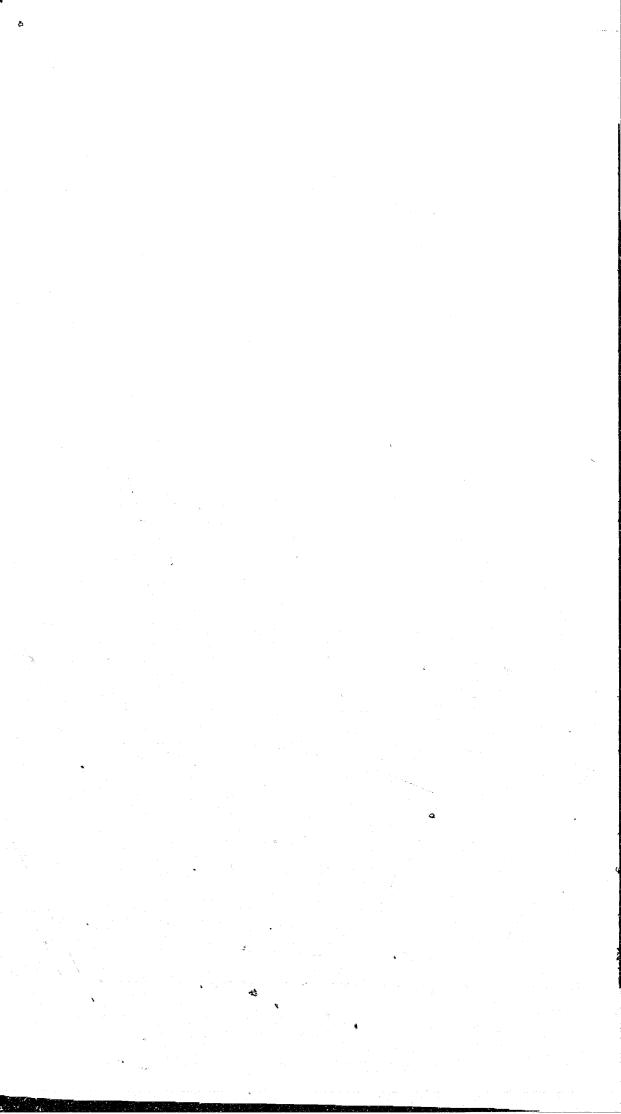

General term for structures occupied or intended for human occupancy; classified as either housing units or OTHER units.

See also: Housing Unit, Other Unit, (Type of) Living Quarters, Place of Residence, Special Places, Tenure

# (TYPE OF) LIVING QUARTERS

Living quarters are classifed as either housing units or OTHER units. Six types of housing units are distinguished for NCS:

- 1) House, apartment, flat -- includes such housing units as an apartment over a garage or behind a store, janitor's quarters in an office building, and housing units in converted barns or sheds, as well as ordinary houses and apartments.
- Housing unit in a non-transient hotel, motel, etc. --21 all separate living quarters in non-transient hotels, notels, etc. are housing units by definition.
- Housing unit permanent in transient hotel, motel, etc. 3) -- occupied or intended for occupancy by permanent guests or resident employees.
- Housing units in rooming house. 4)
- Mobile home or trailer -- includes those with permanent 5) foundations. 61
- Housing unit not specified above
- Four types of OTHER units are distinguished for NCS:

- 1) Quarters not housing unit in rooming or boarding house.
- 2) Unit not permanent in transient hotel, motel, etc. -quarters not occupied or intended for occupancy by permanent quests or resident employees.
- 3) Vacant tent site or trailer site.
- 4) Not specified above -- for example, beds in flophouses, units for students in dormitories, and units in communes.
- See also: Housing Unit, Other Unit, Living Quarters, Special Places, Transient/Nontransient

LOOKING FOR WORK See: Major Activity

# MAJOR ACTIVITY

Used in determining whether household members are employed. unemployed, or not in the labor force. For the LEAA published reports, the major activity categories are used in a recode to obtain an employment status variable consisting of: Age under 16, in Armed Forces, employed, unemployed, keeping house, in school, retired, and other. The major activity categories are:

Working -- person working for pay or profit, working without pay on family farm or business, or on jury duty if being paid. Persons doing the following types of unpaid work are not considered "working": 1) unpaid work which does not contribute to the operation of a family farm or business, 2) unpaid work for a related member of the household who does not operate a farm or business, but is himself a salaried employee, 3) unpaid work for an unrelated member of the household, 4) unpaid work for a relative not in household, 5) volunteer work without pay for an organization, 6) time for which person is paid while on temporary duty in the Armed Forces reserve or National Guard, 7) persons with investments only, 8) work relief programs.

With Job But Not At Work -- temporarily absent from a job or business for such reasons as illness, vacation, bad weather, labor dispute, temporary layoff, etc.

Looking For Work -- in the market for a job or trying to start a business or profession.

Keeping House -- persons primarily occupied with their own housework including those that indicate that keeping house would have been their chief activity except for their own temporary illness or absence from home. This category applies to any person who says they spend most of their time managing or being responsible for the care of the home and/or the children. More than one person in a household may be marked as "keeping house." Going To School -- persons attending any kind of public or

private school, including trade or vocational schools in

# (CONTINUED)

which students receive no compensation in money or kind. Unable to Work -- because of long-term physical or mental illness or disability, person is unable to do any kind of work. Retired -- any person who says he is retired. If person is simply working shorter hours because of retirement, the person is marked as "working." Other -- persons whose activity or status cannot be described by codes defined above. This includes persons in the Armed Forces. See also: Employed, Industry Code, Occupation Code, Unemployed, Recode

# MARITAL STATUS

Marriage status may be: 1) Married - includes common-law marriage

- 2) Widowed
- 3) Divorced
- etc.) are recorded as married.
- law marriage.

# MEDICAL ATTENTION

Refers to care given by a trained professional medical person such as a doctor, nurse, dentist, etc., either on the scene of a criminal incident, at an office, in a hospital or clinic, or elsewhere.

MEDICAL EXPENSES, TOTAL AMOUNT OF Total known amount of medical expenses which are a direct result of a person's injuries sustained in a criminal incident. Includes: doctor and hospital bills, surgeon's fees, emergency room expenses, ambulance service, services of a physical therapist and dentist's fees. Also includes expenses for medicine and any kind of special devices or aids the victim was forced to obtain as a result of his injury, such as braces, dentures, eyeglasses, wheelchair, and artificial limbs.

