Drug Courts

Background

Drug courts are specialized court docket programs that target criminal defendants and offenders, juvenile offenders, and parents with pending child welfare cases who have alcohol and other drug dependency problems. Although drug courts vary in target population and resources, programs are generally managed by a multidisciplinary team including judges, prosecutors, defense attorneys, community corrections, social workers and treatment service professionals. Support from stakeholders representing law enforcement, the family and the community is encouraged through participation in hearings, programming and events like graduation.

Adult drug courts employ a program designed to reduce drug use relapse and criminal recidivism among defendants and offenders through risk and needs assessment, judicial interaction, monitoring and supervision, graduated sanctions and incentives, treatment and various rehabilitation services.

Juvenile drug courts apply a similar program model that is tailored to the needs of juvenile offenders. These programs provide youth and their families with counseling, education and other services to: promote immediate intervention, treatment and structure; improve level of functioning; address problems that may contribute to drug use; build skills that increase their ability to lead drug- and crime-free lives; strengthen the family’s capacity to offer structure and guidance; and promote accountability for all involved.

Family drug courts emphasize treatment for parents with substance use disorders to aid in the reunification and stabilization of families affected by parental drug use. These programs apply the adult drug court model to cases entering the child welfare system that include allegations of child abuse or neglect in which substance abuse is identified as a contributing factor. Program goals include: helping the parent to become emotionally, financially and personally self-sufficient; promoting the development of parenting and coping skills adequate for serving as an effective parent on a day-to-day basis; and providing services to their children.

Other types of drug courts have emerged to address issues specific to unique populations including tribal, driving while intoxicated (DWI), campus, reentry, veterans and mental health courts.

NUMBER AND TYPES OF DRUG COURTS

There are more than 2,600 drug courts across the United States, of which half are adult treatment drug courts. Adult drug courts are guided by 10 key components (see Defining Drug Courts: The Key Components1) and BJA’s Seven Program Design Features.2

Growing in number are family (329), driving while intoxicated or DWI (192), and other drug courts serving specific needs. Juvenile drug courts have decreased (458). Juvenile drug courts are guided by 16 strategies; see Juvenile Drug Courts: Strategies in Practice.3

Family drug courts are guided by 10 Key Principles for Permanency Planning for Children.4

RESEARCH FINDINGS

NIJ’s Multisite Adult Drug Court Evaluation5 found:

- Participants reported less criminal activity (40% vs. 53%) and had fewer rearrests (52% vs. 62%) than comparable offenders.
- Participants reported less drug use (56% vs. 76%) and were less likely to test positive (29% vs. 46%) than comparable offenders.
- Treatment investment costs were higher for participants, but with less recidivism, drug courts saved an average of $5,680 to $6,208 per offender overall.

Program Development, Research and Dissemination

Through financial grants and other assistance, the Bureau of Justice Assistance (BJA) supports building drug court capacity to increase participation among appropriate adult target populations and to maximize criminal justice and treatment resources, such as in partnership with the Substance Abuse and Mental Health Services Administration (SAMHSA) and the Department of Veterans Affairs. BJA provides training and technical assistance through the National Drug Court Resource Center, which supports several drug court services. The Adult Drug Court Technical Assistance Project at American University, and the Statewide Adult Drug Court Training and Technical Assistance Program at the Center for Court Innovation, deliver onsite and other operations development and implementation services. The Tribal Law and Policy Institute serves tribal healing to wellness (drug) courts with a Tribal Drug Court Training and Technical Assistance Program. The National Drug Court Institute (NDCI) reports information updates on drug court activities and delivers an extensive curriculum to drug court professionals through national conferences, regional planning and other training meetings.

The Office of Juvenile Justice and Delinquency Prevention (OJJDP) supports juvenile and family drug court programs through financial grants and other assistance, including assessment tool development. In 2007, OJJDP partnered with SAMHSA and the Robert Wood Johnson Foundation to better serve substance-abusing delinquents by developing juvenile drug courts that apply the Reclaiming Futures program model. OJJDP provided funds for an evaluation by the University of Arizona of six Juvenile Drug Court/Reclaiming Futures Program sites. OJJDP started a Juvenile Drug Courts Mentoring and Support Services Initiative in 2010, and provides training and technical assistance through the National Council of Juvenile and Family Court Judges and NDCI to juvenile programs, and through the Center for Children and Family Futures to family programs. OJJDP's Evaluation of Juvenile Drug Court Programs is a study of nine programs to assess their effectiveness in reducing recidivism and improving youths' social conditions, and to identify the characteristics of youth and programs most associated with successful outcomes.

The National Institute of Justice (NIJ) funds research on drug court processes, impact and cost efficiency. One evaluation tracked 10 years of cohorts in the Multnomah County Drug Court and found rearrests were lower 5 years or more later for participants than for comparable drug offenders; however, reductions ranged from 17 percent to 26 percent over cohorts with changes in programming and judge assignments. NIJ’s Multisite Adult Drug Court Evaluation found that programs significantly reduce drug use and criminal offending — both during and after program participation. Compared to traditional case processing and supervision, drug courts have higher investment costs especially in treatment services. However, savings associated with victim and criminal justice system costs are greater due to fewer crimes, rearrests and incarceration. Drug courts that target offenders with high criminogenic risk and high substance abuse treatment need yield the most effective interventions and maximize return on investment.

BJA and NIJ’s joint Adult Drug Court Research to Practice (R2P) Initiative promotes the timely dissemination of information emerging from research on addiction science, substance abuse treatment and drug court programs. The project awarded to the National Center for State Courts and American University produces webinars, webcasts and other research dissemination to practitioners, policymakers and other stakeholders.
