## Fiscal Year 2010 Report on the Paul Coverdell Forensic Science Improvement Grants Program

## Fiscal Year 2010 Report on the Paul Coverdell Forensic Science Improvement Grants Program

The Paul Coverdell National Forensic Science Improvement Grants Program, managed by the Office of Justice Programs' National Institute of Justice (NIJ), provides funding to States and to units of local government to improve the quality and timeliness of forensic science and medical examiner services, in accordance with the Coverdell Act. For the purposes of the Act, the District of Columbia and the five U.S. territories are considered States. NIJ executes the Coverdell Grants Program through a grant solicitation that has both a formula and a competitive component. Only States are eligible to apply for the formula component.

The Coverdell Act requires that 75 percent of the total program funds be awarded to States through State Administering Agencies (SAAs). These "base" awards are made to all eligible SAAs who apply based on the population of the individual States. The Coverdell Act requires that the remaining 25 percent of program funds be awarded competitively. These "competitive" funds may be awarded to SAAs or dispersed directly to units of local government based on the merits of the respective applications. Both states and local governments that provide forensic science or medical examiner services may apply for the competitive component.

Applications for competitive funding are reviewed by an independent panel made up of subject matter experts from the forensic science community. The panelists review and rate the applications individually based on how well each meets the specific evaluation criteria cited in the solicitation.

On April 1, 2010, NIJ released the solicitation seeking applications for funding under the Fiscal Year (FY) 2010 Paul Coverdell Forensic Science Improvement Grants Program. NIJ received 222 applications; 25 States applied for base funding, while 28 States applied for a combination of base and competitive funding. The remaining 169 applications were received from units of local government for competitive funding. Sixteen applications were denied due to various circumstances such as duplicate applications, state entities not being eligible, and applications being non-responsive to solicitation criteria.

NIJ made a total of 104 awards valued at \$33,285,684; 44 States received base awards, 9 States received combination base and competitive awards, and 51 units of local government received competitive awards.

NIJ has successfully administered the Coverdell Program since 2002. NIJ monitors each award to ensure compliance with federal statutes, regulations, and policies designed to provide assurance that federal funds are used appropriately. Coverdell applicants' budgets are reviewed to ensure they are in accord with the work promised in the grant application and consistent with Coverdell Program statutory and policy requirements. Grantees are monitored through the Grants Progress Assessment (GPA) Program to review laboratory practices and grant compliance. In FY 2010, NIJ awarded \$800,000 to the National Forensic Science Technology Center to support the GPA program.

NIJ is pleased to report that as a result of the funding provided by Congress in FY 2010, NIJ increased the Coverdell Program minimum base award to States and territories from \$140,397 in FY 2009 to \$199,728 in FY 2010 and increased the maximum competitive award to \$175,000 versus \$125,000 in FY 2009. Since its inception, the Coverdell Program has awarded 750 grants to States and units of local government to improve the quality and timeliness of forensic science services.

NIJ is grateful for the opportunity to help the criminal justice community by improving the quality and timeliness of forensic science and medical examiner services. We look forward to continuing these efforts through important programs such as the Paul Coverdell Forensic Science Improvement Grants Program.