# MERGED UNITS

٣

\$

Sample unit which has combined with another unit after the unit has been initially listed. Merged units are interviewed if the first of the merged units listed is in

4) Separated - those married persons who have a legal separation or who have parted because of marital discord, but have not yet obtained a divorce. Those who have parted temporarily for reasons other than marital discord (such as employment, Armed Forces, 5) Never Married - includes all children under 14, and persons whose only marriages have been annulled and people living together who make no mention of common-

the sample for which units in the segment are being interviewed for the current interview period; other sample units involved become "Type C Non-interview" (reason: merged).

If the first of the merged units listed is not in the current sample, no interview is taken, and sample units involved become "Type C Non-interview" (reason: merged), See also: Listing, Non-interview Type C

# MILITARY STATUS

Determined for males 18 and over. In Armed Forces includes those serving on active duty at the time of the interview with: U.S. Army, Navy, Air Force, Marine Corps, Coast Guard, reserve branch of any of the above only if currently on active duty status for several months. Also includes commissioned officers of the U.S. Public Health Service who are attached to any branch of the Armed Forces, and National Guardsmen, on active duty. Cadets in U.S. Military academies also are considered to be with the Armed Forces.

# MINOR ASSAULT

As used in the NCS Classification Scheme, a form of assaultive violence in which the attack is carried out without a weapon and results in minor injury, such as bruises, black eye, cuts, and scratches or an undetermined injury requiring less than 2 days of hospitalization. Minor assault may or may not be accompanied by theft. In LEAA published reports, injuries associated with a robbery are classified as resulting from a minor assault if the extent of the injury was minor (e.g., bruises, black eye, etc.) or was undetermined but required less than 2 days of hospitalization.

See also: Serious Assault, Injury, Assaultive Violence, Robber y

# MOTOR VEHICLE THEFT

Stealing or unauthorized taking of a motor vehicle, including attempts at such acts. Motor vehicles include automobiles, trucks, motorcycles, and any other motorized vehicle that is legally allowed on most roads and highways. See also: Motor Vehicles - Total Number of

# MOTOR VEHICLES, TOTAL NUMBER OF

Household respondent is asked how many motor vehicles the household has owned during the six months prior to interview in the Cities Sample. (If none have been owned, screen guestions concerning auto theft are ignored.) A motor vehicle is usually a car, truck, motorcycle, or other vehicle which may be legally driven on public roads. Not included are boats, airplanes, minibikes, or snowmobiles.

# (CONTINUED)

All motor vehicles owned during the reference period are counted, including those sold, given away, junked, stolen, or abandoned. Motor vehicles used SOLELY by a recognizable business are not included, nor are vehicles loaned to the respondent for private use by a business, unless the respondent owns the business. Motor vehicles used by a student, owned by his parents, and kept away from home are not included.

# NCP

See: National Crime Panel (NCP)

### NCS

See: National Crime Survey (NCS)

NCS CLASSIFICATION SCHEME Classifies crimes according to six main types: assaultive violence with theft, assaultive violence without theft, personal theft without assault, burglary, larceny, and motor vehicle theft. Each type comprises several subcategories. Incidents in the NCS tape files have been coded according to the NCS Classification Scheme. See also: Crime Classification

NATIONAL CRIME PANEL (NCP) A program of household and commercial victimization surveys sponsored by the Law Enforcement Assistance Administration and conducted by the Bureau of the Census to develop new information on the matter of crime and its impact on society. There are two program components -- a continuous national survey and surveys taken periodically in selected central cities. The program provides: 1) detailed information about the victims of crime, 2; estimates number and types of crime not reported to the police, and 3) uniform measures of selected types of crime permitting comparisons over time and between different geographic areas. A key feature of the NCP methodology is its use of representative probability sampling to discover incidents of crime, rather than relying on law enforcement agency records. This approach enables the collection of previously unavailable data on the demographic and socioeconomic aspects of crime. See also: National Crime Survey, Commercial Victimization Survey, Law Enforcement Assistance Administration, Census - U.S. Bureau of, National Sample, Cities Sample

NATIONAL CRIME SURVEY (NCS) The household victimization portion of the National Crime Panel program which focuses on measuring the extent of

victimization ascribable to the major crimes of assault, rape, robbery, burglary, larceny, and auto or motor vehicle theft. The National Crime Survey uses two samples (National and Cities) to obtain accurate and up-to-date measures of the amounts and kinds of crimes of which households and persons 12 years of age and older have been victims. See also: National Crime Panel, Crimes, Commercial Victimization Survey, National Sample, Cities Sample

# NATIONAL SAMPLE

One of the two major components in the National Crime Panel program. A total of approximately 72,000 housing units and other living quarters are designated for the sample. Interviewing began in July 1972. The sample is divided into six groups, or rotations, each of which contains housing units whose occupants are interviewed once every six months over a period of 3 years. Each rotation group is further divided into six panels. Therefore, one-sixth of each rotation group, or one panel, is interviewed each month during the six-month period. Because the survey is continuous, additional sample units are selected in the manner described and assigned to rotation groups and panels for subsequent incorporation into the sample. A new rotation group enters the sample every six months, replacing a group phased out after being in the sample for three years.

See also: Sample Rotation, National Sample Design, Cities Sample

# NATIONAL SAMPLE DESIGN

Estimates from the survey are based on data obtained from a stratified multistage cluster sample. In designing the sample, the first stage consisted of the formation of primary sampling units comprising counties or groups of counties, including every county in the Nation. Approximately 1,930 of these units were so formed and grouped into 376 strata. Among these strata, 156 represented single areas and thus came into the sample with certainty. These strata, designated self-representing areas, generally contained the larger metropolitan areas. The remaining 220 strata were formed by combining areas that shared certain characteristics, such as geographic region, population density, population growth rate, proportion of nonwhite population, etc. From each stratum, one area was selected for the sample, the probability of selection having been proportionate to the area's population; areas so chosen are referred to as being non-self-representing. The remaining stages of sampling were designed to insure a self-weighting probability sample of housing units and group

# (CONTINUED)

quarters within each of the selected areas. (Self-weighting means that each sample household had the same initial probability of being selected.) This involved a systematic selection of enumeration districts (geographic areas used for the 1970 Census) with probability of selection being proportionate to their 1970 population size, followed by the selection of clusters of approximately four housing units from within each enumeration district. To account for units built after the 1970 Census, a sample was drawn, by means of an independent clerical operation, of permits issued for new construction. Jurisdictions that do not issue building permits were sampled for new construction by means of a sample of area segments. The resulting sample of new construction units, though yielding a relatively small portion of the total sample, will account for an increasing share as the decade progresses. See also: Enumeration District, National Sample, Primary Sampling Unit (PSU), Segment, Strata

NEIGHBORHOOD CHARACTERISTICS Incuded in the National Complete Sample File and the National Incident Extract File. Neighborhood Characteristics consist of 55 summary indicators from the 1970 Census about populations and their their housing in particular areas. The Neighborhood Characteristics were appended to most household records describing units built before, and counted in, the 1970 Census. In general, Neighborhood Characteristics are ratios recorded in the range .00 to .99; for example, "ratio of persons of Spanish heritage to total population" might be .07 for a selected neighborhood, indicating 7% Spanish population for that area. Specific neighborhoods are not identified by name, but represent areas of varying types, about the size of Census tracts (approximately 4,000 persons).

# NON-INTERVIEW

Instance where an interview cannot be obtained. There are four types: A) when an interview for an eligible household is not obtained for some reason such as refusal; B) when an interview is not obtained because the unit is ineligible for interview at the present time, such as a vacant unit, but could become eligible in the future; C) when the unit is physically ineligible, e.g., demolished; and 2) when a particular member is not interviewed in an otherwise interviewed household. See also: Non-interview Procedures, Non-interview - Type A; - Type B: - Type C: - Type Z

NON-INTERVIEW ADJUSTMENTS Adjustments made to interviewed household and person

5) interview is not conducted due to a serious illness or death in the family 6) the interviewer is unable to locate the sample unit Every effort is made to avoid this type of non-interview in order to keep the unit and maintain a representative sample. See also: Non-interview, Non-interview Procedures, Non-interview Adjustments

NON-INTERVIEW TYPE B Consists of units which are not eligible for interview because: 1) unit is a vacant regular housing unit 2) unit is vacant and used for storage 3) unit is occupied by persons usually residing elsewhere 4) unit unfit for habitation or to be demolished 5) unit under construction and not ready for occupancy 6) unit temporarily converted to business or storage 7) address identifies an unoccupied tent or trailer site 8) permit granted, but construction not started See also: Non-interview, Non-interview Procedures NON-INTERVIEW TYPE C Consists of units not eligible for sample because: 1) no address was listed on the sample line of the listing sheet 2) unit demolished by time of enumeration 3) house or trailer has been moved 4) unit converted to permanent business or storage 5) unit has been merged with another unit See also: Non-interview, Merged Units, Non-interview

Procedures

NON-INTERVIEW TYPE Z A within-household non-interview. It occurs when the interviewer is unable to obtain an interview for a particular household member in an otherwise interviewed household. For this type of non-interview person, only a few personal characteristics items are filled in on the Basic Screen Questionnaire. See also: Non-interview, Non-interview Procedures, Basic Screen Questionnaire, Non-interview Adjustments

NONSAMPLING VARIABILITY See: Survey Error, Sampling Variability

۴

273

OCCUPATION CODE A three-digit numeric code assigned, using the 1970 Alphabetic Index of Industries and Occupations, based on the type of job held by the person. For unemployed persons, the occupation code is based on the last job held within the

(CONTINUED)

weights. A household non-interview adjustment accounts for some occupied units qualified to participate in the survey, but from which an interview was not obtained (Non-interview Type A). A within-household non-interview adjustment accounts for situations in which at least one, but not all, eligible persons in a household were interviewed (Non-interview Type Z). See also: Non-Interview Procedures, Household Weight, Person Weight, Non-Interview Type A, Non-Interview Type Z

# NON-INTERVIEW PROCEDURES

For various reasons, interviewers are unable to obtain interviews for all sample units. Such units are classified as non-interviews and are handled as follows: 1) Type A Non-interview - occupied sample units in which household members were rarely at home, uncooperative, or otherwise impossible to reach. A non-interview adjustment is applied to interviewed household and person weights so that these units are represented in the sample. 2) Type B Non-interview - units selected for sample which turn out to be vacant or otherwise ineligible. Since these units might become eligible in the future, they are revisited in subsequent periods that the unit is in the

sample. If they become eligible, the household is interviewed.

3) Type C Non-interview - units which are demolished, converted to non-residential use or otherwise out of scope for NCS. These units are dropped from the sample once they are identified. The sample size is sufficiently large to allow for Type B and C Non-interviews.

In addition, if at least one, but not all eligible persons in a household are interviewed, persons for which an interview was not obtained (within-household non-interview) are classified as Type Z Non-interviews and only a few personal characteristics (obtained by proxy) are recorded. A non-interview adjustment is applied to interviewed person weights to account for those with-household non-interviews. See also: Non-interview, Non-interview Type A, Non-interview Type B, - Type C, - Type Z,

Non-Interview Adjustment

NON-INTERVIEW TYPE A Consists of households occupied by persons eligible for interview but from whom no interviews are obtained, because: 1) no one is at home in spite of repeated visits 2) the entire household is temporarily away during all of the interview period 3) the household refuses to give any information

4) the unit cannot be reached due to impassable roads

166

last five years. See also: Industry Code, Class of Worker, Major Activity

OCCUPIED HOUSING UNIT

A housing unit is considered occupied if it is the usual place of residence of the person or persons living in it at the time of interview. See also: Place of Residence, Housing Unit

# OFFENDER

The person who committed the crime or was believed to be the person who committed the crime.

# **OPERATION OF BUSINESS**

For the purposes of the National Crime Survey, a distinction is made between two types of businesses. These are catagorized as recognizable businesses and unrecognizable businesses.

A recognizable business is one that is observable and identifiable from the outside by a sign or some other indication. Crimes involving any recognizable business, such as property stolen from the business are not included in the NCS. Only the loss of personal property of the respondent or of another household member, or personal threat or injury to the respondent or other household member is included if a crime involves a recognizable business. An unrecognizable business has no outside indication, such as a sign in the yard or window, which indicates that it is a business. An example of an unrecognizable business is a mail order business run from the home, if there is no sign outside the house advertising the business. Crimes involving unrecognizable businesses, including property stolen from the business, are included in the NCS estimates.

# OTHER UNITS

Refers to living quarters which do not qualify as housing units. OTHER units are located in special places such as institutions, dormitories, and boarding houses where the residents have their own rooms, groups of rooms, or beds; and also have some common facilities such as a dining room, lobby, or living room or recreational areas. Some of the rooms, groups of rooms, etc., in these places are always classified as OTHER units, even though they have direct access or complete kitchen facilities. Other rooms or groups of rooms are classified as OTHER units if they do NOT meet the housing unit definition. All units in the National and Cities Samples are defined as

either being a housing unit or an OTHER unit. See also: Housing Unit, Living Quarters, Special Places,

(Type of) Living Quarters, Group Quarters,

# (CONTINUED)

# Extra Units

OUT OF UNIVERSE Out of Universe (or INAP) is used in the codebook documentation to designate those areas for which the particular question was not appropriate and therefore not asked. For example, employment-related guestions were not asked of persons under the age of 16. See also: Residue

# PANEL

Used in the National Sample rotation scheme. Each panel is a systematic one-sixth sample of the 72,000 sample units, which is interviewed semi-annually during two designated months, e.g., January and July or February and August. See also: Sample Rotation, Panel Number

# PANEL NUMBER

In the National Sample, an identification number (1-6) assigned to each case in the sample which identifies the months in which the unit is to be interviewed (e.g., Panel 1 housing units are interviewed in January and July). It is the first digit of the segment number. See also: Panel, Segment Number

# PERSON WEIGHT

ratio estimates. See also: Weight, Household Weight, Incident Weight,

# PERSONAL CRIMES See: Personal Incident, Personal Victimization

PERSONAL CRIMES OF THEFT Used in the NCP published reports to describe the theft of property or cash, either with contact (but without force or threat of force) or without direct contact between victim and offender. Includes both completed and attempted acts. Also referred to as personal larceny. The NCP Classification Scheme does not distinguish between personal crimes of theft which do not involve force or the threat of force and robbery which does. See also: Larceny, Robbery, Personal Theft Without Assault (Robbery)

PERSONAL INCIDENT

In both the National and Cities Samples, the person weight is based on the basic weight of the person in the sample plus adjustments for within-household noninterviews, subsampling, noninterviewed households, and various

Non-interview Adjustments

A specific criminal act involving one or more persons as victims of one or more offenders. In LEAA published reports, crimes against persons include rape, robbery, assault, and personal larceny. Estimates of the number of personal incidents are usually lower than estimates of personal victimizations because the number of persons victimized during an incident are not accounted for separately. Also, in situations where a personal crime occurred during the course of a commerial crime, it was assumed that the incident was represented in the Commercial Victimization Survey and, therefore, it was not counted as an incident of personal crime.

See also: Personal Victimization, Victimization, Incident Weicht

# PERSONAL INTERVIEWS

Each enumeration period, initial interviews in a household are conducted in person. Follow-up interviews to reach persons not available at the time of the initial visit may be made by telephone.

See also: Telephone Interviews, Enumeration Period

PERSONAL LARCENY See: Larceny

# PERSONAL THEFT WITHOUT ASSAULT

As used in the NCS Classification Scheme, refers to all of the following crimes against persons: robbery (with or without a weapon), attempted robbery (with or without a weapon), purse snatch (without force), attempted purse snatch (without force), pocketpicking. This term is not used in the LEAA published reports. See also: Crimes, Robbery, Larceny

# PERSONAL VICTIMIZATION

A specific criminal act as it affects one victimized person. In LEAA published reports, crimes against persons include rape, robbery, assault, and personal larceny. Estimates of the number of personal victimizations are determined by the number of victims of such acts: ordinarily, the number of victimizations is somewhat higher than the number of incidents because more than one person was victimized during certain incidents, and because details of personal crimes occurring during the course of a commercial crime, as related to the victimized person, are reflected in these estimates.

See also: Personal Incident, Victimization, Incident

# PLACE The term place refers to a concentration of population,

# (CONTINUED)

regardless of the existence of legally prescribed units, powers, or functions. However, most of the places identified are identified. Places are identified in the National Rural, Urban Netropolitan Statistical Area

in the census are incorporated as cities, towns, villages, or boroughs. In addition, the larger unincorporated places Sample files by a two-digit place size code and a one-digit See also: Place Size Code, Place Description Code, PLACE DESCRIPTION CODE A one-digit code used in the National Sample files to identify the type of place in which a sample unit is located. The following categories are given: 1) Central city of an SMSA only 2) Central city of an urbanized area only 3) Central city of both an SMSA and an urbanized area

4) Other incorporated place 5) Unincorporated place Code 6 not used 7) Not a place See also: Central City, Urbanized Area, Place, Standard PLACE OF OCCURRENCE

Identifies whether the incident occurred within the limits of the city in which the repondent lives or somewhere else See also: Place of Occurrence (Detailed) PLACE OF OCCURRENCE (DETAILED) The following place of occurrence categories are used to describe where the incident occurred: 1) At or in own home or apartment, in garage or other entry, and attacks or threats taking place inside the

building on property -- always includes actual or attempted respondent's dwelling. Other buildings on property include tool sheds, servants' quarters, greenhouses, barns, stables, 2) At or in vacation home, hotel, or motel. 3) Inside a commercial building, such as a store, resturant, bank, gas station, public conveyance or station -- includes all commercial buildings, commercial parking lots, public buses, trains, airplanes, taxis, trolleys, etc., and terminals or stations for such conveyances. 4) Inside office, factory, or warehouse. 5) Near own home: yard, sidewalk, drive, carport, apartment hall -- does not include actual or attempted burglaries: does include actual or attempted auto theft or theft from car, when car was parked on the street in front of the

respondent's home. 6) On street, in park, field, playground, school grounds, public parking lot. 7) Inside school building. 8) Other See also: Place of Occurrence

PLACE OF RESIDENCE

Specific living guarters held by respondent, to which he is free to return at any time, AND at which he usually lives and sleeps. Not necessarily the same as legal residence or voting residence. Also described as "Usual Place of Residence."

See also: Living Quarters, Occupied Housing Unit, Vacant Housing Unit

# PLACE SIZE CODE

A two-digit code used in the National Sample files to identify the population size range for the place in which the sample unit is located; as determined by the 1970 Census. Place sizes are classified in the following categories: Under 200 200 to 499 500 to 999 1000 to 1.499 1,500 to 1,999 2,000 to 2,499 2,500 to 4,999 5,000 to 9,999 10,000 to 19,999 20,000 to 24,999 25,000 to 49,999 50,000 to 99,999 100,000 to 249,999 250,000 to 499,999 500,000 to 999,999 1,000,000 or more

POCKETPICKING See: Personal Theft Without Assault, Larceny

# POLICE INFORMED

See also: Place

A question on the Crime Incident Report asks: "Were the police informed of this incident in any way?" The "police" include all regular police and sheriff's departments at the city, county, state, or federal level of government. Also included are specialized police forces authorized to make arrests in a special area or jurisdiction, e.g., campus

# (CONTINUED)

police, park police, transit police, harbor police, and airport police. Excluded are security guards, fish & game wardens, and such officers without authority to make police arrests.

PRESENCE OF WEAPON See: Weapon

PRIMARY INCIVIDUAL

Household head living alone or with non-relatives only. PRIMARY SAMPLING UNIT (PSU) Consists of a county or a number of contiguous counties. Each SMSA constitutes a separate PSU. In combining counties to form PSU's, each PSU is defined so as to be as heterogeneous as possible. 1,921 PSU's were formed, using every county in the U.S. In the National Sample design, 376 PSU's were selected to form the first stage of sampling. In the Cities Sample, the PSU numbers identify the general area in which a segment is located. See also: National Sample Design, Control Number,

Enumeration District, Standard Metropolitan Statistical Area (SMSA)

# PRINCIPAL PERSON

The wife in a husband-wife household or head of household in a nonhusband-wife household; often the household respondent. Used in the National Sample in determining weights for tabulating household crimes. See also: Head of Household, Household Respondent

# PSU NUMBERS

•

"PSU numbers" are three-digit codes which identify each PSU, and are part of the Control Number which uniquely identifies each sample unit.

# PROXY RESPONDENT

Person answering questions for another person. Information about each household member aged 12 and 13 is obtained by asking the questions for these persons of the household respondent or some other knowledgeable household member. If a particular household member 14 or older is physically or mentally unable to answer the individual questions, or is temporarily absent and is not expected to return before the enumeration closeout date, the interviewer is instructed to accept information from another knowledgeable household

See also: Self Respondent

PURSE SNATCH See: Personal Theft Without Assault, Larceny

OUESTIONNAIRE FORMS There are three basic forms used to collect the data required for the National Crime Survey. Both the National and Cities Samples use the following three forms: 1) Control Card, 2) Basic Screen Questionnaire, and 3) Crime Incident Report. See also: Basic Screen Questionnaire, Control Card, Crime

### RACE

In the National Crime Surveys, persons are classified as either White, Negro or Other. Persons of Latin-American descent are recorded as white, unless they specify themselves as Negro or Other. Other is used for persons of races other than White or Negro, such as Japanese, Chinese, American Indian, etc. For persons of racially mixed parentage, race recorded is that of the person's father. Race is determined by observation for family members and by inquiry for persons unrelated to household head. See also: Ethnicity

Incident Report, Interview Procedures

### RAPE

One of the six major types of crime covered by the National Crime Survey. In LEAA publications, rape is defined as carnal knowledge through the use of force or the threat of force, including attempts. Statutory rape (without force) is excluded. The following rape sub-categories are used in the NCS Classification Scheme: rape with theft, attempted rape with theft, rape without theft, attempted rape without theft.

See also: Crimes, Assaultive Violence

### RATE

A fixed ratio of two quantities. Rate per 100 households refers to the amount of victimization for every 100 households. Rate per 100 population refers to the amount of victimizations for every 100 persons. See also: Victimization, Survey Error, Weight

### RECODE

A single code, mechanically derived by combining codes for several related items, used for convenience and efficiency in tabulating data.

RECOGNIZABLE BUSINESS See: Operation of Business

# (CONTINUED)

# RECORD COUNTS

Provides a count of records on a file-specific basis, e.g., the number of household records, person records, and incident records contained in a file. May also be used to provide subcounts within a record type, e.g., number of interviewed households, number of non-interviewed households, etc. Record counts are provided in the User Directories for each NCS tape file. See also: User Directories

# REFERENCE PERIOD

The length of time for which respondents are asked to report on victimizations experienced. A reference period of 6 months is used in the National Sample. See also: Collection Quarter, Data Quarter, Telescoping, Bounding Procedure

# REINTERVIEW

One of several methods used to evaluate and improve the quality of interviewing. Reinterviews evaluate the impact of errors of variations in response, measure how well individual interviewers follow procedures, and measure errors in coverage arising from incorrect listing, failure to conduct interviews at the correct address, non-interview misclassifications, missed units, or incorrect applications of definitions of housing unit and household members. Reinterviews are conducted regularly in a small proportion of the National Sample Households.

RELATIONSHIP TO HOUSEHOLD HEAD Interviewers determine the precise relationship to the household head of each person living in the household, e.g., wife, son, daughter, step-son, step-daughter, father, mother, grandson, daughter-in-law, aunt, nephew, lodger, servant, hired hand, visitor, and so on. In classifying these entries for the tape files, only five categories are used:

Head Wife of Head Own Child Other relative Non-relative See also: Head of Household, Primary Individual

RESIDENCE See: Place of Residence

RESIDUE

ŕ

Used in the codebook documentation to designate those cases where the respondent could not or did not provide an answer,

or for some reason the response given did not fall into the predetermined categories. Attempts were made during the edits to convert such cases to valid codes based on the presence or absence of certain key elements. See also: Out of Universe

# RESPONDENT See: Household Respondent, Proxy Respondent, Self Respondent

### ROBBERY

In the NCS Classification Scheme, robbery is a subcategory of personal theft without assault and includes: robbery with weapon, robbery with no weapon, attempted robbery with weapon, and attempted robbery with no weapon. As used in the LEAA published reports, robbery is defined as theft or attempted theft, directly from a person, of property or cash by force or threat of force, with or without a weapon.

There are two main subcategories of robbery, viz., robbery with injury and robbery without injury. Robbery with injury is theft or attempted theft from a person, accompanied by an attack, either with or without a weapon, resulting in injury. An injury is classified as resulting from a serious assault if a weapon was used in the commission of the crime or, if not, when the extent of the injury was either serious (e.g., broken bones, internal injuries, etc.) or undetermined but required 2 or more days of hospitalization. An injury is classified as resulting from a minor assault when the extent of the injury was minor (e.g., bruises, black eyes, etc.) or undetermined but required less than 2 days of hospitalization. Robbery without injury is theft or attempted theft from a person, accompanied by force or threat of force, either with or without a weapon, but not resulting in injury.

See also: Personal Theft Without Assault

# ROTATION

See: Sample Rotation, National Sample, Rotation Group Number

# ROTATION DESIGN

See: Sample Rotation, National Sample, Rotation Group Number

# ROTATION GROUP See: Sample Rotation

ROTATION GROUP NUMBER Used in the National Sample rotation scheme. Each rotation

# (CONTINUED)

group should be a systematic one-sixth sample of the 72,000 housing units as well as a one-sixth sample of the sample interviewed each month. The rotation group number is denoted by the hundreds digit of the four-digit segment number assigned to each sample unit. See also: Segment Number, Sample Rotation, National Sample

# RURAL

All remaining areas not falling into one of the following categories:

- unincorporated, or urban areas

See also: Urban, Place, Land Use

# SMSA

. *

See: Standard Metropolitian Statistical Area (SMSA)

# SAMPLE

A selection of part of the units of a population according to specific and detailed procedures. The properties of a sample population are studied to gain information about the whole population. For the NCS surveys, a probability sample was used, whereby each element of the population has a known, but not necessarily equal chance of being included in the sample. See also: National Sample, Sampling Variability, Estimate, Population, Cities Sample

# SAMPLE DESIGN

SAMPLE DESIGNATION A portion of the identification codes assigned to each sample unit in the National Sample, consisting of the letter "J" and two digits. The letter distinguished NCS surveys from other Census surveys, and the digits identify the sequence and source of selection of sample addresses. For example, the first sample selected was designated as J01. See also: Identification Code, Control Number

# SAMPLE ERROR See: Sampling Variability

SAMPLE ROTATION A rotation scheme is used for the National Sample: each sample of approximately 72,000 households is divided into

1) Places of 2,500 or more inhabitants incorporated into cities, boroughs, villages, and towns (except towns in New England, New York, Wisconsin) 2) The densely settled urban fringe whether incorporated or 3) Unincorporated places of 2,500 or more inhabitants

See also: National Sample Design, Cities Sample Design

six rotation groups. When the rotation plan became fully operative in January, 1977, households in a particular rotation group and sample was be interviewed once every six months for 3 years, the first interview being only for the purpose of bounding. Each rotation group is further divided into six panels or months. Thus 1/6th of each rotation group is interviewed each month during a six-month period. One rotation group enters the sample every six months, while the corresponding rotation group from a previous sample is phased out. This enables preservation of the overall sample size and survey procedures, while averting undue imposition to, and biases in reporting by, respondents through repeated interviews.

See also: Bounding Schedule, National Sample, Panel, Rotation Group Number

# SAMPLE UNIT

A unit selected for inclusion in a sample or a census. See also: Sample, Housing Unit, Other Unit, Special Places

## SAMPLING VARIABILITY

Chance differences in representation which occur because a sample was surveyed instead of the whole population. The primary measure of sampling variability is Standard Error. See also: Sample, Standard Error, Confidence Interval, Survey Error, Variance

# SCREEN OUESTION NUMBER

On each Crime Incident Report, the number of the screen question that elicited the report of the incident is recorded. See also: Individual Screen Questions, Household Screen

Ouestions

# SCREEN QUESTIONNAIRE See: Basic Screen Questionnaire

### SEGMENT

A cluster of sample units in the same PSU selected for household interview. In the National Sample, sample units are located in one of five types of segments, depending on the type of Enumeration District in which the segment is located:

1) Address Segments - consist of specific addresses selected from the 1970 Decenial Census lists, in address type Enumeration districts.

2) Area Segments - consist of relatively small designated areas of land with well-defined boundaries, such as streets, roads, rivers, or railroad tracks in area type Enumeration

# (CONTINUED)

districts. The interviewer lists all of the living quarters in a designated segment, and a sample of these is selected for interview. 3) Permit Segments - consist of addresses selected from a sample of building permits issued for new construction. 4) Special Place Segments - consist of special places in address type Enumeration districts which can be identified from Census listings. 5) Cen-Sup Segments - consist of addresses which were inadequately identified or unreported in the Census. In the Cities Sample, sample units are located in either unit (address), Permit, or Special Place Segments. No Area or Cen-Sup Segments are used. Address segments are referred to as Unit Segments in the Cities Sample. See also: National Sample Design, Enumeration District, Extra Units, Listing, Segment Number, Serial Number, Updating

SEGMENT NUMBER Part of the Control Number assigned to each sample unit. In the National Sample, it consists of four digits: the thousands digit identifies the panel; the hundreds digit identifies the rotation group; tens and units together identify clusters which are numbered sequentially starting with "01" in each panel and rotation combination. See also: Segment, Control Number, Panel Number, Rotation Group Number, Enumeration District

SELF-EMPLOYED See: Class of Worker

r.

SELF RESPONDENT Person who answers questions for himself. Information about each household member 14 years and over is obtained by self-response; that is, each of these persons is interviewed for himself. See also: Proxy Respondent

SELF-WEIGHTING Indication that all sample units have the same initial probability of selection for the Sample. See also: Weight, Sample

SERIAL NUMBER A unique two-digit number assigned in sequence within each segment to each sample household in the National Sample. In the Cities Sample, it is a unique 6 digit number assigned to each sample unit within a particular PSU. It is used for administrative control, and is part of the Control Number.

See also: Segment, Control Number

# SERIES INCIDENT REPORT

Under certain circumstances, the interviewer is allowed to report several incidents as a "series" incident on one Incident Report form. All of the following conditions must exist:

1) The incidents had to be very similar in detail. 2) There must have been at least three incidents in the "series."

3) The respondent must not have been able to recall dates and other details of the individual incidents well enough to report them separately.

In completing the Crime Incident Report for a series incident, details of the most recent incident are used. For LEAA publications, series incidents are tabulated separately and are not included with single incidents when estimating the amount of crime.

# SERIOUS ASSAULT

As used in the NCS Classification Scheme, a form of assaultive violence in which the attack is either carried out with a weapon, or results in serius injury, such as broken bones, internal injuries, loss of consciouness, or, an undetermined injury requiring 2 or more days of hospitalization. Serious assault may or may not be accompanied by theft.

In LEAA published reports, injuries associated with a robbery are classified as resulting from a serious assault if a weapon was used in the commission of the crime, or, if not, when the extent of the injury was either serious (e.g., broken bones, internal injuries, etc.) or was undetermined but required 2 or more days of hospitalization. See also: Injury, Minor Assault, Assaultive Violence,

Robber y

# SIMPLE ASSAULT

As used in the LEAA published reports, an attack without a weapon resulting either in minor injury -- e.g., bruises, black eyes, cuts, scratches, swelling -- or in undetermined injury requiring less than 2 days of hospitalization. Also includes attempted assault without a weapon. It does not include attacks accompanied by theft. See also: Assault, Aggravated Assault

SPECIAL PLACE SEGMENT See: Sequent

SPECIAL PLACES Places in which the occupants have special living

# (CONTINUED)

OTHER units and a housing unit. Living guarters within special places are designated as interviewed. See also: Living Quarters, Group Quarters, Other Units,

# STANDARD ERROR

r

A statistician's measure of sampling variation taken generally to state the amount of deviation of an estimate because a sample was drawn instead of a census taken. The particular sample used in a survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. The difference between a sample estimate and the average of all possible samples is called the sampling deviation. The standard error of a sample estimate is a measure of the variation among the estimates from all possible samples, and thus is a measure of the precision with which an estimate from a particular sample approximates the average result of all possible samples. An estimate of the standard error of a sample estimate can be computed from the data obtained in the sample.

178

arrangments. Special places include: correctional institutions; homes for the aged, infirm, or needy; mental institutions; Nursing, convalescent, or rest homes; specialized hospitals; Armed Forces installations; boarding and rooming houses; communes; convents and monastaries; dormitories and other residences at schools; flophouses and missions; halfway houses; hotels and motels; Nurse's homes; private residential clubs and tourist camps; recreational, educational, religious camps; tourist camps; tent and trailer camps; vacation cabins; YMCA's, YWCA's; and so on. Special places may include housing units and OTHER units. For example, a dormitory consisting of rooms for students and an apartment for a resident manager would include both

either Staff Units, Non-staff Units, or Unclassified Units, as determined by occupancy or intended occupancy. Non-staff Units are located in certain special places and are defined as (1) the persons for whom the special place is being operated, or (2) the units in which these persons live, such as rooms or suites of rooms. Non-staff units are never interviewed for the NCS. Staff Units are located in the same types of places which contain Non-staff Units and are defined as the houses, apartments, rooms, or suites of rooms occupied or intended for occupancy by resident employees and their families, if any. Unclassified Units are located in certain special places and are the houses, apartments, rooms, etc. occupied or intended to be occupied by all persons. Staff Units and Unclassified Units are

Extra Units, (Type of) Living Quarters

# See also: Variance, Confidence Interval, Survey Error, Sampling Variability, Bias, Estimate

STANDARD METROPOLITAN STATISTICAL AREA (SMSA) A county or group of counties containing at least one city or combined cities, of 50,000 or more inhabitants and adjacent counties which are metropolitan in character, and economically and socially integrated with the central city. The SMSA is named after the central city (or cities) contained in it. A four-digit code identifies each SMSA. Boundaries are drawn by the U.S. Office of Management and Budget.

See also: Central City, Census Tract, Primary Sampling Unit, Urbanized Area, Place Description Code

# STATE CODES (1960)

In the Cities Sample, individual two-digit codes used to designate state in which the sample unit is located. The first digit identifies a region of the country, e.g., New England states are coded 11-16: Midwest states are coded 41-47, stc. State codes are not available in the National Sample because of confidentiality restrictions.

# STRATA

Sub-groups of households within a sample which have specified characteristics in common, such as education, income, or race. The process of making these groupings -- called stratification -- was the second stage of the sampling process in the National Sample. Stratification consisted of combining PSU's with similar population densities, growth rates, proportion non-white, etc.

See also: National Sample Design, Cities Sample Design

# SURVEY ERROR

The primary measure of total error in survey estimates due to:

1) Sampling Bias (systematic error due to use of inadequate or duplicative frames, etc.)

2) Sampling Variability (chance variation that occurs because a sample was surveyed instead of the total population)

3) Non-Sampling Bias (systematic error due to nonresponse, memory error, misinterpretation of questions or procedures, etc.)

4) Non-Sampling Variability (chance variation due to interviewer error, response error, coding and editing errors, etc.)

See also: Bias, Sampling Variability

# (CONTINUED)

TELEPHONE INTERVIEWS The telephone may be used to conduct interviews with household members not available for interview at the time of the initial personal interview at the household. Although initial contact with the household must be a personal visit, subsequent interviews may be made by telephone when another personal visit would be inefficient or costly. See also: Personal Interviews

TEMPORARILY ABSENT OR ON LAYOFF FROM JOB See: Major Activity

# TENURE

Manner in which living guarters are held: 1) Owned or being bought - if owner or co-owner is a household member of the unit, even if the unit is mortgaged or not fully paid for. Owner need not be head of household. A cooperative apartment or condominium unit is owned or being bought only if the owner lives in it. 2) Rented for cash - if any money rent is paid or contracted for by any persons. 3) Without cash rent - includes units not owned, being bought, or rented for cash; usually provided in exchange for services or as a gift. See also: Living Quarters

# THEFT

۳.

See: Personal Theft Without Assault, Burglary, Larceny, Motor Vehicle Theft, Robbery

# THREATENED

A situation in which no physical contact was involved, but the victim nonetheless felt that physical harm could have occurred, e.g., victim was shot at, but not hit. See also: Attacked

TIME LOST FROM WORK Number of cumulative days all affected household members were absent from work due to a crime. It can be time lost because injuries sustained in the incident kept the victim from returning to work immediately, or time taken off work by a household member to do things related to the incident such as visiting a doctor, reporting the incident to the police, seeing an insurance agent, or testifying in court.

TRANSIENT/NONTRANSIENT A transient place is a special place in which more than 25 percent of the rooms, suites, or cabins are occupied or intended for occupancy by transient guests. Transient guests usually stay less than a month and pay at daily

rates. A nontransient place is one in which 75 percent or more of the rooms, suites, or cabins are occupied or indented for occupancy by nontransient (permanent) guests or resident employees. Permanent guests usually stay a month or more at reduced monthly rates. See also: (Type of) Living Quarters

# UA

See: Urbanized Area (UA)

# UAC

See: Universal Area Code

UNCLASSIFIED UNITS See: Special Places

# UNEMPLOYED

In the NCS, civilians, age 16 and older who were not "at work" during the reference week, were available for work, and 1) had been "looking for work" within the past four weeks, 2) were waiting to be called back to a job from which they had been laid-off, or 3) were waiting to report to a new job within 30 days. See also: Major Activity

UNIT SEGMENT See: Segment

# UNIVERSAL AREA CODE (UAC)

The UAC is the 1960 Census State code plus a three-digit code to indicate cities of 50,000 plus population, or the county. It is assigned to the April 1, 1970 residence of all household members who had moved since that time, and to the geographic area in which any incidents of crime occurred. Due to confidentiality restrictions, UAC's are not available in the National Sample files. They are available in the Cities Sample files. See also: State Codes (1960), Confidentiality

# UNLAWFUL ENTRY (WITHOUT FORCE)

A form of burglary in which the offender has no legal right to be on the premises, even though no force was used to gain entrance. The same definitions used in the LEAA published reports and the NCS Classification Scheme.

See also: Burglary, Foricble Entry, Attempted Forcible Entry

UNRECOGNIZABLE BUSINESS See: Operation of Business

# (CONTINUED)

# UPDATING

Addition to, and correction of, original listing sheets which insures that every unit in the segment has a chance to be selected for interview. Remodeled, no-longer-existing, replacement, demolished, converted-to-commercial, merged, newly-constructed, and converted-to-residential structures or units moved into are accounted for in updating procedures. Permit segments are not updated. See also: Listing, Segment

# URBAN

1970 Census designation for persons living in places of 2,509 or more inhabitants incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); the densely settled urban fringe, whether incorporated or unincorporated, or urbanizd areas; and unincorporated places of 2,500 or more inhabitants. See also: Rural, Place, Land Use

URBANIZED AREA (UA) A broad geographical location containing a central city (or twin cities) of 50,000 or more inhabitants and the surrounding closely settled incorporated and unincorporated areas. It differs from an SMSA chiefly in excluding the rural portions of counties in an SMSA and those places separated from the densely populated fringe by rural territory. The boundaries are not considered permanent. See also: Central City, Standard Metropolitan Statistical Area, Place Description Code

VACANT HOUSING UNIT reside elsewhere. See also: Housing Unit, Place of Residence

VALUE OF PROPERTY TAKEN checks, cashier's checks, etc.

# VARIANCE

A major statistic equal to the standard error squared. See also: Standard Error, Sampling Variability, Estimate

VICTIM

182

A housing unit where no persons are residing during the interview period, or any persons found living there usually

Excludes stolen cash and does not include property stolen from non-household members or recognizable businesses, nor does it include stolen checks, credit cards, travelers

In the NCS, the person or household involved in a criminal act during the specified reference period, for whom an

Incident Report was completed. See also: Victimization

# VICTIM-OFFENDER RELATIONSHIP

The respondent is asked to specify one of five categories, indicating how well the victim knew the offender in a crime incident in which the victim was present: 1) Stranger - someone the victim had never seen before 2) By sight only - someone the victim had seen before, but had not said more than "hello" to 3) Casual acquaintance - someone the victim knew well enough to say more than "hello" to 4) Well-known - someone the victim had considered as such. Victim's judgment alone distinguishes between "casual acquaintances" and "well known" 5) Relative - by type of relationship, e.g., spouse, sister, In crime incidents involving multiple offenders, respondent may specify whether the offenders were: 1) All strangers to the victim 2) All relatives - by type of relationship 3) Some relatives - by type of relationship 4) All known 5) Some known In further questioning, the respondent may specify the extent to which the victim knew the offenders - by sight only, casually, or well.

# VICTIMIZATION

A specific criminal act as it affects a single victim. In Criminal acts against persons, the number of victimizations is determined by the number of victims of such acts. Each criminal act against a household is assumed to involve a single victim, the affected household.

See also: Crimes, Incident, Victim, Victimization Rate, Household Victimization, Personal Victimization

# VICTIMIZATION RATE

A measure of occurrence among population groups at risk, e.g., the number of criminal victimizations during the reference period per 100,000 (or other number) persons or households. As used in LEAA publications: 1) For crimes against persons, the victimization rate is computed on the basis of the number of victimizations per 1,000 resident population age 12 and over. 2) For crimes against households, victimizations rates are calculated on the basis of the number of incidents per 1,000 See also: Weight, Standard Error, Victimization

# (CONTINUED)

# WEAPON

Almost any object or substance used to injure or attempt to injure the victim. Not considered as weapons for the purposes of the NCS are: mace, tear gas, items of food, small empty cans, animals, parts of the body such as "hands" or "feet." Also excluded are BB and tear gas guns, except when used as clubs. Weapons other than guns or knives, e.g., rocks, clubs, showels, etc. are not individually identifiable in the data files.

# WEIGHT

A designation of the proportion of a sample to its whole population. When a sample is surveyed, each incident or victimization represents a probable percentage of all cases if the total population were to be surveyed. Accordingly, each case is assigned a numerical coefficient, or weight, expressing its relative importance in a frequency distribution equalling that of the sample to the whole. Thus, multiplying each case by its assigned weight provides an estimate of the entire population. Because there are different proportions in the samples of households, persons and incidents with respect to all possible households, persons, and incidents in the surveys, there are different weights for each. See also: Household Weight, Incident Weight, Person Weight, Estimate, Self-Weighting

# WORKING

Working for pay or profit; working without pay on family farm or business; or working on jury duty, if paid for it. See also: Major Activity
